[1:01 p.m. EST]

1  
2  
3 DR. HOWERTON: Thank you. Good afternoon  
4 and welcome to the December 13th, 2022 meeting of  
5 the PCORI Board of Governors. My name is Russ  
6 Howerton, Chairperson, and I would like to welcome  
7 everyone who has joined us for today's board  
8 meeting. We are pleased that you are here.

9 I would like to take a brief moment and say  
10 that I am honored and humbled in this, my first  
11 board meeting as the chairperson, to serve and help  
12 provide leadership for such an accomplished group of  
13 individuals as these Board members. It is truly an  
14 exciting time for PCORI, and we are blessed to have  
15 all of you as our leaders and Board members.

16 Before we proceed with our further  
17 business, on behalf of the continuing Board members  
18 and staff, I would like to give a warm welcome to  
19 our six new Board members. I think we have -- thank  
20 you for the next slide. Who were appointed by the  
21 GAO in September of this year, 2022: Chris Boone,  
22 Ryan Bradley, Zoher Ghogawala, Kimberly Richardson,

B&B REPORTERS  
29999 W. Barrier Reef Boulevard  
Lewes, DE 19958  
[302] 947-9541

1 Debbie Peikes, and Christopher White.

2 They bring remarkable expertise and  
3 experience and varied perspectives that will be  
4 invaluable to us as we work to advance PCORI's  
5 missions. Welcome again. We look forward to  
6 working with you.

7 Maureen, will you call the roll, please?

8 MS. THOMPSON: Yes. Thank you. Kara  
9 Ayers.

10 DR. AYERS: Present.

11 MS. THOMPSON: Kate Berry.

12 MS. BERRY: Present.

13 MS. THOMPSON: Christopher Boone.

14 [No response.]

15 MS. THOMPSON: Ryan Bradley.

16 DR. BRADLEY: Present.

17 MS. THOMPSON: Jen DeVoe.

18 DR. DEVOE: I'm here. Sorry.

19 MS. THOMPSON: Thank you, Jen. Alicia  
20 Fernandez.

21 DR. FERNANDEZ: Present.

22 MS. THOMPSON: Chris Friese.

1 [No response.]  
2 MS. THOMPSON: Zoher Ghogawala.  
3 [No response.]  
4 MS. THOMPSON: Mike Herndon.  
5 [No response.]  
6 MS. THOMPSON: Russell Howerton.  
7 DR. HOWERTON: Present.  
8 MS. THOMPSON: James Huffman.  
9 MR. HUFFMAN: Present.  
10 MS. THOMPSON: Connie Hwang.  
11 DR. HWANG: Present.  
12 MS. THOMPSON: Barbara McNeil.  
13 DR. McNEIL: Present.  
14 MS. THOMPSON: Debbie Peikes.  
15 DR. PEIKES: Present.  
16 MS. THOMPSON: Eboni Price-Haywood.  
17 DR. PRICE-HAYWOOD: Present.  
18 MS. THOMPSON: Kimberly Richardson.  
19 MS. RICHARDSON: Present.  
20 MS. THOMPSON: James Schuster.  
21 DR. SCHUSTER: Present.  
22 MS. THOMPSON: NIH Director Larry Tabak or

B&B REPORTERS

Lewes, DE 19958  
[302] 947-9541

1 Michael Lauer, designee for the NIH Director.

2 DR. TABAK: Present.

3 MS. THOMPSON: Kathleen Troeger.

4 [No response.]

5 MS. THOMPSON: AHRQ Director Robert Valdez  
6 or Karin Rhodes, designee for the AHRQ Director.

7 DR. VALDEZ: Present.

8 MS. THOMPSON: Danny Van Lewin.

9 MR. VAN LEEUWEN: Present.

10 MS. THOMPSON: Christopher White.

11 MR. WHITE: Present.

12 MS. THOMPSON: Christopher, thank you. And  
13 Janet Woodcock.

14 [No response.]

15 MS. THOMPSON: And we have a quorum.

16 DR. HOWERTON: Thank you. As a reminder,  
17 Board members' conflict of interest disclosures are  
18 publicly available on PCORI's website and are  
19 required to be updated annually. In fact, Board  
20 members, tomorrow you'll receive an email asking you  
21 to complete the annual update of your conflict-of-  
22 interest disclosures.

1           Please complete your annual updates before  
2 January 31st, 2023.

3           Board members are also reminded to update  
4 their conflict-of-interest disclosures at any point  
5 in time when the information would change throughout  
6 the year. If the Board will deliberate or act on a  
7 matter that presents a conflict of interest for you,  
8 please recuse yourself or inform me if you have  
9 questions. If you have questions about disclosures  
10 or recusals relating to you or others, please  
11 contact your staff representative.

12           Today's meeting is being recorded.

13           The agenda for today's meeting, along with  
14 the approved minutes from the Board's prior meeting  
15 and an archived webinar will be posted on PCORI's  
16 website within a week. Board members please  
17 remember to raise your hand if you wish to speak and  
18 identify yourself before making a comment.

19           Our agenda today includes approving prior  
20 meeting minutes, as well as items for approval to  
21 include implementation of new governance frameworks  
22 related to our Governance Work Group, as well as

B&B REPORTERS  
29999 W. Barrier Reef Boulevard  
Lewes, DE 19958  
[302] 947-9541

1 considering for approval our fiscal year 2023 to  
2 2025 commitment plan. We will hear an update from  
3 the Healthcare Cost and Value Work Group, as well as  
4 review our end-of-year dashboard and hear about the  
5 latest editions to PCORI's portfolio of funded  
6 awards. And then we hope to wrap up and adjourn on  
7 time.

8 I would ask you, as Board members, to keep  
9 us informed about your attendance at the meeting we  
10 have, as mentioned, two voice votes in a roll call  
11 vote and we'll need to keep close track of  
12 attendance.

13 With that, I would like to introduce the  
14 first item of business, which is to consider  
15 approval of the minutes from the September 20th,  
16 2022 board meeting. Are there any corrections,  
17 additions, or subtraction to these minutes that you  
18 received in your packet? Please raise your hand if  
19 you wish to speak, and identify yourself before  
20 making a comment or a motion.

21 [No response.]

22 DR. HOWERTON: Hearing none, is there a --

1 DR. VALDEZ: I move approval of the  
2 minutes.

3 DR. HOWERTON: That was Danny, I believe.  
4 Or did I mishear that?

5 DR. VALDEZ: Bob Valdez.

6 DR. HOWERTON: Bob. Okay. And is there a  
7 second?

8 DR. SCHUSTER: James.

9 DR. HOWERTON: James. All those in favor  
10 say aye.

11 [Ayes.]

12 DR. HOWERTON: Any in opposition or  
13 abstention? All right.

14 DR. BRADLEY: I'll abstain, I wasn't  
15 present.

16 DR. HOWERTON: Okay. Who was that? I'm  
17 sorry, I missed that.

18 DR. BRADLEY: That was Ryan Bradley.

19 DR. HOWERTON: Ryan. Okay. I just wanted  
20 that so we could mark that down. Thank you.  
21 Entirely appropriate.

22 All right. I would now like to take us to

1 the next agenda item. If you could advance the  
2 slides, please. And that is, relates to  
3 implementation of a board-approved governance  
4 framework.

5 As Board chairperson, I also serve as the  
6 chair of the Governance Committee; in this capacity,  
7 I will introduce the next agenda item.

8 The Board will now consider approving a  
9 number of proposed amended and new governance  
10 documents to implement the new governance framework  
11 that the Board approved at its September 2022  
12 meeting.

13 Could I have the next slide, please?

14 At our September 2022 meeting, the Board  
15 approved a new governance framework to enhance our  
16 ability to advance PCORI's new strategic plan, to  
17 provide strategic oversight, to leverage the full  
18 board's input on strategic issues, to enable PCORI's  
19 staff to implement and lead PCORI's programs, and to  
20 meet PCORI's needs for advancing our mission.

21 The approved governance framework includes  
22 a number of key elements, including retaining

1 essential standing committees, creating a new  
2 Strategy Committee, expanding the current Standing  
3 Selection Committee to include consideration of  
4 additional award types, incorporating ad hoc work  
5 groups into the governance framework, pausing  
6 convenings of three standing strategic committees  
7 tied to PCORI's previous strategic plan, those being  
8 the Engagement, Dissemination, and Implementation  
9 Committee, the Research Transformation Committee,  
10 and the Science Oversight Committee; and assessing  
11 the new governance framework.

12           The Governance Committee has considered how  
13 to implement the approved new governance framework  
14 and is recommending that the Board approve a package  
15 of proposed new and amended governance documents.  
16 The package of documents also includes revised  
17 governance documents reflecting recommendations of  
18 the Finance and Administration Committee.

19           Mary Hennessey, PCORI's General Counsel,  
20 will outline key elements of the proposed new and  
21 amended governance documents to implement the  
22 approved governance framework. Mary.

1 MS. HENNESSEY: Thanks so much, Russ. I  
2 appreciate it. Why don't we move to the next slide,  
3 and I think I'll just focus on some of the key  
4 governance documents that will serve to implement  
5 the Board's approved framework.

6 So there are a number of different  
7 committee charters, some of which are new, some of  
8 which are revised, as reflected here. Additionally,  
9 the Board will consider amending PCORI's bylaws,  
10 which function as the Board and PCORI's  
11 constitution. There'll be new committee charters  
12 such as the new Nominating Committee for members of  
13 the Methodology Committee, and there'll be some  
14 actions relating to amending certain policies.

15 Why don't we go to the next slide?

16 I want to highlight some of the key  
17 elements in the proposed documents that the Board  
18 will consider as part of the package. One is the  
19 new charter for the Strategy Committee. This  
20 charter reflects that the key responsibilities of  
21 this new committee will be to consider various  
22 strategic issues as assigned by the Board or Board

1 chairperson, which will support the Board's desire  
2 for the Board to be the primary body that will  
3 consider strategic issues.

4           Additionally, the Standing Selection  
5 Committee charter is revised to recognize that it  
6 will consider slates of awards from all programmatic  
7 award initiatives. And likewise, there will be an  
8 ability for special selection committees to be  
9 formed to address specialized needs, timing needs,  
10 et cetera. And so, this standing committee with the  
11 opportunity to form special committees will enable  
12 this structure to be able to proceed to meet PCORI's  
13 needs based on its award cycles.

14           Why don't we move to the next slide?

15           So the Governance Committee charter that  
16 the Board will be considering as part of the  
17 package, similar to other committees, makes standard  
18 the number of Board members that can serve on a  
19 standing committee. There's also some revisions  
20 that in making nominations to committees, the  
21 Governance Committee should take into account the  
22 needs of PCORI and committees, length of service on

1 the Board and on committees, and other  
2 considerations recognizing that the Governance  
3 Committee should be attentive to meeting the needs  
4 of committees and not necessarily making automatic  
5 re-nominations.

6 The Finance and Administration Committee,  
7 similar to the other charters, has an increased  
8 composition of maximum number of Board members to  
9 increase consistency in committee structure.

10 The Executive Committee, which functions as  
11 a governance tool of the Board, to be available if  
12 needed to act on behalf of the Board in urgent  
13 situations. That committee charter is revised to  
14 reflect an updated composition based on the ex  
15 officio committee leadership status that will serve  
16 as the ex officio members of the Executive  
17 Committee. And thus, the Board chairperson, Board  
18 vice chairperson, chair of FAC, Governance  
19 Committee, continue to be members.

20 And now with the new standing committees  
21 approved by the Board, the Standing Selection  
22 Committee and the Strategy Committee chairs will

1 also serve as ex officio members of the Executive  
2 Committee.

3 Next slide, please.

4 There's also a new charter to recognize a  
5 committee that will be charged with making  
6 nominations, slates of nominations to the Board for  
7 appointment to the Methodology Committee. This will  
8 be a standing committee, but it will really only be  
9 convened based on cycles of appointments that are  
10 needed for the Methodology Committee.

11 The membership will include a combination  
12 of Board members, senior staff members and  
13 Methodology Committee members.

14 And in recognition of the need to maintain  
15 flexibility in convening this committee, the Board  
16 chairperson will be responsible for convening and  
17 appointing the committee.

18 As part of the governance structure, it was  
19 recognized that service on work groups and the use  
20 of ad hoc work groups is an important component of  
21 the tools available to the Board for addressing a  
22 variety of issues. And so, the compensation policy

1 for Board members and Methodology Committee members  
2 includes revisions to clarify that service on these  
3 committees will be compensated consistent with  
4 service on committees.

5           Likewise, in reviewing the experience with  
6 work group service in the immediate past, it was  
7 recognized that while appropriately work group  
8 members had been compensated, the work group  
9 leadership had not been compensated consistent with  
10 their responsibilities and commitments. And thus,  
11 it is recommended by the Finance and Administration  
12 Committee that this implementation of this policy,  
13 at least with respect to chairs and vice chairs of  
14 work groups, be retroactive to the beginning of the  
15 service on the work groups.

16           Next slide, please.

17           There are some additional governance  
18 changes in other governing documents. It's  
19 important to recognize that the bylaws are proposed  
20 to amendments to make conforming changes for  
21 sections relating to committees to align with the  
22 charter revisions and new charters that I just

1 explained previously.

2           There's also language that recognizes that  
3 the historic three strategic committees: EDIC, RTC,  
4 and SOC, are to be paused. And thus, the governance  
5 language that is used for amended language in the  
6 bylaws is that these committees may only be convened  
7 upon the authorization of the Board. The bylaws  
8 also now explicitly refer to working groups to  
9 recognize the significance of the working group  
10 opportunity for the Board.

11           There's one policy, the Award Project  
12 Budget Increased Policy, that is an historic policy  
13 that was identified as needing to be addressed as a  
14 result of the Board's prior approval in June of a  
15 revised authority structure for the approval of  
16 slates of awards.

17           And just to remind everybody, at that time  
18 the Board revised the authority structure so that it  
19 is the Executive Director who holds the authority to  
20 approve slates of awards rather than the Board.  
21 Following the Board's approval of that revised  
22 authority structure, we reviewed a variety of

1 policies and documents to consider how to adapt them  
2 to the Board's revised structure and have identified  
3 this policy, which is a Board-approved policy, as  
4 now outdated because it's premised on an authority  
5 structure that is now no longer in place. And thus,  
6 it is recommended that this policy be sunset by the  
7 Board as a Board-approved policy.

8           So, Russ, I'm happy to address any  
9 questions. I'm happy to pass it back to you to  
10 consider whether there are any comments or questions  
11 from the Board. Thank you.

12           DR. HOWERTON: Thank you, Mary. The floor  
13 is now open for discussion, comments, and questions.

14           Board members, please remember to raise  
15 your hand if you wish to speak and identify yourself  
16 before speaking and or making a motion.

17           I'm looking. Maureen, are there hands up  
18 that I am missing?

19           MS. THOMPSON: I do not see any hands up.

20           DR. HOWERTON: Well, perhaps we could  
21 advance to the next slide, please.

22           The proposed motion is that the Board

1 approve the following: the proposed new Strategy  
2 Committee charter, the proposed amendments to the  
3 Selection Committee charter, the Governance  
4 Committee charter, the Executive Committee charter,  
5 the Finance and Administration Committee charter,  
6 the Board and Methodology Committee Compensation and  
7 Reimbursement Policy to include implementation of  
8 the compensation and reimbursement policy relating  
9 to chairs and vice chairs of work groups to be  
10 effective retroactively as of the beginning of their  
11 service on prior and existing work groups, and PCORI  
12 bylaws, as well the proposed new Nominating  
13 Committee for members of the Methodology Committee  
14 charter, and the sunset of the Award Project Budget  
15 Increase Policy as a Board-approved policy.

16 Before asking someone to move the proposed  
17 motion. I will ask Maureen to let us know if there  
18 are any updates to attendance.

19 MS. THOMPSON: Yes, Dr. Howerton, Chris  
20 Boone has joined the meeting.

21 DR. HOWERTON: Thank you and welcome.

22 Is there a first for the proposed motion?

1 DR. McNEIL: So moved.

2 DR. HOWERTON: Okay. And I think that was  
3 Barbara. Am I correct in that?

4 DR. McNEIL: It was Russ. It was Barbara.

5 DR. HOWERTON: And is there a second for  
6 the proposed motion?

7 DR. VALDEZ: Bob Valdez.

8 DR. SCHUSTER: James.

9 DR. VALDEZ: Second.

10 DR. HOWERTON: So I think I heard James  
11 first. Was that correct, Maureen? Or I'll defer to  
12 your judgment.

13 MS. THOMPSON: I thought I heard Robert  
14 Valdez first and then James, but --

15 DR. HOWERTON: All right. We'll take  
16 Robert then. Thank you.

17 This vote will be by roll call, since the  
18 amendments to the bylaws require a two-thirds vote  
19 of the Board, which must be documented. Maureen,  
20 will you please lead us through the roll call vote?

21 MS. THOMPSON: Thank you, Dr. Howerton.

22 Board members, when I call your name,

1 please say yes if you are in favor of the motion.  
2 No, if you are opposed to the motion. Abstain, if  
3 you elect to abstain from voting on the motion.

4 Kara Ayers.

5 DR. AYERS: Yes.

6 MS. THOMPSON: Kate Berry.

7 MS. BERRY: Yes.

8 MS. THOMPSON: Christopher Boone.

9 DR. BOONE: Yes.

10 MS. THOMPSON: Ryan Bradley.

11 DR. BRADLEY: Yes.

12 MS. THOMPSON: Jennifer DeVoe.

13 DR. DEVOE: Yes.

14 MS. THOMPSON: Yes.

15 MS. THOMPSON: Chris Friese.

16 [No response.]

17 MS. THOMPSON: Zoher Ghogawala.

18 DR. GHOGAWALA: Yes.

19 MS. THOMPSON: Mike Herndon.

20 [No response.]

21 MS. THOMPSON: Russell Howerton.

22 DR. HOWERTON: Yes.

1 MS. THOMPSON: James Huffman.  
2 MR. HUFFMAN: Yes.  
3 MS. THOMPSON: Connie Hwang.  
4 DR. HWANG: Yes.  
5 MS. THOMPSON: Barbara McNeil.  
6 DR. McNEIL: Yes.  
7 MS. THOMPSON: Debbie Peikes.  
8 DR. PEIKES: Yes.  
9 MS. THOMPSON: Eboni Price-Haywood.  
10 DR. PRICE-HAYWOOD: Yes.  
11 MS. THOMPSON: Kimberly Richardson.  
12 MS. RICHARDSON: Yes.  
13 MS. THOMPSON: James Schuster.  
14 DR. SCHUSTER: Yes.  
15 MS. THOMPSON: NIH Director Larry Tabak or  
16 Michael Lauer, designee for the NIH Director.  
17 DR. TABAK: Yes.  
18 MS. THOMPSON: Kathleen Troeger.  
19 MS. TROEGER: Approve.  
20 MS. THOMPSON: AHRQ Director Robert Valdez.  
21 DR. VALDEZ: Yes.  
22 MS. THOMPSON: Danny Van Lewin.

1 MR. VAN LEEUWEN: Approve.

2 MS. THOMPSON: Christopher White.

3 MR. WHITE: Yes.

4 MS. THOMPSON: Janet Woodcock.

5 [No response.]

6 MS. THOMPSON: Dr. Howerton, all votes are  
7 in favor of the motion.

8 DR. HOWERTON: Thank you very much. This  
9 is an important step in our evolution of our  
10 governance framework.

11 I would remind Board members to turn off  
12 your microphones if you had them on while you were  
13 speaking as we move to the next presentation.

14 I now would like -- if you could advance  
15 the slides, move to our next agenda item. I would  
16 invite James Huffman, chair of the Finance and  
17 Administration Committee to introduce the next  
18 agenda item about the proposed fiscal year 2023 to  
19 fiscal year 2025 commitment plan, which I believe  
20 will be presented by Brian Trent, PCORI's Deputy  
21 Executive Director for Operations. Jim.

22 MR. HUFFMAN: Thank you, Russ.

1           The FAC had the opportunity to review the  
2 proposed commitment plan for fiscal year 2023  
3 through fiscal 2025 at its meeting on November 29th,  
4 and recommends it for the Board's approval. The  
5 three-year proposed commitment plan continues to  
6 align with the Board-approved model for commitment  
7 planning.

8           I will now ask Brian to walk us through the  
9 commitment plan presentation.

10           MR. TRENT: Thank you, Jim.

11           Previously, the Board approved both the  
12 long-range funding model for commitment planning and  
13 a rolling three-year commitment plan subject to  
14 annual review and update by the Board.

15           In September, the Board approved the PCORI  
16 fiscal year '23 budget for expense. The fiscal year  
17 '23 budget includes expenses on awards and operating  
18 expenses. Today we're asking the Board to consider  
19 for approval PCORI's three-year commitment plan for  
20 fiscal year '23 through fiscal year '25, commitments  
21 represent the amount of funding that PCORI intends  
22 to award.

1           For the updated commitment plan, we're  
2 recommending that our overall targets remain  
3 unchanged for fiscal years '23 and '24. The fiscal  
4 year '25 target reflects an increase from the  
5 original Board-approved long-range model up to \$600  
6 million, which was made possible by adding  
7 uncommitted funds planned for fiscal year '22 to the  
8 FY '25 plan.

9           On the slide that's currently in front of  
10 you is a recap of the commitment planning model that  
11 the Board approved in December of 2020. Represented  
12 on this slide are yearly commitments from the past  
13 and projections for the future in this approach.

14           In the past, yearly commitments averaged  
15 \$388 million per year. The projections for this  
16 model show a front loading that peaks at about \$600  
17 million for overall commitments. The steady state  
18 period has a range of approximately \$340 million to  
19 \$440 million, which accounts for a low and high  
20 assumption about the PCOR fee, which could have some  
21 fluctuations over the years.

22           Next slide, please.

1           This slide compares our fiscal year '22  
2 actual commitments compared to our target of \$600  
3 million. As you can see, we fell short of our  
4 target for fiscal year '22. Some of the reasons for  
5 the shortfall are in the area of research and D&I.  
6 We fell short due to the lingering effects of the  
7 COVID-19 pandemic, fewer than anticipated  
8 applications, and ongoing attention being paid to  
9 COVID-19 enhancements.

10           In the area of infrastructure, we were  
11 under the target because of the planned shift for  
12 funding to follow establishment of the PCORnet  
13 strategic direction and having fewer than initially  
14 anticipated engagement awards.

15           For new initiatives, funds were committed  
16 to a new opportunity to fund a large workforce  
17 project with AHRQ.

18           Next slide, please.

19           On this slide is a breakdown of the three-  
20 year commitment plan by the four large funding  
21 categories. In the plan that the Board approved  
22 last year, research was targeted to remain steady at

1 \$500 million annually, while there was a targeted  
2 increase in dissemination and implementation and a  
3 decrease in infrastructure.

4 Next slide, please. I think there's one  
5 slide after that.

6 DR. McNEIL: Excuse me. Am I the only one  
7 who can't hear you well?

8 DR. TABAK: I hear Brian very well.

9 DR. McNEIL: Oh, it must be me.

10 MR. TRENT: I think we're going back to,  
11 there's a slide that we skipped. So if you could go  
12 back to -- there's -- okay, we're fine there. So  
13 for the -- sorry, I apologize. I think we went  
14 ahead on one the slides.

15 [Telephone ringing interference.]

16 MR. TRENT: So, as I mentioned on this  
17 slide is a breakdown of the three-year commitment  
18 plan by the four large funding categories. In the  
19 plan that the Board approved last year, research was  
20 targeted to remain steady at \$500 million annually  
21 while there is a targeted increase in dissemination  
22 and implementation and a decrease in Infrastructure.

1           Next slide, please.

2           For the annual commitment plan update, we  
3 are proposing to continue the same approach for  
4 fiscal year '23 and fiscal year '24 that was  
5 previously reviewed by the Board. For fiscal year  
6 '25, we propose rolling over the shortfall from the  
7 fiscal year '22 target, extending the peak in the  
8 multi-year plan by increasing our fiscal year '25  
9 commitments by \$100 million.

10           Under this plan, research represents a  
11 balance of broad and focused funding opportunities,  
12 full range of study types and projects to address  
13 short and long-term needs. We'll continue to launch  
14 a range of PFAs in each cycle many more than in  
15 previous years. Eleven targeted PFAs in fiscal year  
16 '22 will result in commitments in fiscal year '23.

17           The plan includes a significant increase  
18 over fiscal year '22 actual commitments to meet  
19 dissemination and implementation targets in fiscal  
20 years '23 to '25. It includes activities related to  
21 D&I results from PCORI-funded studies. The plan  
22 anticipates an increased number of D&I worthy awards

1 from larger research investments, and the plan  
2 anticipates initial Health Systems Implementation  
3 Initiative Awards to move to the next phase.

4           It should be noted that the dissemination  
5 and implementation line does not represent the full  
6 extent of our investment in D&I. This line  
7 demonstrates the commitment for D&I awards that take  
8 PCORI-funded studies to the next step. Research  
9 awards focused on health communications,  
10 dissemination, and implementation research are  
11 represented on the research line.

12           In the area of infrastructure, this  
13 includes Engagement Awards, Workforce, and PCORnet  
14 Infrastructure Awards.

15           Maintenance costs of PCORnet infrastructure  
16 in Phase 4 funding is anticipated to land in fiscal  
17 years '25 and '26, with \$50 million included as a  
18 placeholder for PCORnet infrastructure funding in  
19 fiscal year '25, which would follow the Board's  
20 consideration for approval of development of funding  
21 initiatives for Phase 4.

22           For new initiatives, this includes the

B&B REPORTERS  
29999 W. Barrier Reef Boulevard  
Lewes, DE 19958  
[302] 947-9541

1 potential for new initiatives that are not yet  
2 anticipated and \$10 million for the Executive Rapid  
3 Response Funding. Next slide, please.

4           So for today, we're asking the Board to  
5 consider for approval the fiscal year '23 through  
6 fiscal year '25 commitment plan, which includes  
7 maintaining the plan increase in the fiscal year '23  
8 target for D&I, and decreasing the targets for  
9 infrastructure, increasing the fiscal year '25  
10 target from \$500 million reflected in the long-term  
11 model to \$600 million using the uncommitted funds  
12 originally targeted for fiscal year '22, which would  
13 increase the fiscal year '25 target for research  
14 from \$400 million to \$460 million, anticipating an  
15 increase in the fiscal year '25 targets for  
16 infrastructure as we plan the PCORnet Phase 4  
17 commitments, which we anticipate will occur in this  
18 timeframe following Board consideration for approval  
19 for development.

20           In the upcoming months, we hope to have  
21 strategic discussions with the Board on future  
22 commitment planning, including adjustments to the

B&B REPORTERS  
29999 W. Barrier Reef Boulevard  
Lewes, DE 19958  
[302] 947-9541

1 model which was approved in December 2020. We also  
2 want to have discussions on potentially changing the  
3 timeframe for approving the commitment plan.

4 And finally, there may be additional  
5 strategic discussions that the Board would like to  
6 have regarding the commitment plan.

7 So we look forward to hearing from you  
8 today regarding any additional areas of interest for  
9 discussion at future Board meetings. And with that,  
10 I'd like to turn it back over to you, Russ, for any  
11 questions and discussions.

12 And I apologize, there was a slight mix up  
13 with my talking points in the slides, so I apologize  
14 for that.

15 DR. DEVOE: Thanks so much Brian and James.  
16 I'm going to take over for Russ. He had another  
17 call come in that he's attending to.

18 So I just want to remind people to raise  
19 your hand and we'll go ahead and have any questions  
20 or discussion at this time.

21 Ms. THOMPSON: And Jen, I see that Zoher  
22 has a question.

1 DR. DEVOE: Great. I saw Zoher's hand up  
2 and then I saw you Danny, after Zoher.

3 DR. GHOGAWALA: Hi, can you hear me?

4 DR. DEVOE: Yep, we can hear you.

5 DR. GHOGAWALA: Terrific. This may just  
6 reflect my lack of understanding about the plan  
7 here, but what I've seen here is a request to go to  
8 \$600 million, but the new initiatives is \$50 million  
9 and it says on the slide up to 650. And I'm just  
10 not understanding why the request isn't to just say  
11 650, as opposed to 600.

12 MR. TRENT: Because the new initiatives,  
13 once they are determined and we know what they are,  
14 they will be reflected in the three categories.  
15 Right now we don't know what those initiatives are,  
16 and so once we determine what they will be, they  
17 will be factored in and that will make the total,  
18 that would make the total potentially \$650 million.

19 DR. GHOGAWALA: Thank you.

20 DR. COOK: If I may add one point to that,  
21 which is that, you know, back in 2020 when this  
22 multi-year commitment plan was developed, the idea

1 was to set some very ambitious targets that PCORI  
2 would strive to achieve with that early upfront  
3 investment. And the idea of the new initiatives  
4 wasn't necessarily to be part of the target per se,  
5 but to say if there was an opportunity for something  
6 we wanted to make sure, the Board wanted to make  
7 sure, that PCORI had the flexibility to consider it  
8 even if it went beyond the \$600 million.

9 And so, that was the construct back then  
10 when it was developed in that way.

11 DR. GHOGAWALA: Thanks. That helps a lot.  
12 Thank you.

13 DR. DEVOE: Russ is back, I think Danny's  
14 up next and I'll turn the meeting back over to Russ.

15 DR. HOWERTON: Thank you Jen for carrying.

16 MR. VAN LEEUWEN: Well, thank you. So I  
17 guess I need to go back to better understanding the  
18 decrease for infrastructure. It went quickly for me  
19 and I don't remember seeing this before.

20 So anyway, could we go back and one more  
21 time walk through what's happening with the  
22 infrastructure and why we're decreasing it?

1 DR. HOWERTON: Brian, have you got that?

2 MR. TRENT: Yes. I don't know if we wanted  
3 to go back to the actual slide.

4 MR. VAN LEEUWEN: That would be great.  
5 Thank you.

6 AMY: Brian, this is Amy. Which slide do  
7 you need me to go back to?

8 MR. TRENT: Danny, is this the slide that  
9 you were referencing?

10 MR. VAN LEEUWEN: It's -- the changes are  
11 happening slow on my end. I'm still looking at the  
12 same summary and next step slide. It might take a  
13 couple minutes. There's a lag.

14 DR. COOK: This may be the one, the recap  
15 from the prior years.

16 DR. HOWERTON: Yeah, it may have also -- I  
17 think Brian, since Danny can't see this, just --

18 MR. VAN LEEUWEN: No, I'm seeing annual  
19 review. Oh, here. Recap. Yeah, so infrastructure.  
20 I see Engagement Awards, Infrastructure Awards,  
21 Workforce Awards.

22 So are we saying -- like, what are we

1 decreasing? Are we decreasing Engagement? PCORnet?  
2 workforce? Why?

3 DR. COOK: I'm happy to jump in here,  
4 Danny, and just relate a little bit in terms of the  
5 way things were planned. There was a planned amount  
6 related to PCORnet that related to the funding of  
7 the PCORnet Clinical Coordinating Center and  
8 clinical research networks that occurred and caused  
9 a bump in funding over the years of 2021 and 2022.

10 And what you're seeing is that after that  
11 commitment was made, it came back to the \$40 million  
12 for infrastructure that was estimated. So this is  
13 following that known and planned kind of increase  
14 that was necessary for the Phase 3 awards for  
15 PCORnet.

16 MR. VAN LEEUWEN: So one of the things that  
17 we've talked about in terms of PCORnet is expanding  
18 how PCORnet incorporates patient recorded data in  
19 the common data model or however it does it. And I  
20 want to make sure that our funding, that we are  
21 continuing to prioritize and fund that important  
22 shift away from not just, you know, claims and EHR

1 clinical data. So is there, maybe I'm talking  
2 apples and oranges and I just need to be reoriented,  
3 I just want to make sure we're not lessening our  
4 investment in that process.

5 DR. COOK: That's correct, Danny. That is  
6 not necessarily lessening the investment and the,  
7 what at the time I think was called the additional  
8 enhancements that may come to infrastructure, which  
9 related to the potential opportunities for  
10 connection of data and aggregation of data that may  
11 be outside of the current infrastructure, as well as  
12 the opportunity, as you may recall, to expand for  
13 populations that may not have been included.

14 And so, those efforts were underway in  
15 terms of understanding stakeholder input, et cetera,  
16 that would guide those types of opportunities. And  
17 there was, in the earlier commitment plan multi-year  
18 model, a plan for that, that still remains.

19 MR. VAN LEEUWEN: Okay.

20 DR. COOK: So what you're just seeing is  
21 that that initial bump for Phase 3 awards came back  
22 down, but the other activities are still included in

1 the planned phases here.

2 MR. VAN LEEUWEN: And Engagement and  
3 Workforce hasn't changed. It's just that bump?

4 DR. COOK: That's correct. That's correct.

5 MR. VAN LEEUWEN: Okay. Thank you.

6 DR. HOWERTON: Connie, do you have a  
7 question next? And then I see Ryan's hand going up.

8 DR. HWANG: I do. Thanks, Russ. And  
9 Brent, thank you for laying out all these funding  
10 targets.

11 So one of the things I think is really  
12 distinctive about PCORI is focusing investment in  
13 dissemination and implementation. And in looking at  
14 some of the numbers in the charts here it looked  
15 like whereas there was a goal for \$40 million in  
16 spend, maybe 16 million was the actual, and I am in  
17 full support of continued growth in, you know,  
18 funding that dissemination and implementation at \$60  
19 million.

20 I just wanted to pose the question about  
21 what do we feel that PCORI is going to lean into to  
22 essentially increase that spend by a factor of four

1 to reach target?

2 I think that it is a very worthwhile area  
3 and also just wondering where, we, as the Board,  
4 could be helpful throughout the upcoming year to  
5 help us sort of reach that goal. I think, you know,  
6 again, an important area, but it does seem like a  
7 large jump from where we are from actual to target  
8 in 2023.

9 DR. COOK: And Connie, were you  
10 specifically referring to the \$40 million to \$60  
11 million transition?

12 DR. HWANG: Yes. And I think if I, and  
13 please correct me if I'm wrong, but I think the  
14 fiscal year 2023 target there, I think there was in  
15 some previous was the actuals, was around \$16  
16 million. I don't know if I've gotten that wrong,  
17 let me know.

18 But yes, interested in, because I think one  
19 of the questions was do we approve of the continued,  
20 you know, increase in that or the goal? And I do.  
21 I just want to understand if we're really at a \$16  
22 million spend, you know, where do we see the

1 opportunities to get to that new level?

2 DR. COOK: I'm going to mention a few  
3 things and also ask if Harv Feldman or Greg Martin  
4 wants to chime in here, but one of the things that  
5 we had anticipated is that there were several  
6 initiatives that were just getting started that will  
7 actually have funding lines come into play in the  
8 future years. Particularly, as Brian mentioned, the  
9 Health Systems Implementation Initiative, which was  
10 more of a phased award.

11 And so, the awards that actually will be  
12 funding commitments will be hitting the lines that  
13 you see coming later in 2023 and 2024. Whereas the  
14 partnership component, which wasn't really a funding  
15 commitment, was what we were working on in 2022. So  
16 there's these kinds of activities that we know have  
17 tails that will actually start to bump things up.

18 But I think there's probably some  
19 additional comments Harv may want to make.

20 So Harv, did you want to say anything about  
21 the increase we're anticipating related to  
22 dissemination and implementation?

1 DR. FELDMAN: Yeah, thanks Nakela. You  
2 know, so in addition to the anticipated activities  
3 in the next phases of the HSII program, we also are  
4 anticipating the increase in dissemination  
5 opportunities as so many of our prior funded CER  
6 activities have come to fruition and completion and  
7 will be able to actually be ready to move into an  
8 implementation phase. And so, that was also another  
9 part of our thinking and planning and, you know,  
10 bringing forward the proposal in this way for the  
11 Board so that we are able in fact, to pursue that  
12 component of the life cycle of what it is that we  
13 fund.

14 DR. COOK: And I'll just ask if there was  
15 anything else, Greg, you wanted to add. I saw you  
16 there on camera.

17 MR. MARTIN: No, I think those are both  
18 excellent points. And, you know, I think that we're  
19 all very excited about what the next few years are  
20 going to bring relative to this new implementation  
21 initiative of HSII, the increased amount of evidence  
22 that the early years investments are now producing,

1 as well as the increasing bandwidth that we're  
2 seeing within the sites that are the implementation  
3 sites of awards to be able to start participating in  
4 applications again --

5 DR. HWANG: Great. Well, thank you.

6 Greg, I think that's terrific. I am a huge  
7 fan of the HSII initiative. I'm excited for that to  
8 expand. I just, yeah, like I said, looking at that  
9 sort of 4X gap, I thought, well, you know, if  
10 there's anything else that we could be helpful with  
11 throughout the year in, you know, as you said, more  
12 studies are coming online and make awareness there.  
13 I just, you know, anytime there's a jump like that,  
14 it just, I think it does require some other,  
15 potentially some concerted effort, further concerted  
16 effort, but very hopeful. That's great.

17 DR. HOWERTON: All right. Thank you. I  
18 think, Ryan, are you next with a question?

19 DR. BRADLEY: I think Robert actually had  
20 his hand up prior.

21 DR. HOWERTON: Okay. Robert, you go first  
22 and then it'll be Ryan.

1 DR. VALDEZ: I just wanted to follow up on  
2 that. You know AHRQ is funded through the trust  
3 fund to do dissemination and implementation as well  
4 as training. And so, as we've geared up our  
5 dissemination and implementation efforts, there'll  
6 be new opportunities for collaborations directly  
7 with PCORI that I'm looking forward to having Harv  
8 and others discuss with our staff. So there's  
9 really no shortage of opportunities, I think, in the  
10 coming years to really focus on this really  
11 important area of dissemination, and particularly  
12 the implementation phase, which is often ignored.

13 DR. HOWERTON: Thank you. Ryan, do you  
14 have a question?

15 DR. BRADLEY: I do, briefly. My question  
16 or comment was actually very similar to Connie's,  
17 but it seemed like multiple categories were  
18 underspent, if you will. And so, I don't have any  
19 comments or questions related to the proposed  
20 allocations. I trust the experience of past Board  
21 members in making those determinations.

22 But there was some attribution given to

1 some of the reasons why funding was, you know,  
2 there's some underspending in multiple categories,  
3 including fewer than expected applications.

4           And I'm just sort of curious, is that  
5 really true? Is it just an absolute reduction in  
6 numbers of applications or was the quality of  
7 applications lower and are more applications deemed  
8 non-meritorious enough to get support?

9           It just, it seems to me that we want to  
10 spend our allocations and if our application numbers  
11 are down, then some additional solicitations or  
12 other outreach to make sure that relevant  
13 investigators are fully aware of the viability of  
14 PCORI as a funding option for some of their work.  
15 Just increases its level of importance.

16           And similar to Connie, I'm just wondering  
17 if there's more that we can do as a board or an  
18 organization to, you know, make sure that we remain  
19 attractive for those applications.

20           MR. TRENT: I mean, I'll answer part of  
21 this and I'll turn the rest over to Nakela.

22           I think a large part of it was still in the

1 sort of recovery phase of COVID-19. A lot of the  
2 individuals who would have applied were sort of  
3 doing other things such as working on the COVID-19  
4 enhancements. And that led to, I think, a  
5 significant amount of our, the decreased number of  
6 applicants in that area, particularly in the  
7 research area.

8 And I'll turn it over to Nakela to answer  
9 that further.

10 DR. COOK: I'm also just going to allow  
11 Harv this space to respond here, given he's closest  
12 to some of this. And then, I'll happily wrap up.

13 DR. FELDMAN: Yeah. Thanks Nakela and  
14 Brian, and thanks for the question, Ryan. I think  
15 that it's already been covered, but I'll just  
16 emphasize it.

17 The impact of COVID-19 on our applicant  
18 pool was quite substantial and we saw it sort of  
19 come in in two ways. One is a diminished count  
20 number of applications during a period when we know,  
21 obviously, researchers and medical centers were  
22 responding to the crisis in all sorts of ways that

1 diminished their ability to apply for research  
2 funding. And we did, I think, also see some  
3 diminution in some of the quality of what we  
4 received as well, probably related to similar  
5 workforce issues out there in the world where our  
6 applications emanate from.

7 We fully anticipate, and I think are  
8 already beginning to see recovery there, as we've  
9 moved into a very different phase of the pandemic.

10 But I think it was definitely demonstrable  
11 and, you know, we think explains in a substantial  
12 way some of the patterns that we shared with you.

13 DR. COOK: Maybe the one piece I'll add to  
14 those both excellent responses, is that when we were  
15 looking at the commitments for fiscal year 2022,  
16 especially for our new Board members, I wanted to  
17 emphasize that those commitments are in response to  
18 funding announcements and applications that were  
19 typically coming in, in 2021. And so, there was a  
20 much closer proximity to some of the acuity of  
21 things that were happening related to COVID-19 at  
22 that time period.

1           So that time lapse I think, is also  
2 important in terms of understanding some of the  
3 target issues.

4           And then maybe the last thing I'll say is  
5 that, you know, we, in response to what we saw, as  
6 ambitious targets for us to meet, we geared up with  
7 a lot more announcements, as well as kind of an  
8 anticipated rebound, I think, from some of the early  
9 things we were seeing in the pandemic that we  
10 weren't able to see recover as quickly as we had  
11 anticipated. And so, that's why we mentioned it was  
12 a less than anticipated number of applications and  
13 ability to make awards because we really were hoping  
14 for something that would've been more robust in that  
15 time period. But it just didn't pan out in that  
16 way.

17           DR. BRADLEY: Thank you for the  
18 clarifications and I have one really what I hope is  
19 really quick follow up, if you don't mind. And it  
20 really has to do with if there's flexibility to  
21 reallocate amongst these categories and how that  
22 process would be pursued.

1           So, for example, I'm hearing COVID had a  
2 major impact on applications. Obviously, there was  
3 an enormous research need at the time from a wide  
4 variety of different areas of research in terms of,  
5 you know, what patients were doing, what centers  
6 were doing, you know, obviously efficacy and  
7 effectiveness of therapy. Was there consideration  
8 or is there flexibility in the structure to  
9 reallocate budget?

10           I see that we have the Executive Rapid  
11 Response Fund. But if we're seeing underspending in  
12 one category is there a process by which we can  
13 increase funding in in response to this type of  
14 emergency?

15           MR. TRENT: I would say that's sort of the  
16 part of the ongoing discussions we want to have with  
17 the Board to maybe adjust, you know, where we are  
18 making some of our commitments for fiscal years '23  
19 through '25.

20           And I'll let Nakela, if she wants to add  
21 anything to that.

22           DR. COOK: I'll just add that one of the

1 things that we were thinking about as we put forward  
2 this three-year kind of update with you, is that the  
3 Board has an opportunity to revisit this on a yearly  
4 basis. And so, we do have that opportunity to come  
5 back and talk further about the targets, et cetera,  
6 that we're trying to proceed with and the other  
7 piece that we thought is that this would be an  
8 opportunity for us to hear from all of you about  
9 those areas that you think we may want to go deeper  
10 in discussion together with before we get to that  
11 next three-year revisit of our approach.

12 And so, we wanted to collect these types of  
13 questions and issues that are on your mind about the  
14 commitment plan. So that as we go through our  
15 meetings in 2023, we can take them in deeper dive  
16 and then make sure we're ready to look at another  
17 three-year model for the next three years when we  
18 come back and hopefully do that in September of next  
19 year.

20 So this is exactly what we'd hope to hear  
21 and it is a planning exercise in many ways, and so  
22 there is always the opportunity to think about how

1 what we've learned can kind of enhance our planning  
2 moving forward.

3           And the last thing I'll mention, is that I  
4 think it also, what we were in an effort to do here,  
5 is stay true to that multi-year model that you saw  
6 before, that the Board approved in 2020. And if the  
7 Board wants to reconsider that multi-year model, we  
8 want to make the space and time for that discussion  
9 to happen.

10           DR. HOWERTON: I think perhaps we have all  
11 of the questions.

12           For some of the "old Board members," who  
13 remember Bob Zwolak, we may have to give Ryan  
14 Bradley the Honorable Bob Zwolak question of: "Why  
15 haven't we gotten more money out the door?" If  
16 someone can find that motion from Bob Zwolak and  
17 share it with Ryan, that would be great.

18           Maureen, are there any updates to  
19 attendance?

20           MS. THOMPSON: Dr. Howerton, Robert Valdez  
21 has a question.

22           DR. HOWERTON: I'm sorry. My mistake. Go

1 ahead.

2 DR. VALDEZ: No problem, Russ. I just  
3 wanted to follow up Nakela's comments about thinking  
4 about what we should be talking about this next year  
5 as a result of this three-year, multi-year planning  
6 And part of it has to do with the infrastructure  
7 investments that would go up to deal with the Phase  
8 4 of the PCORnet infrastructure.

9 That's probably a good topic for the Board  
10 to revisit as we think about the out years of that,  
11 what that Phase 4 really looks like and what it's  
12 for and whether we're going to accomplish what we  
13 need to. Just a placeholder.

14 DR. HOWERTON: All right. I will ask  
15 Maureen and Nakela to make note of that for upcoming  
16 agenda items.

17 Maureen, any updates to attendance?

18 MS. THOMPSON: Yes, Dr. Howerton. James  
19 Schuster has left the meeting.

20 DR. HOWERTON: Okay. Do I have a motion to  
21 approve the fiscal year 2023 to 2025 commitment  
22 plan?

1 DR. McNEIL: So moved.

2 DR. HOWERTON: That was Barbara, I believe.

3 DR. McNEIL: Mm-hmm.

4 DR. HOWERTON: And is there a second?

5 DR. GHOGAWALA: I'll second.

6 DR. HOWERTON: And that was Zoher

7 Ghogawala.

8 All right, I'll now call for a voice vote.

9 All those in favor, please say aye.

10 [Ayes.]

11 DR. HOWERTON: Any in opposition or  
12 abstention?

13 [No response.]

14 DR. HOWERTON: All right. I believe the  
15 motion passes. Thank you.

16 And please turn off your microphones if  
17 you're not speaking.

18 And perhaps that will take us to the next  
19 agenda item, and that is the update from the  
20 Healthcare Cost and Value Work Group. Eboni Price-  
21 Haywood, chair of the Healthcare Cost and Value Work  
22 Group will introduce the work group's update, which

1 will be presented by Greg Martin, Acting Chief  
2 Engagement and Dissemination Officer.

3 Eboni.

4 DR. PRICE-HAYWOOD: Thanks, Russ. Good  
5 afternoon, everyone.

6 Greg and I are happy to share with you  
7 today our closing report for the Healthcare Costs  
8 and Value Work Group. If you'll recall, in the 2019  
9 reauthorization, PCORI's funding included a  
10 provision clarifying that research funded by the  
11 Institute, clinical and patient-centered outcomes  
12 shall include potential burdens and economic impacts  
13 of intervention studies.

14 So in response throughout 2022, the PCORI  
15 has taken on a scope of work in informing the value  
16 conversation. So for over a little over a year, the  
17 work group has discussed PCORI mandate regarding the  
18 collection of the full range of outcomes data and  
19 how PCORI can best contribute to ongoing  
20 conversations around value. We've engaged patients  
21 and stakeholders to better understand their unique  
22 perspectives on value in health and healthcare,

B&B REPORTERS  
29999 W. Barrier Reef Boulevard  
Lewes, DE 19958  
[302] 947-9541

1 particularly patient-centered value.

2 We are providing information this afternoon  
3 through a landscape review and a draft report to  
4 help inform conversations around patient-centered  
5 value.

6 Today's session provides an opportunity for  
7 your reflections on this work and the next steps.  
8 We're looking forward to discussions with you this  
9 afternoon. And with that, I'll turn it over to you,  
10 Greg.

11 MR. MARTIN: Thank you, ma'am, I appreciate  
12 the kind introduction. Next slide, please.

13 First off, before we get too far into this,  
14 I do want to acknowledge the members of the work  
15 group, including those who have since stepped away  
16 from PCORI. They all have my personal thanks for  
17 the perspectives, guidance, and wisdom that they  
18 brought to our conversations and to our efforts, all  
19 of which were essential to our success.

20 Next slide.

21 So what was the purpose of the work group?

22 It was really to guide PCORI's emerging

1 approach to the critical intersection of cost and  
2 value, building upon the principles for the  
3 collection of the full range of outcomes data that  
4 this Board approved. We recognize that healthcare  
5 cost and value does remain an important topic, and  
6 the work group did identify an approach that we  
7 shared with you back in February to position PCORI  
8 as a trusted contributor to conversations around  
9 cost and value. And we made sure that efforts would  
10 be aligned with the reauthorization provision that  
11 Dr. Price-Haywood just mentioned.

12 Part of this approach was ensuring that we  
13 could recognize and acknowledge the complexity of  
14 the healthcare system in which we all are working,  
15 and to really stay focused on what it is that PCORI  
16 can accomplish.

17 So we established a framework emphasizing  
18 PCORI's patient-centered approach and our role as a  
19 trustworthy convener. We aim to be timely and  
20 responsive to the current environment and we aim  
21 towards short-term activities, such as convenings  
22 and white papers, to help inform stakeholders and

1 help applicants for PCORI funding.

2           It was all about ascertaining how we can  
3 act on what people care about and ensure that all  
4 stakeholders, including patients especially, are  
5 reflected in the work we produce. So we engaged our  
6 community and we're going to continue to encourage  
7 stakeholder comments and input. Next slide, please.

8           And you'll see here PCORI's framework for  
9 our activities. and it's critical to be abundantly  
10 clear still, that this is not a value framework.  
11 What this is a framework for organization of our  
12 activities over the last year to inform discussions  
13 around healthcare cost and value.

14           All three pillars are important. They're  
15 all interconnected, but a bit independent. And as a  
16 work group, we focused a bit more on that center  
17 pillar shaded in the darker blue.

18           So this was around informing the value  
19 conversation. We continue to work on the left  
20 column around collecting the full range of outcomes  
21 data, and we're taking steps to ensure that the  
22 research we fund appropriately considers all the

1 potential burdens and economic impacts of the  
2 conditions and interventions being studied and we're  
3 going to continue to clarify promising practices to  
4 support recommended approaches and refine guidance.

5           For informing the value conversation, where  
6 we spent so much time, we had heard clearly from our  
7 stakeholders, this interest in PCORI continuing to  
8 inform this important space and our work was really  
9 attempting to help connect the dots between, on the  
10 one hand, perspectives on value and on the other,  
11 this data that is starting to be collected on cost  
12 and burden. So they can be difficult to measure  
13 these data. They can be subjective, dependent on  
14 the condition or other factors including insurance.

15           So we wanted to make sure that we were  
16 engaging patients, patient advocates, and others.

17           So as we move forward, we recognize that  
18 PCORI should not be arbitrating what is or is not  
19 value. Our underlying authorization did set up  
20 guardrails to preclude PCORI from issuing payment  
21 policy or coverage recommendations or issuing  
22 clinical guidelines. So we wanted to instead

1 provide information to inform decision-makers in the  
2 health sector and use our convening power to bring  
3 together all of our stakeholders to help us better  
4 understand how define value and consider important  
5 attributes or components of patient-centered value.

6 Next slide.

7 To start down this pathway, we produced our  
8 first deliverable, a landscape review that was  
9 focused on what are those public statements that  
10 patients, patient advocates, disease or condition  
11 advocates, clinical societies, all of our  
12 stakeholders have published to their websites or put  
13 out into the public sphere? And how is it that we  
14 could synthesize and summarize these various  
15 perspectives that are out there?

16 We took time to look at these, listen to  
17 them, learn from them, and we identified four  
18 initial broad domains in 48 distinct components of  
19 value.

20 Now, this landscape review then served as  
21 the foundation for our iterative snowballed  
22 engagement work. So we adopted this approach to

1 really build on this foundation from the landscape  
2 review, which again, looked at what people are  
3 saying, what stakeholders are saying publicly about  
4 their perspectives on value and health and  
5 healthcare.

6           And so we took the time to listen to and  
7 learn from them, and it culminated in a multi-  
8 stakeholder workshop to discuss our evolving  
9 understanding. The goal of this work stream was  
10 really to help us identify which components may  
11 build up into individual definitions of patient-  
12 centered value in health and healthcare. We wanted  
13 to understand which of these components are critical  
14 to which stakeholders, why and how they can be  
15 measured. Next slide.

16           So you'll see here what are the major  
17 questions that we were really asking to shake this  
18 out. Identifying the components of patient-centered  
19 value. What does it mean to different communities?  
20 And what elements, attributes, components to  
21 different stakeholders consider to be a part of  
22 value measurement? Next slide, please.

1           So again, this demonstrates the iterative  
2 approach that we took: Review what's out there in  
3 the public sphere. Issue the landscape review, use  
4 this as the foundation. Have one-to-one interviews  
5 that resulted in this inventory of attributes. Have  
6 small group meetings with stakeholder community  
7 representatives, that helped us refine the  
8 inventory. And then a large convening to really  
9 help us elevate additional considerations, the  
10 context, the nuance of these different attributes.  
11 Next slide.

12           And we came out the other side with this  
13 inventory. Again, 48 attributes across seven  
14 distinct domains. These are general categories, but  
15 these can then themselves translate into other  
16 measures, outcomes, or policy for decision-makers.

17           In an appendix to the draft report, which  
18 you received as part of your materials, there's an  
19 early attempt to heatmap some of these attributes to  
20 start covering all the attributes and to also  
21 identify in these initial conversations what we've  
22 heard from stakeholders, which ones are critical to

1 them, which ones are -- is there some disagreement?  
2 And which ones do they think, "Eh, for us, that's  
3 not really the most important thing"?

4           And again, the purpose is to allow  
5 stakeholders and applicants as needed, to really  
6 consider what might be core inventories and to also  
7 help support more nuanced and conversations with  
8 greater understanding between and among  
9 stakeholders, and particularly those in our  
10 applicant teams. The next slide.

11           So let's talk a little bit about next  
12 steps.

13           So we want this to be a resource for PCORI,  
14 for our applicants, for the broader healthcare  
15 community. So we want to make sure that we're  
16 getting the broadest possible feedback on our  
17 understanding from the healthcare community. So we  
18 intend to post this draft report for public input  
19 early in January, so that way we can hear from all  
20 of our stakeholders: Are we hearing you correctly?  
21 Have we understood what you've said publicly  
22 correctly? Help us understand in greater detail the

1 nuance, the context, the considerations around each  
2 of these attributes or components of what may roll  
3 up into patient-centered value.

4           We want to continue to be able to reflect  
5 back to the broader healthcare community and our  
6 applicants and our stakeholders, and for ourselves,  
7 this understanding of how each of us can approach  
8 notions of patient-centered value.

9           So we're starting to think of what follow  
10 on products may be helpful after we've finalized the  
11 draft report. What can help us better facilitate  
12 understanding of diverse perspectives and what  
13 activities can follow on that can help us deepen our  
14 understanding of measurement issues? Again, we want  
15 to help people that are asking us to fund their  
16 studies. We want them to better understand patient  
17 perspectives.

18           This is one of the key things that the work  
19 group identified as a strength for PCORI, that  
20 ability to elucidate and elevate what matters to  
21 patients. We hope that this resource can empower  
22 patients, applicants, and stakeholders to ask

1 stronger questions and submit more rigorous  
2 applications that can reflect this nuanced  
3 understanding of this intersection between cost and  
4 value.

5           And just as a final note, we want to be  
6 clear that we're not asking people to develop  
7 applications, to develop value frameworks. That's  
8 really a space for others. What we're trying to do  
9 here is help, again, elucidate what matters so that  
10 way they can have more nuanced conversations, and so  
11 we can have more nuanced conversations with each  
12 other. Next slide, please.

13           So we have a few questions for your  
14 consideration today. I'm not going to go through  
15 them each, but we do have them here for your review,  
16 and I'll give you a moment to read through them  
17 again. But with that, Dr. Howerton, I will cede the  
18 floor back to you for any questions that the group  
19 may have.

20           DR. HOWERTON: Thank you, Eboni and Greg.

21           The floor is now open for discussion of the  
22 questions listed on the slide. Board members,

B&B REPORTERS  
29999 W. Barrier Reef Boulevard  
Lewes, DE 19958  
[302] 947-9541

1 please remember to raise your hand if you wish to  
2 speak and identify yourself before speaking.

3 DR. McNEIL: It's Barbara, Russ.

4 DR. HOWERTON: Ryan and then Barbara.

5 DR. BRADLEY: I have a variety of questions  
6 but I'll try to prioritize them.

7 I think one of my questions about this  
8 process is in reviewing the appendix materials and  
9 looking at the various stakeholder organizations  
10 that were engaged in the process, I'm just curious  
11 how socioeconomic status or other barriers to access  
12 to care how those factors were considered especially  
13 in the engagement of patient groups. Because it  
14 looks as though many of the patients who were  
15 included as stakeholders were associated with some  
16 sort of organization or institution that suggests to  
17 me that they have involvement in these  
18 organizations. They have access to care.

19 So just looking at this through an equity  
20 lens, I'm just curious, first and foremost, how  
21 those issues were considered in the process.

22 MR. MARTIN: Yeah, that's an excellent

1 question. And by and large, we did aim for  
2 convenience sample of stakeholders. We also aimed  
3 for engaging those who have issued public statements  
4 in this space, and those that have been conversing  
5 with PCORI in this space.

6 Diversity, equity, inclusivity,  
7 accessibility interests were raised throughout  
8 conversations across all stakeholders, and that's  
9 one of the things that led us to this interest in  
10 posting the draft report for public input.

11 Again, we want to be able to throw the  
12 doors open and invite feedback from the broadest  
13 possible swath of interested parties to help inform  
14 us, to help inform the broader healthcare sector  
15 around their perspective on these different  
16 attributes within the inventory. How do they  
17 approach them? What's the context in which they  
18 experience them? What are potentialities for  
19 measurement around them? What are some of the  
20 trade-offs that may be made as different attributes  
21 or components are considered within the definition  
22 of patient-centered value?

B&B REPORTERS  
29999 W. Barrier Reef Boulevard  
Lewes, DE 19958  
[302] 947-9541

1           We're going to work with our stakeholders  
2 and our patient advocates, our community, to help us  
3 try and get as much of that feedback from diverse  
4 communities as possible to get some of those  
5 learning and involved and incorporated into --

6           [Computer noise interference.]

7           DR. BRADLEY: Thanks for that. And I hear  
8 that language and I think the language is really  
9 important, but I'm also, I'm a little bit more  
10 interested in the deeper process, and there might be  
11 others on the Board that have more expertise in this  
12 area, certainly than I do. But I guess I question  
13 some elements of the process because we know that  
14 many disadvantaged groups are mistrusting of  
15 organizations. They're distrusting of medicine,  
16 they're distrusting of PCORI. They're unlikely to  
17 provide important feedback via solicitation on a  
18 website or other things.

19           And so, I guess I'm wondering if there are  
20 opportunities to get deeper into those communities  
21 by engaging other intermediary groups or some other  
22 means to capture those voices, just to make sure

1 that we don't continue to marginalize them and leave  
2 them out of this really important conversation.

3 MR. MARTIN: No, I think that's exactly  
4 right and that's a point that's definitely well met.  
5 And we're going to look to how it is that we can  
6 work with the network that we've built of  
7 stakeholders that are engaged with us, patient  
8 advocates that are engaged with us, those that are  
9 the trusted intermediaries to their community.

10 It's not just being totally reliant on  
11 larger organizations that may be more familiar  
12 names. We've been delighted and humbled by the  
13 engagement that we've had from community advocates,  
14 community-engaged participants. Our ambassadors  
15 program contains many of these individuals and  
16 they've been enthusiastic supporters of our work and  
17 have been excellent at helping us to understand  
18 ground-level nuance and meet people where they are  
19 to gain this greater, richer understanding of how  
20 care is not only delivered, but experienced across  
21 this country.

22 DR. BRADLEY: Thank you for that. And I

1 again, I'm just going to do one more important  
2 question because I don't want to hog the floor. I  
3 know many others have questions, so I promise this  
4 is my last one.

5 But in the appendices, there is, there are  
6 comments related to the engagement of complementary  
7 integrative health providers.

8 But yet, when I look at the stakeholder  
9 organizations that were involved, I don't see any  
10 national representative bodies for chiropractic,  
11 naturopathic, acupuncture, oriental medicine,  
12 Chinese medicine, massage therapy, et cetera. So  
13 these are the large licensed complementary  
14 integrative health disciplines. And yet I don't see  
15 those organizations amongst the stakeholder groups.

16 So we know 33 percent of adults in the  
17 United States use some form of complementary  
18 integrative health. They're paying out-of-pocket.  
19 They've made a value judgment about how this care  
20 impacts their health to the degree that they're  
21 willing to pay out-of-pocket for it.

22 So I'm just curious about how those voices

1 were met or were engaged, and if not, how we might  
2 revisit that.

3 MR. MARTIN: Yeah, certainly that's another  
4 excellent question. And we definitely are going to  
5 be engaging those organizations, those communities  
6 of clinicians in our work to ensure that their  
7 perspectives are representative as well. And we  
8 definitely welcomed the opportunity to work with you  
9 to ensure that we can reach those organizations.

10 DR. HOWERTON: Yeah, that sounds like a  
11 great opportunity, Greg, for you to connect with  
12 Ryan offline and see if there's the knowledge about  
13 the breadth of the field we could go after.

14 I believe it was Barbara and then Connie  
15 for next questions. Is that accurate?

16 DR. McNEIL: I think so, Russ.

17 So I'm really confused and I raised this  
18 one when we first talked about this, the new  
19 expanded mandate for PCORI to consider costs. And  
20 that's actually not what this committee has done at  
21 all. And I don't know whether we want to do it, but  
22 it certainly hasn't been done.

1           What the committee has done is interviewed  
2 lots and lots of people, lots and lots of  
3 stakeholders' groups. The slide, a couple of before  
4 this, listed all of the domains that people care  
5 about. And one of them was, in fact, costs.

6           But what I'm trying to figure out is what  
7 is the report from this committee going to look  
8 like?

9           It is it going to be a big taxonomy of all  
10 of the possible things that you have learned from  
11 interviewing various groups about what patients  
12 value? Quality of life in multiple dimensions,  
13 quantity of life, whatever it is. And then in  
14 addition, there'll be some things that say, "It  
15 really costs a lot to get to the doctor," or  
16 whatever.

17           But that, I don't think that reflects what  
18 we've talked about in the past in many of our  
19 discussions about various applications, about  
20 whether or not to include the costs of whatever it  
21 is that we've been evaluating. I don't know whether  
22 we should or we shouldn't, but certainly that was

1 given to us as something that we could do in this  
2 new round of our new life. But that's not, you  
3 didn't touch that at all. At all. And I'm just  
4 wondering what you're thinking, what your thought  
5 thoughts are?

6 DR. PRICE-HAYWOOD: Greg, may I?

7 MR.MARTIN: Yes, ma'am.

8 DR. PRICE-HAYWOOD: So one of the things  
9 that struck me in listening to the conversations  
10 with the stakeholders, is this idea of cost and  
11 value, and what do you mean by cost? And there are  
12 a lot of people who, when you talk about costs, is  
13 not always about the dollar sign. So I wanted to  
14 emphasize that.

15 There is a cost burden, different ways it  
16 can be described, that might be described in using  
17 the word cost. But there's different ways that, I  
18 think the common denominator may be around the  
19 dollar, but what I was struck by was the additional  
20 perspectives that people brought to the conversation  
21 that was not all about the dollar. That there are  
22 other things that you experienced that is a cost or

1 a burden to you as a patient, the caregiver, the  
2 family member, the community, and things of that  
3 nature.

4 So I just wanted to put that out there  
5 because it did come up in several times.

6 DR. McNEIL: No, this is absolutely -- I  
7 think that's absolutely true, Eboni. There's no  
8 question about it.

9 But what I'm going back to is our original  
10 discussions probably over a year ago, and in  
11 multiple discussions with the Selection Committee  
12 where we were actually looking at A versus B, and  
13 there was a big difference in the dollar sign costs.

14 That's what I thought we were talking about  
15 with this committee. Maybe we shouldn't be, but  
16 that is what we were talking about then, and I'm  
17 just wondering whether that is now a dead issue or  
18 whether it's something that you're going to now  
19 think about on round two, because it clearly didn't  
20 come up on round one in the way that was anticipated  
21 a year or a year and a half ago.

22 That's my only comment.

1 DR. COOK: I may jump in to provide some  
2 insights too, and Greg, feel free to build on this.

3 But you know, one of the things Barbara, I  
4 think you're referring to is that earlier on, over a  
5 year ago, we spoke with the Board about the  
6 principles around which we were interpreting the new  
7 provision in our reauthorizing law and those  
8 principles were approved by the Board and moved  
9 forward into the guidance that we provide to  
10 applicants and teams that are coming in for PCORI  
11 awards, and we also anticipate continuing to work  
12 with our Methodology Committee in ways in which we  
13 can think about the types of approaches that may  
14 start to build some degree of standardization of the  
15 way in which we collect this information, et cetera,  
16 that includes cost and economic burden.

17 And I think the work group itself, as you  
18 saw in that framework, had three different pillars  
19 it worked on. And that work that you're describing,  
20 I think really aligned to that first pillar and some  
21 of the work that's ongoing there, including the fact  
22 that we're now supporting that with an Economic

1 Resource Center that's helping to put that guidance  
2 together. So that work is in progress.

3 But the work group itself focused a bit on  
4 the second pillar, which was much more around  
5 understanding the broader perspectives that really  
6 are important to come into play when you're talking  
7 about value and patient-centered value and how we  
8 may need to put that type of data in this kind of  
9 understanding of the framework of the perspectives  
10 of value. And so, it's a second component to all of  
11 that work.

12 And then that third pillar was really how  
13 both of the former two pillars are going to inform  
14 our ability to really be part of larger, providing  
15 that type of information that may be important for  
16 policy discussions and things of that nature.

17 And so, it does all come together and I  
18 didn't want to have it seem as though that first  
19 line of work is stopping, that's actually still  
20 ongoing and we're still supporting that activity at  
21 PCORI.

22 DR. McNEIL: Well, I just, I think that's

1 really a terrific explanation Nakela. I think I  
2 would recommend that when in presenting this pillar  
3 number two, you don't give a listener like me the  
4 suggestion that you were talking about costs with a  
5 dollar sign, because that is the impression that I  
6 walked away with.

7           And clearly from what you just said, that's  
8 not it at all. And that that's in bucket number one  
9 and there'll be bucket number three. And I have no  
10 idea how bucket number three happens, I actually  
11 doubt it can happen, where you're going to mix one  
12 with two. But two is clearly, in my view, the most  
13 important and it will actually relate to all of the  
14 stuff that you've talked about with your various  
15 interviews, whether they've been complete or  
16 incomplete as Ryan suggested.

17           But just in several slides back, we talked  
18 about costs. I think you're going to confuse a lot  
19 of the research community with that language.  
20 That's my sense.

21           Zoher actually has a comment.

22           DR. GHOGAWALA: Sorry, I may be out of

1 order though. I think there's another question.

2 DR. HWANG: If you're building on this, go  
3 for it.

4 DR. GHOGAWALA: Okay. So I agree very much  
5 with what Barbara is saying.

6 And I just wonder whether it might be  
7 possible to explicitly say really for the research  
8 community who will be doing this work, that it's a  
9 priority to look at dollar sign cost from a patient  
10 perspective when you're comparing A versus B, and  
11 understanding, Eboni, that that can be more  
12 complicated than just the cost of, you know, a  
13 medication or whatnot. It can be taking time off to  
14 see the doctor, arranging for childcare when you're  
15 seeing the doctor.

16 All of these are costs, and all of these  
17 ultimately have dollar signs associated with them.  
18 But at least from my perspective, I think it would  
19 be very important for patients as well as our  
20 organization and for researchers to know that that's  
21 something they should look at if they're going to be  
22 understanding value from a patient perspective.

1 DR. PRICE-HAYWOOD: It was what I was  
2 thinking, but I didn't articulate it. And I think  
3 from the research perspective, it's a part of the  
4 spectrum that's often ignored. And I just wanted to  
5 make sure that this value piece is the centerpiece  
6 in thinking about the extension of what we typically  
7 think about when we talk about costs because it's an  
8 added layer from the community's perspective and we  
9 just don't give it enough attention.

10 So I appreciate your comment.

11 DR. GHOGAWALA: Thanks.

12 DR. HOWERTON: Thank you. Connie.

13 DR. HWANG: Yeah, thank you.

14 Great discussion. And kudos to Greg and  
15 Eboni, in terms of their leadership in getting us to  
16 this point. And I really do appreciate both Barbara  
17 and Zoher's comments about what we need to think  
18 about sort of moving ahead.

19 My question is actually sort of related to  
20 the two, latter two on this slide. But thinking a  
21 little bit about how in the reauthorization of  
22 PCORI, right, is this new flexibility as everyone's

1 noted to look at cost impacts. I was curious as to  
2 what our strategy might be to keep congressional  
3 leaders and groups that supported PCORI to have this  
4 expanded, you know, scope, sort of updated on the  
5 progress, get some feedback or input on where  
6 further we need to go. It's never too early to  
7 think about the next reauthorization, but just  
8 wanting to see like how it, you know, how we're  
9 going to leverage some of this work and engage those  
10 leaders that have obviously been supporters of PCORI  
11 and excited about this expanded space.

12 MR. MARTIN: That's a great question,  
13 Connie. You know, certainly, we're going to be  
14 making sure that we can keep all of our friends up  
15 on the Hill well-aware, as well as across the  
16 federal space as to what we're doing around  
17 informing the value conversation.

18 The policy community was one that we heard  
19 from clearly about an interest in helping to  
20 elucidate of these varied and diverse perspectives  
21 on value. So it's kind of fun actually to be able  
22 to deliver them back to something that, you know,

1 what we're hearing is that has never really been  
2 done before as well, which is pulling together in  
3 one single resource how diverse stakeholders really  
4 do approach value in health and healthcare, and also  
5 patient-centered value.

6 So I know I keep using that line a lot, but  
7 there's a richness to what I think we're uncovering  
8 that's shown to be welcome, and in particular,  
9 with our policymaker community.

10 DR. HOWERTON: Thank you. If there are no  
11 more comments or questions, am I missing any? I  
12 would, on behalf of the Board, like to extend our  
13 sincere thanks and appreciation to the members of  
14 the work group for their contributions to this very  
15 important work.

16 If I did not miss any other questions,  
17 perhaps that will take us to our next agenda item,  
18 which is the end-of-year dashboard review. I would  
19 like to invite Executive Director, Nakela Cook, to  
20 review this for us.

21 DR. COOK: Great. Thanks so much Russ.

22 This is an exciting presentation and we're

1 pleased to present our fiscal year 2022 end-of-year  
2 dashboard for review with the Board.

3           And we're actually in a time of transition  
4 at PCORI, where we're closing out the dashboard  
5 that's been used to measure progress against our  
6 prior strategic plan and thinking about how we want  
7 to revise that evaluation framework to generate the  
8 metrics that the Board would want to track our  
9 strategic plan moving forward given the recent  
10 establishment of our new strategic plan. So we're  
11 looking forward to standing up this work group of  
12 Board and staff that will help us establish the  
13 evaluation strategies that are going to inform this  
14 future framework for us.

15           But for today, I wanted to present  
16 highlights from the metrics that were tracked in  
17 2022. And hopefully you'll see that this is a  
18 really exciting presentation with lots of great  
19 information. Let's go ahead to the next slide.

20           So this slide actually demonstrates the  
21 dashboard itself. And the dashboard consists of  
22 several quantitative measures that lend themselves

1 to well-encapsulated reporting. And they're  
2 represented here with increasing measures of impact,  
3 from inputs to use as you progress down the slide.  
4 And over the years, the dashboard really has evolved  
5 from a focus that was primarily on inputs and  
6 process to progress on the strategic goals  
7 articulated in the prior strategic plan, and as well  
8 as toward outputs and uptake.

9           And so, you can see here that the input and  
10 process metrics listed are things such as funds  
11 committed or time to release of research findings.  
12 And they're represented in that first row. And we  
13 generally color code things green or yellow to  
14 indicate if they're meeting targets or not.

15           And the second row focuses on output and  
16 uptake metrics, and it includes things like CER  
17 results that are publicly available and Altmetric  
18 scores which measure attention to CER results. And  
19 you can also see uptake to patient and public  
20 resources.

21           And then finally on that third row, you see  
22 uptake in use metrics with the uptake of results

1 into things like clinical decision support tools and  
2 other examples of uptake such as citations and  
3 systematic reviews or guidelines or policy  
4 documents, and we have a new measure on the  
5 dashboard, which is that patients reached via  
6 dissemination and implementation awards.

7           So at a glance you can see that we're  
8 meeting all the targets except in the funds  
9 committed, as we discussed earlier today in our  
10 commitment plan discussion.

11           But I'd like to take a few of these and go  
12 a little bit deeper to talking about them. And as  
13 you can see, and the funds committed to research,  
14 this one is in yellow because we weren't meeting the  
15 target. And as we discussed, the committed about  
16 \$481 million to awards in fiscal year 2022, which  
17 was approximately 80 percent of the projected amount  
18 for the fiscal year.

19           And in the following slides, I'm going to  
20 go through a lot of detail for a lot of the other  
21 metrics, so I'm just going to hit some highlights on  
22 them here. But I wanted to mention, related to the

1 time to release of research findings that you can  
2 see we're meeting the target here. And PCORI's  
3 authorizing law really requires that we make  
4 research findings available no more than 90 days  
5 after the conduct or receipt of research findings.

6 So what you see here is a figure that  
7 presents both the average days to posting and the  
8 percentage of projects that are releasing final  
9 research findings within the targeted timeframe with  
10 a target of a hundred percent of the projects  
11 releasing findings within 90 days. And in quarter  
12 three and quarter four of '22, all of our final  
13 research findings were released within the 90 days.  
14 And the average length of time to abstract posting  
15 was about 84 or 83 days, depending on the quarter  
16 that you're looking at.

17 So, and generally I would say that maybe  
18 the summary takeaways that PCORI projects do  
19 consistently meet the target of abstract posting to  
20 our website under 90 days.

21 On the next metric here, you can see that  
22 we track quarterly the public availability of

1 results from all PCORI-funded studies, and not just  
2 the trials, but also other studies that are not  
3 randomized. And our long-term target for CER trials  
4 for public availability is with within 24 months of  
5 the primary completion date of the trial. And we  
6 also have a target of 18 months for non-trial CER  
7 studies.

8           And based on what we see here, our target  
9 for fiscal year 2022 is 34 projects expected to have  
10 results available to the public, and you can see we  
11 met that target with 38 CER projects that had  
12 results available to the public exceeding the  
13 target.

14           I'm going to talk a little bit more in  
15 detail on Altmetric scores on a following slide, but  
16 generally, our goal is to have 10 percent or more of  
17 articles that are published related to PCORI-funded  
18 studies in the top 10 percent of attention annually  
19 and we do expect variation on this by quarter.

20           But essentially, if you average over the  
21 last four quarters, 15 percent of articles have been  
22 in the top 10 percent of attention. So we're really

1 pleased with that result.

2           And when you look at some of the uptake  
3 measures, and particularly in uptake into patient  
4 and public facing resources, this is where we're  
5 tracking things like Wikipedia, health blogs, WebMD,  
6 Mayo Clinic, and other websites to see if CER  
7 results are mentioned on those sites from PCORI-  
8 funded studies. And we continue to expand this  
9 metric as we learn more about what's valuable to  
10 track. But in general, we've seen 57 citations or  
11 mentions across fiscal year 22, an accumulative  
12 total of about 330 citations to-date, which we think  
13 is getting more and more robust with time.

14           We are also tracking uptake into UpToDate,  
15 which is one of the point of care decision support  
16 tools that's used in clinical practice. And we have  
17 seen over the course of this year, 36 citations of  
18 results from PCORI-funded studies in UpToDate and a  
19 cumulative total of 134 citations to-date. And  
20 you'll see later that that continues to grow with  
21 time.

22           And we also are now in this new measure

1 tracking the number of patients that are reached to-  
2 date through dissemination and implementation  
3 awards. And this relates to the fact that we are  
4 now at the point at PCORI where research results are  
5 moving more and more into dissemination and  
6 implementation awards. And while the majority of  
7 these awards are still in progress, we can track the  
8 cumulative number of patients reached. And as more  
9 awards draw to completion, we'll be able to add  
10 other measures such as the reach for patients,  
11 clinicians, and caregivers as well.

12 But here you can see by the year end of  
13 2022, we had over 330,000 patients reach through  
14 dissemination and implementation awards.

15 Why don't we go ahead to the next slide?

16 So I'm going to transition from the  
17 snapshot review of the dashboard to actually  
18 highlight an example related to the strategic goal  
19 of increasing information for health decision-  
20 making. And this example highlights a recent PCORI-  
21 funded CER result that generated a lot of attention.

22 And this was a single blind, three-arm

1 randomized controlled trial that compared the  
2 effectiveness of treatments for insomnia amongst  
3 Black women. And the different interventions were a  
4 standard versus culturally-tailored version of  
5 cognitive behavioral therapy for insomnia versus  
6 sleep education materials. And the study actually  
7 found that both of the cognitive behavioral  
8 interventions and decreased insomnia severity and  
9 improved sleep outcomes more than control.

10           However, the culturally-tailored program  
11 was more effective at engaging participants with the  
12 program, and as a greater proportion completed the  
13 intervention, it was more associated with greater  
14 improvements in sleep.

15           And so one of the things we really think  
16 about this type of result is that there's an  
17 opportunity for us to learn more and more across  
18 interventions in the PCORI portfolio that have been  
19 culturally-tailored because we're starting to see  
20 these types of results come to fruition related to  
21 culturally tailoring of interventions.

22           We can go to the next slide.

1 I also mentioned earlier when we took a  
2 snapshot of the dashboard that we track the  
3 availability to the public of research results  
4 coming out of PCORI-funded studies and trials. And  
5 so this slide demonstrates the percentage of CER  
6 results that are available by publication or posted  
7 abstract relative to the primary completion date.

8 And so what you can see here is that  
9 research results from PCORI-funded trials, in this  
10 blue dash line on the slide, were published in the  
11 peer review literature at a rate that's better than  
12 the benchmark, which is in the orange line. So  
13 almost 60 percent of PCORI-funded trials have  
14 published preliminary findings in peer-reviewed  
15 journals by 30 months after their primary completion  
16 date, which is half the time of the benchmark in  
17 that orange line.

18 And then the purple line that you see on  
19 this slide is the percentage of CER results from  
20 PCORI-funded research studies that are publicly  
21 available by publication or posted abstract. And  
22 firstly, you can see how remarkably the curve is

1 bent back into the left with earlier posting of  
2 results relative to the benchmark. And when we  
3 include the results that are posted via abstracts on  
4 the PCORI website, nearly a hundred percent of the  
5 results are available to the public after about 35  
6 months, and you see that in the purple line.

7           So here you can really see, I think  
8 relatively quickly, the difference that the peer-  
9 review and posting of abstract process that PCORI  
10 makes, it provides that complete and earlier  
11 availability of research results funded from PCORI  
12 trials to the public over and above that of  
13 publications alone.

14           Let's go to the next slide.

15           So I wanted to also provide you with  
16 something that we're beginning to track at PCORI,  
17 relatively new in terms of sharing this with the  
18 Board. And awardees are asked, when they submit  
19 their final draft, final research report to submit  
20 information about their plan to return the aggregate  
21 results of their study to research participants.  
22 And since we've been collecting this information and

1 initiating this request, which was back in the fall  
2 of 2020, we've had 72 PCORI projects that are  
3 enrolling patients that have submitted this  
4 information and 83 percent of them indicate that  
5 they do intend to return study results.

6           And this really does compare favorably to a  
7 survey of clinical trials investigators who found  
8 that about 40 percent intended to return results.  
9 And so, we are also learning about the ways in which  
10 investigators are planning to return these results  
11 and the majority of them intend to distribute the  
12 PCORI lay language abstract that has been developed  
13 to their participants either alone or in conjunction  
14 with other materials. So it seems that that  
15 abstract is a really useful tool for investigators  
16 to return research results to participants.

17           But in addition to emailing and mailing  
18 results, some are also planning to go that extra  
19 mile and over half have planned to post results to a  
20 public website or portal, or a third have offered to  
21 hold webinars or in-person meetings to share  
22 results. So this is another exciting component of

1 really getting the results of PCORI-funded studies  
2 out to those who really have the opportunity to  
3 benefit from them.

4 We can go to the next slide.

5 I also wanted to provide you with a  
6 snapshot of year over year cumulative totals of  
7 peer-reviewed articles that are resulting from  
8 PCORI-funded studies across the portfolio, both as a  
9 whole and as well as those that have been conducted  
10 using PCORnet on the graph on the right.

11 And essentially, you can see the trend on  
12 the left of an increasing number of articles with  
13 time, both primary CER results and all publications  
14 with cumulative articles over 3,700. And also just  
15 to mention, as we sometimes identify publications  
16 months after they're published, the fiscal year 2022  
17 numbers will be expected to grow in the near future.

18 And on the right, we see a similar  
19 increasing trend in the numbers of articles with  
20 time resulting from PCORI-funded studies using  
21 PCORnet. But the scale's different, so I just want  
22 to make sure to point that out to you. It's blown

1 up here just for readability.

2 But in fiscal year 2022, the cumulative  
3 total of those publications resulting from studies  
4 using PCORnet is about 223 articles. And while  
5 we're really tracking those articles that are  
6 resulting from those PCORI-funded studies using  
7 PCORnet data, soon we're going to be presenting a  
8 lot more information that more broadly includes both  
9 externally funded projects as well as PCORI-funded  
10 projects that utilize PCORnet data. But we estimate  
11 that if you were to incorporate both those  
12 internally and externally funded projects, that  
13 there may be over 540 publications to-date.

14 You can go ahead to the next slide.

15 So I wanted to spend just a minute in  
16 talking about those types of measures that we've  
17 been looking at that are related to impacts such as  
18 attention and influence. And looking at those  
19 measures related to attention and influence of  
20 publication of CER results from PCORI-funded  
21 studies; and related to attention, we hone in on the  
22 Altmetric score as a measure of attention across

B&B REPORTERS  
29999 W. Barrier Reef Boulevard  
Lewes, DE 19958  
[302] 947-9541

1 different audiences and really this is predominantly  
2 from non-academic sources. And we're tracking the  
3 percentage of those CER articles that are resulting  
4 from PCORI-funded studies during that top 10 percent  
5 of attention, as I mentioned before, controlling for  
6 the journal and the date of publication.

7           And as I previously mentioned, our goal is  
8 to have 10 percent or more of articles in the top 10  
9 percent of attention annually. And we, as I wanted  
10 to point out here, averaged over the last four  
11 quarters, 13 percent of articles that's been in the  
12 top 10 percent of attention. And in quarter two of  
13 2022 alone, we had 20 percent of articles that were  
14 found to be in the top 10 percent of attention.

15           And as it relates to influence, what you  
16 see on the right, we gather and report information  
17 on relative citation ratios, which some of you may  
18 be familiar with, and we track that by year of  
19 publication. And the relative citation ratios  
20 really just measure scientific influence in the  
21 literature relative to NIH-funded publications in  
22 the same year and field.

B&B REPORTERS  
29999 W. Barrier Reef Boulevard  
Lewes, DE 19958  
[302] 947-9541

1           So the NIH papers are the benchmark that we  
2 use for this measure, and any paper essentially with  
3 a relative citation ratio that's 1.0 -- any paper  
4 with a relative citation ratio of 1.0 has a ratio  
5 that's higher than 50 percent of NIH-funded papers.  
6 So that's how that benchmark works.

7           And what we found is that CER results  
8 publications from our portfolio, have consistently  
9 demonstrated above average influence. And you can  
10 see that these relative citation ratios are well  
11 above 1.0 in this graph on the right side of the  
12 slide. Why don't we go to the next slide?

13           So I also just wanted to highlight a couple  
14 of the uptake measures that you saw on the dashboard  
15 and go a little deeper. We are tracking these from  
16 a variety of resources, as I mentioned, including  
17 patient-facing resources, UpToDate, and other  
18 resources. And generally you can just see on this  
19 slide that trend of increasing uptake in use of CER  
20 results from PCORI-funded studies over time with  
21 some of the cumulative statistics seen here in these  
22 graphs.

1           So for example, with patient and public-  
2 facing resources, in fiscal year 2022 alone, we  
3 identified 57 examples of that uptake in the public  
4 and patient-facing materials. And when you look it  
5 UpToDate or that point of care decision tool, we saw  
6 36 different citations in fiscal year 2022. And  
7 these include things like cancer-related fatigue,  
8 prenatal care, and COVID-19-related citations, which  
9 is exciting to see that some of that work that we  
10 did around COVID-19 was getting this type of uptake.  
11 And in addition to UpToDate, we're also tracking  
12 other examples such as uptake into systematic  
13 reviews, guidelines, and policy documents. And you  
14 can see that graph on the right as a steady increase  
15 as well.

16           Why don't we go ahead to the next slide?

17           So I just wanted to wrap up this report on  
18 the dashboard to really walk you through a story  
19 about a PCORI-funded study that has actually been on  
20 that path to impact and what we've been able to  
21 learn as we've moved through the various phases of  
22 CER results through dissemination and implementation

1 to now implementation study results.

2           And this is a project that focused on  
3 health decisions in prostate cancer treatment and  
4 our dissemination and implementation awards really  
5 promote that uptake in use of PCORI-funded research  
6 and practice. And as part of this funding, we  
7 anticipate that when we have more and more PCORI-  
8 funded research mature, and this came up in our  
9 discussion of the commitment plan, that we're going  
10 to have more studies that have findings that are  
11 ready to move into that dissemination and  
12 implementation phase and receive these types of  
13 awards that I'll talk about now.

14           And we have a growing number of awards  
15 coming to completion, which will allow us to really  
16 assess implementation of these interventions in  
17 real-world practice.

18           But the example I'm going to show you today  
19 illustrates that sequence of having results through  
20 the implementation into practice and traces that  
21 path from the initial publication and posting of our  
22 results on our website through the uptake of

1 findings and UpToDate as well as clinical guidelines  
2 and to now the findings of the implementation  
3 project results.

4 Let's go to the next slide.

5 So beginning with the CER study, this was  
6 an example of one of our early funded PCORI-funded  
7 studies. It was a population cohort study that  
8 compared the effectiveness of three common  
9 treatments for localized prostate cancer. And so  
10 those three different treatments included surgery,  
11 external beam radiation therapy, and active  
12 surveillance.

13 And after three years, patients who had  
14 surgery reported that there was lower sexual  
15 function and more urinary incontinence than those  
16 that had radiation or regular checkups to see if the  
17 cancer had spread. And those primary findings from  
18 the study were published in JAMA in 2018 and  
19 garnered high levels of attention as reflected by  
20 the Altmetric score. And the findings from that  
21 study were taken into clinical guidelines and cited  
22 in UpToDate as well.

1           And in the following slide, I want to just  
2 share with you how a recently completed D&I award  
3 implemented those findings in practice. So let's go  
4 to the next slide.

5           So this is the implementation project that  
6 was funded through a PCORI D&I award under the  
7 initiative on implementation of effective shared  
8 decision-making approaches in practice settings.  
9 And the project incorporated the findings from that  
10 original CER study into existing effective decision  
11 aids that were being used in practice. And the aid  
12 was really implemented across three different sites  
13 that represented very distinct clinical settings and  
14 populations with diverse race and ethnicity,  
15 socioeconomic status, and even insurance status.

16           And the project team used a number of  
17 strategies to support successful implementation of  
18 this shared decision-making tool, including  
19 education for physicians, presentations to hospital  
20 leadership and staff, translating the tool into the  
21 decision aid into Spanish for a Spanish-speaking  
22 clinical setting and population, and also

1 intervention adaptations to improve integration into  
2 the site workflow, as well as tailoring the  
3 intervention for different patient populations.

4           And why don't we go to the next slide?

5           So here you can see that in tracking some  
6 of the key metrics that were recently coming out of  
7 that implementation study several domains were  
8 highlighted: reach, adoption, fidelity, maintenance,  
9 and health decisions and care.

10           And across the three health systems where  
11 the study was implemented, over 80 percent of  
12 eligible patients were invited to use this decision  
13 aid and nearly 60 percent of them completed the tool  
14 and over half of them receiving the tool used it as  
15 intended. And at the site where the decision aid  
16 was translated into Spanish, 85 percent of patients  
17 completed the tool and most of them did so in  
18 Spanish.

19           And all of the eligible physicians  
20 participating in administering the tool continued to  
21 participate and none withdrew from the project.

22           And all three of the sites continued the

1 intervention as designed over two and a half years,  
2 including a post-implementation phase.

3           And when we look at decision quality and  
4 satisfaction with care, the patients at the  
5 implementation sites reported high decision quality  
6 and satisfaction. And at one of the sites, the  
7 project team actually examined efficiency of care  
8 and found that patients served after implementation  
9 of the aid, needed less time with their doctor and  
10 were less likely to need multiple visits to make a  
11 treatment choice.

12           So the team plans to use all this data,  
13 which I think is really rich coming out of this  
14 implementation project, as well as some of the  
15 findings on increased clinical efficiency to  
16 advocate for the implementation of shared decision-  
17 making interventions throughout the L.A. County  
18 system. And so, this is the second largest public  
19 healthcare system in the country, and I think really  
20 reflects on how the results from an implementation  
21 project can be considered at a much larger scale  
22 based on these remarkable learnings.

1           And a cost of implementation report is in  
2 progress to really inform what it takes to implement  
3 in at this scale.

4           Let's go ahead to the next slide.

5           So this all relates to that metric I  
6 mentioned that was new on the dashboard and  
7 something that we're continuing to track, and that's  
8 how we think about the growing number of D&I  
9 projects that are underway, implementing results  
10 from PCORI-funded research studies.

11           And I mentioned we're tracking numbers of  
12 patient reach to-date through the dissemination and  
13 implementation awards that are in progress and  
14 completed. And we're really looking forward to  
15 thinking about as awards draw to completion, the  
16 ability to report on additional metrics related to  
17 patients, clinicians, and caregivers reached through  
18 these completed projects by quarter and fiscal year  
19 and develop targets against which to measure these  
20 measures.

21           And we'll also be able to report on  
22 strategies that are supported in implementation in

1 real-world practice settings, which is something  
2 that I think many of those responsible for thinking  
3 about the implementation of these findings will find  
4 very helpful.

5           Why don't we go to the next slide?

6           So I'd like to end here and just ask you as  
7 we're thinking about the end-of-year dashboard  
8 report for 2022 and transitioning into this next  
9 phase of thinking about the evaluation framework  
10 that we'll want to stand up against our newly  
11 approved strategic plan, how we may think about what  
12 the Board would optimally want to use to monitor  
13 progress toward our goals and our National  
14 Priorities for Health, our Research Agenda, and  
15 Strategic Plan, and what role a dashboard might  
16 serve in the future.

17           We think some of this actually can really  
18 dovetail into the way in which we would think with  
19 the work group the evaluation strategies for the  
20 future.

21           So, Russ, I'll pause there and turn it back  
22 over to you.

1 DR. HOWERTON: Sure. Thank you, Nakela.  
2 The floor is open for discussion. Board members,  
3 please remember to raise your hand if you wish to  
4 speak or identify yourself before speaking.

5 We have this discussion and a brief comment  
6 about the new additions to our portfolio-funded  
7 awards so that we can be careful custodians of your  
8 time and end on time at three o'clock.

9 It may be a lot for anyone to have  
10 suggestions off the top of their head of this  
11 dashboard, but I would commend to the new Board  
12 members that the dashboard has evolved over the  
13 years I've been involved with PCORI from the  
14 suggestions of Board members of what they would want  
15 to see as performance metrics.

16 So as you reflect upon them, as you go away  
17 from this meeting and think about what you would  
18 like to see at your next board meeting, please reach  
19 out to Nakela or Maureen.

20 Am I missing any comments? Danny?

21 MR. VAN LEEUWEN: Yes. Thank you for this.  
22 This is great.

1 I think that I'm looking forward to more  
2 sophisticated thinking about what public uptake  
3 actually means. I'm not sure that it's just that a  
4 study that was in a journal got on Twitter is really  
5 a public uptake. And you know, this thinking about  
6 taking to the next level what we mean by public  
7 uptake.

8 I also think that thinking about what our  
9 stretch goals are, you know, that we have this, you  
10 know, really ambitious strategy around equity and  
11 inclusion in research, and research and equity  
12 inclusion, and equity inclusion in the research  
13 process. And so, I think thinking about what our  
14 how we're going to recognize success in those areas  
15 is also going to be just a hoot-and-a-half challenge  
16 to try to figure out.

17 So I'm looking forward to that.

18 DR. HOWERTON: Am I missing other questions  
19 or comments?

20 MS. BERRY: It's Kate. If it's okay, I  
21 wanted to kind of weigh in to appreciate Danny's  
22 comments.

1 I was thinking along the same lines, sort  
2 of the idea of really, you know, maybe trying to  
3 more deeply understand what, you know, public uptake  
4 means.

5 So something to think about there.

6 Nakela, I really liked the example you  
7 provided about the prostate cancer study. But of  
8 course, I can't help myself but to ask, you know,  
9 it's great to use a shared decision tool and, you  
10 know, those are fantastic measures and a great  
11 story. But, of course, I want to ask were the  
12 patient outcomes better, you know, than they  
13 would've been if they didn't have that tool  
14 available to them.

15 I think it, you know, should be an obvious  
16 yes, but that's another example of just thinking  
17 through, you know, what other information might be  
18 helpful. So thank you.

19 DR. HOWERTON: Any others?

20 [No response.]

21 DR. HOWERTON: If not, I would ask Nakela  
22 to present the latest editions to PCORI's portfolio

1 of funded awards in our last few minutes.

2 DR. COOK: Great. Thanks Russ. And I'll  
3 go through this rather quickly.

4 Just to let you know that what I'll show  
5 today are the latest additions to awards, but wanted  
6 to just flag for you that we anticipate going a lot  
7 deeper and talking about the portfolio and the  
8 awards within the portfolio in a future board  
9 meeting, and have tentatively slated that for  
10 hopefully around the March timeframe where we can  
11 really go more deeply into an understanding of our  
12 awards.

13 Let's go ahead to the next slide.

14 So here's the quick summary of awards that  
15 following the recommendation by the relevant  
16 selection committee. Twenty projects have been  
17 recently awarded from six different PCORI funding  
18 announcements, totaling about \$100 million.

19 And two of these funding announcements were  
20 from our broad funding announcements, our Broad  
21 Pragmatic Clinical Studies announcement, as well as  
22 our Methods study announcement.

B&B REPORTERS  
29999 W. Barrier Reef Boulevard  
Lewes, DE 19958  
[302] 947-9541

1           And three of them come from, three of these  
2 announcements were from targeted or focused funding  
3 announcements. Some, as you can see here, one  
4 related to brief interventions for adolescent  
5 alcohol use, another on the comparative  
6 effectiveness of interventions targeting mental  
7 health and individuals with intellectual and  
8 developmental disabilities, and a third related to  
9 prevention, early identification and treatment of  
10 delirium in older adults. And we also had a funding  
11 announcement that generated awards in dissemination  
12 and implementation and this is the implementation of  
13 findings from PCORI's research investments.

14           Why don't we go to the next slide?

15           So each of these slides shows you those  
16 awards that were made from those different  
17 announcements. You can see that there were six  
18 research projects that were awarded under the Broad  
19 Pragmatic Studies announcement, which is that broad  
20 solicitation for research teams to propose ideas  
21 that would address a broad range of topics that  
22 align with our national priorities.

1           And so, here you see the awards slate  
2 covers multiple health conditions like hemodialysis  
3 for end-stage renal disease, bacteremia, aortic  
4 stenosis, as well as behavioral health  
5 interventions, and longer-term care focused on  
6 caregiver burden as well as individuals with  
7 disability.

8           We can go the next slide.

9           So here you can see the awards related to  
10 our methods funding announcement. And the methods  
11 funding announcement funds high priority  
12 methodological research topics in patient-centered  
13 outcomes research and CER. And the studies really  
14 try to address methodological gaps as well as  
15 support rigorous methods and standards and best  
16 practices. And this award slate includes things  
17 like an application that seeks methods for  
18 innovation and ethical and practical approaches to  
19 conducting highly efficient randomized trials, as  
20 well as new methods that explain and directly  
21 quantify the impact of different factors on the  
22 performance of machine learning algorithms between

1 sites and across time.

2           And you can see here as well that there's  
3 an application, an award here that proposes to  
4 develop new waiting methods to quickly handle large  
5 data sets. So that gives you the flavor of the  
6 types of awards that were coming through this  
7 funding announcement.

8           Why don't we go ahead to the next slide?

9           And here you can see that there were six  
10 applications that were awarded from targeted funding  
11 announcements. Under our brief interventions for  
12 adolescent alcohol use announcement, we were really  
13 seeking to fund studies that compared brief  
14 interventions to address alcohol use in primary care  
15 or school settings. And so, the applications and  
16 awards in this area focused on the comparative  
17 effectiveness of brief behavioral interventions that  
18 were adapted for adolescents ages 12-to-17 to  
19 address alcohol use.

20           And just one of the studies that you can  
21 see here is screening and brief interventions and  
22 referrals to treatment as a way to think about an

1 intervention where many children can be reached.

2           There's also a funding announcement here  
3 related to comparative effectiveness of  
4 interventions targeting mental health in individuals  
5 with intellectual and developmental disabilities and  
6 we were excited to see applications that address  
7 cognitive behavioral therapy versus mindfulness for  
8 autism, as well as the identification of really  
9 cognitive behavioral therapy and mindfulness as  
10 treatments that could be effective in for anxiety  
11 and depression for autistic adults.

12           We can also see on this slide the PFA  
13 related to prevention, early identification and  
14 treatment of delirium in older adults. And this  
15 announcement actually yielded projects that look at  
16 hospital elder life programs versus family-augmented  
17 help for prevention of delirium and exciting  
18 opportunities for us to think about filling evidence  
19 gaps that can inform decision-making.

20           Let's go to the next slide.

21           So on our dissemination and implementation  
22 award slate, you see that there were two awards that

1 were made, and the first project was one that's  
2 implementing an evidence-based psychotherapy for  
3 post-traumatic stress disorder in six different  
4 healthcare systems, and another that's focused on  
5 implementing obesity treatment in primary care using  
6 different types of evidence-based structures.

7 Let's go to the last slide.

8 So I just wanted to put this all into  
9 context and mention that of these \$101 million of  
10 awards, you can see how they'll align in the fiscal  
11 year 2023 commitment plan.

12 So the target in 2023 for research is \$500  
13 million, and with the awards that I shared with you  
14 today, our cumulative total for this first cycle of  
15 2023 is \$96 million. There are two more cycles to  
16 go in 2023, and usually our last cycle is our most  
17 robust.

18 And for the dissemination and  
19 implementation target in the commitment plan, we  
20 have a target in 2023 of \$40 million and the two  
21 awards that came in this time total \$5 million, and  
22 we're also anticipating two more cycles of awards

1 here.

2 I did have a slide for some discussion, but  
3 given the time, I think I'll just turn it back to  
4 you, Russ, and let you close out the meeting.

5 DR. HOWERTON: Thank you very much, Nakela,  
6 and I hope all of you, like me, found that to be  
7 impressive work that the organization you help lead  
8 is doing.

9 I would like to thank everyone who joined  
10 us today. Today's meeting agenda, slides, archived  
11 webinar, and approved minutes from the September  
12 20th, 2022 meeting will be posted to PCORI's website  
13 within a week.

14 As always, we welcome your feedback at  
15 info@PCORI.org or through our website www.PCORI.org.

16 Thank you again for joining us. Have a  
17 great afternoon and we look forward to seeing you at  
18 our next public meeting in February.

19 Thank you everyone.

20 [Whereupon, at 3:00 p.m. EST, the Patient-  
21 Centered Outcomes Research Institute's  
22 Board of Governors meeting was adjourned.]
