APPEARANCES:

BOARD OF GOVERNORS

Debra Barksdale, PhD, RN
Kerry Barnett, JD
Lawrence Becker
Francis Collins, MD, PhD
Leah Hole-Curry, JD
Allen Douma, MD
Arnold Epstein, MD
Christine Goertz, DC, PhD
Gail Hunt
Robert Jesse, MD, PhD
Harlan Krumholz, MD
Richard E. Kuntz, MD, MSc
Sharon Levine, MD
Steven Lipstein, MHA [Vice Chair]
Grayson Norquist, MD, MSPH
Ellen Sigal, PhD
Eugene Washington, MD, MSc [Chair]
Harlan Weisman, MD
Robert Zwolak, MD, PhD

P R O C E E D I N G S

[1:03 PM PST]

1
2
3 CHAIRMAN WASHINGTON: Welcome everyone, to
4 the Board of Governors meeting for the Patient-
5 centered Outcomes Research Institute. This is our
6 sixth Board of Governors meeting, and it really
7 marks our one-year anniversary, which officially
8 will be this coming Friday, September the 23rd.

9 For those of you -- and I see a few
10 familiar faces in the room who have been at each
11 and every one of the meetings, I thank you, again,
12 for your continued engagement, likewise to those of
13 you on the phone, who have been participating in
14 each meeting. Thank you. Those of you who are new
15 to the table and newly involved, I want to welcome
16 you and thank you as well for taking the time to
17 join us today.

18 As usual, we are going to hear reports
19 from our standing committees, but in addition, at
20 this meeting we are also going to hear reports from
21 a couple of working groups that will set the stage
22 for discussion on a couple of key issues that we

1 need to advance at this time.

2 At our last meeting, in July, I had the
3 great pleasure of introducing our neophyte
4 Executive Director. I think he would at this
5 point, whether he considers himself a veteran
6 Executive Director, might be a question, but I
7 think he would say he certainly has gained a great
8 deal of experience in the two months. And he might
9 even say he's a somewhat bruised Executive Director
10 after dealing with Vice Chairman Steve Lipstein.

11 [Laughter.]

12 CHAIRMAN WASHINGTON: So with that I'm
13 going to turn the program over to Dr. Selby.

14 DR. SELBY: Thanks, Gene. Hello everyone.
15 I'll say it's very nice to be here in the beautiful
16 Northwest and I was going to say I'm not bruised,
17 but I might be a little wrinkled after two months.
18 It's been a lot of fun. We've accomplished a lot.
19 We have just a raft of decision-making activities
20 on board, and you'll see some of them today if you
21 stay tuned for our board meetings over the next six
22 to eight months. I think you will see PCORI really

1 coming into shape and declaring its identity even
2 more profoundly than it has done to this point,
3 because there's a lot of decisions that we have to
4 make about things, like funding.

5 So, I want to just spend a few minutes
6 highlighting our activities in these first two
7 months that we've actually had some PCORI staff in
8 Washington. And we pulled together to work with
9 the Board and the Methodology Committee to discuss
10 how this staff is anticipated to grow over the next
11 few months and just present to you some of the
12 critical milestones in the timeline over the next
13 nine months of PCORI's life.

14 Among the activities that staff, Board,
15 and the Methodology Committee together have worked
16 on, and I really would like to extend a sincere
17 thanks to the staff, the interim staff who were
18 there before me, the staff who have come on since I
19 arrived, and to the Board and to the Methodology
20 Committee. Everybody has been pulling remarkably
21 hard. It's an exciting place to be. It's been a
22 lot of fun. But there has been, no doubt about it,

1 a lot of hard work on everybody's part.

2 We can say now that compared to two months
3 ago we have a set of HR policies that put us in a
4 position to hire people. You will see job
5 descriptions on the newly-designed PCORI website.
6 We've been refining our purchasing and RFP
7 policies, that's pretty essential because we've
8 issued our first RFPs. Conflict of interest
9 policies at a variety of levels are being
10 developed. This includes conflict of interest with
11 respect to being a Board member or a Methodology
12 Committee member. Conflict of interest when it
13 comes to reviewing grants and conflict of interest
14 and conflict of interest when it comes to the
15 possibility of applying for a PCORI grant.

16 As I said, and you'll be seeing it later
17 on this afternoon, I think or possibly tomorrow
18 morning, we have a newly-designed PCORI website.
19 And, as I implied, there's a lot of new material on
20 it, including funding announcements and job
21 descriptions -- job searches. Just a couple of
22 these or more, the outreach is just something that

1 I've been doing a lot of in Washington, and
2 developing IT infrastructure is something we're
3 doing mostly for staff, Board, and Methodology
4 Committee just so that we can communicate more
5 effectively.

6 We'll talk today a bit about growing our
7 staff and talk right this minute about long-term
8 space.

9 So, we've been located temporarily in
10 space in the business district of downtown D.C.,
11 but we've landed a very nice home, long-term, for
12 PCORI. And this is a building at the corner of
13 19th Street and L Street in Washington D.C. It's
14 not an extravagant building, but it's a very
15 functional building, it's a green building. It's
16 got exactly the amount of space we think we're
17 going to need over the next several years. And
18 we're up on the ninth floor, where the arrow points
19 to and that's where we'll be. We're very close to
20 the Red Line, as well as the Blue and Orange lines.
21 So no matter whether you fly in to Dulles or
22 National, we're easy to get to. No matter whether

1 you live in Maryland or Virginia, we're easy to get
2 to.

3 The July Board meeting, for those who were
4 there, raised a number of urgent issues. And being
5 my first Board meeting where I was really the in
6 situ Executive Director, I paid attention. The
7 first issue was that with the arrival of me and the
8 prospect of more PCORI staff, we really needed to
9 clarify decision-making and how decision-making was
10 going to go forward. Up to that point it had been
11 a Board activity, because that's who was there.

12 But also, there was a clear sense that we
13 needed to take some time to have more substantive
14 discussions than we could really have in a day and
15 a half of Board meetings. Not only among
16 ourselves, but also discussions between the
17 Methodology Committee, which was separately
18 appointed by the GAO and separately specified in
19 the legislation, but very clearly a partner with
20 the Board.

21 We did that yesterday. We arrived here
22 yesterday and had a very fruitful discussion with

1 the Board in the afternoon and with the Methodology
2 Committee in the evening on just on how we will
3 partner more effectively going forward.

4 The second urgent area was the area of
5 patient engagement. And the Board really expressed
6 itself strongly in July that we have to make clear
7 that PCORI aims to engage patients if we're going
8 to be conducting patient-centered research in ways
9 that we haven't seen before. And that one of our
10 first hires should be a patient engagement officer,
11 or Chief Patient Officer I think was the language
12 used last time. And I'll get a little bit more to
13 how we've addressed that in just a minute.

14 The next was the urgency of getting on
15 with developing the National Priorities and you're
16 going to hear about the National Priorities
17 tomorrow morning here. But before PCORI can really
18 fund its major or primary research, it by statute
19 has to elaborate National Priorities and a Research
20 Agenda. And that process we recognized in July has
21 to get started and has to move rather briskly so
22 that by early in 2012 we can begin producing RFAs,

1 RFPs and get funding onto the street and get
2 PCORI's primary research underway.

3 We also heard about the PCORI Pilot
4 Projects. A round of research funding that the
5 Board had decided it did want to put on the street
6 in 2011. This was an RFA that was been developed
7 largely by Board members. Since July, staff has
8 joined them in that effort. And so, that was
9 another urgent issue.

10 And the last urgent issue was that the
11 Methodology Committee really needed support to get
12 started issuing the RFPs and planning its
13 Methodology Report.

14 So, we took patient engagement. The Board
15 formed a Patient Engagement Working Group of seven
16 members. They very quickly developed a job
17 description for the Director of Patient Engagement.
18 We said that in addition to a Director of Patient
19 Engagement, we want a Director of Stakeholder
20 Engagement to engage providers, caregivers,
21 employers, health plans, health systems, health
22 services, researchers, and other researchers,

1 government, and industry. So, we created a job
2 description parallel to the Patient Engagement
3 Director called the Director of Stakeholder
4 Engagement, and a third position called the
5 Director of Communications.

6 And together, these three positions are
7 all posted on our website now. Together they form
8 an arm of PCORI that we might call the external
9 engagement arm. But I think it sends a message
10 that we indeed do aim to be engaged with patients
11 and all of our stakeholders from the beginning in
12 every aspect of research, and you know, with a
13 deployment of resources that hasn't been seen
14 previously.

15 The next urgent issue was the National
16 Priorities and the Research Agenda. We have a
17 working group that's leading the National
18 Priorities discussion, and it's the co-chairs are
19 Carolyn Clancy and Arnie Epstein from the Board.
20 Staff has put a lot of energy into working with
21 them and supporting this effort.

22 We've conducted an environmental scan and

1 you're going to hear more about this tomorrow on
2 previous priority setting efforts and frameworks,
3 criteria that were used. We've recognized the
4 close link between the National Priorities and the
5 Research Agenda. The Research Agenda Working Group
6 is led by Board members Harlan Krumholz and Leah
7 Hole-Curry. And we want to link the Priorities and
8 the Research Agenda-setting process. Again, you
9 will hear more about that tomorrow morning. But we
10 really take it very seriously that that's got to be
11 completed in fairly short order so we can get on
12 with funding.

13 This just illustrates that on the top, the
14 National Priorities, we have developed candidate
15 priorities. Over the next three months we will be
16 reaching out to stakeholders, all stakeholders,
17 intensely, by a variety of mechanisms. Probably
18 following that we will put a revised set of
19 priorities before the public for comment and we
20 will have finalized priorities, at the latest, by
21 March and we actually hope we can do it sooner.

22 In parallel with the research priorities

1 is the elaboration of the Research Agenda. A more
2 specific description of what we're going to be
3 interested in funding. But, it involves the same
4 steps of collecting stakeholder input. We think we
5 can do a lot of that concurrently, public comment
6 and a finalized Research Agenda. So, this is
7 probably conservative and there's sentiment on the
8 Board that we can and should move even quicker. So
9 I think, you know, those are outside dates for when
10 we'll have the agenda and the priorities finalized
11 and can begin issuing RFAs, RFPs.

12 The Pilot Projects work has been led by
13 Christine Goertz and Gail Hunt of the Board, and
14 again, supported by substantial staff input. We
15 posted the initial areas of interest that were
16 going to be part of these Pilot Projects and you
17 will hear more about that tomorrow. But, I want to
18 say that we got on the order of 155 statements of
19 input on our website. We reviewed them carefully,
20 synthesized them, and revised and added to the
21 areas of interest as a result of that input,
22 developed the application form and instructions.

1 We're now working very closely with NIH
2 staff because NIH, we're very happy to say, will
3 conduct the reviews. We will, PCORI, will conduct
4 the initial administrative reviews but NIH will use
5 its very finely-oiled review process to do the
6 study sections and score these applications from a
7 technical merit perspective.

8 I want to say that we will have patient
9 and other stakeholder reviewers added to the
10 standard NIH Review Committee. So, and again, you
11 will hear more about that tomorrow from Dr. Goertz.

12 And supporting the Methodology Committee,
13 the Methodology Committee's report will come later
14 this afternoon. But we facilitated the hiring of
15 interim researchers to work with Methodology
16 Committee members in getting the report sections
17 drafted and two of the working groups have now
18 posted RFPs. So this is work they need done that
19 will inform the Methodology Report. Methodology
20 Report comes out in May, but you can go to the
21 website and find two RFPs on patient-centeredness,
22 one RFP on research prioritization. And we are

1 working closely with the Methodology Committee now
2 to articulate the review process when we receive
3 these applications. The due date for these is the
4 end of September.

5 PCORI has already closed one application.
6 And this was for a piece of qualitative work to
7 help us with the over 600 statements we received on
8 our website in response to the working definition
9 of Patient-Centered Outcomes Research that we
10 posted. This RFP called for qualitative synthesis
11 of these responses for pulling out the key points
12 and messages for specifying a set of questions.
13 The synthesized information will go back to the
14 Methodology Committee and if you look at the
15 timeline at the bottom of the page, between
16 September 30 and November 15, the Methodology
17 Committee will revise the definition. And then,
18 the successful applicant for this work will spend
19 from November 15 until the end of the year doing
20 more qualitative research, getting input on the
21 revised definition.

22 We think that by the end of the year we

1 will have our working, vetted definition of
2 Patient-Centered Outcomes Research. We believe it
3 will be an important publication, and of high
4 interest to people who want to know what PCORI
5 really means when they say Patient-Centered
6 Outcomes Research.

7 PCORI staff is going to grow rapidly,
8 beginning with the hiring of additional
9 administrative assistants in mid-October. We've
10 conducted a search for a Chief Operating Officer
11 and we expect -- hope to -- you know, we've just
12 about finalized that search and we're hoping that
13 we will be able to actually have our COO in place
14 by about the first of November. Shortly thereafter
15 we'll be adding a Director of Staff, and he or she
16 will begin hiring more Program Staff to support the
17 various committees of the Board and the Methodology
18 Committee. A Director of Finance should start
19 before the end of the year.

20 We've posted for PCORI scientists. We are
21 hoping that our first scientists will be on-board
22 by early in December. About the same time, those

1 three engagement directors will appear and before
2 the Pilot Projects are funded we will have Finance
3 and Grants Administration Staff in place, so that
4 we'll be able to handle the Letters of Intent from
5 the Pilot Projects, which are due November 1st.
6 The actual arrival of the applications in our shop
7 on December 1st. The beginning of negotiations
8 with successful applicants after the funding
9 decisions are made at PCORI's March Board meeting.
10 And then, the actual issuance of the funding in
11 May.

12 I want to just say a word about -- and
13 this is a draft of a beginning of an organizational
14 chart. It says some things about our aspirations.
15 We had a healthy discussion this morning and it may
16 well not be our final organizational chart. But it
17 shows you that we see a large set of scientific
18 activities and we see a large set of engagement
19 activities. And we see those linked. So if we
20 have a research scientist or scientists who are
21 particularly interested in patient engagement,
22 they'll be working closely with the Director of

1 Patient Engagement to make sure that we actually
2 study what we're doing in a way of patient
3 engagement.

4 Similarly, if we have a research scientist
5 who is interested, and we will, who is interested
6 in stakeholder engagement; that's clinicians,
7 health systems, health insurers, employers, et
8 cetera. They'll be matched with a Director of
9 Stakeholder Engagement. And again, we will study
10 what we do and what works in a way of engaging
11 stakeholders in the research endeavor and similarly
12 with communications and dissemination.

13 So, that's the thinking to this date and
14 the staffing that we see coming within the next six
15 months.

16 So finally, just to give you a sense of
17 some milestones and activities that we'll be
18 engaged in over the next six months, between now
19 and November, in particular, we will be working
20 hard to get by a variety of means stakeholder input
21 on the National Priorities and the Research Agenda.
22 It needs to be thorough, it needs to be balanced.

1 Then that needs to be incorporated into the
2 priorities.

3 November-December we will finalize the
4 first draft of priorities, and right now the plan
5 is that it goes to public comment at that point.
6 Working on how these priorities are expressed in
7 ways that reflect the patient perspective. And
8 also, determining what are in among priorities.
9 And are there priorities that are by the Board's
10 decision left out? PCORI is going to, we believe,
11 need to focus some. So that will be a topic of, I
12 think, iterative discussions over the next two to
13 three months.

14 January and February, February will see us
15 finalizing the draft Research Agenda. And that
16 gets even more specific about what's going to be in
17 and what's out in terms of the research we'll fund.
18 And it will lead us directly to our first RFAs that
19 will be, you know, on the street not long after the
20 Research Agenda is out. But just for example, to
21 what extent will PCORI fund data infrastructure?
22 There's a great argument that's an important part

1 of a patient-centered CER agenda.

2 To what extent will translation and
3 implementation research be funded by PCORI? In
4 fact, there's arguments that it may be more
5 valuable to the public's health to work on
6 translation and implementation of research when
7 evidence is available, than on generating new
8 evidence.

9 To what extent will we focus on systems
10 research in contrast to more classic head-to-head
11 comparisons of therapies? Might we and to what
12 extent would we get involved in examining
13 pharmacogenetics? To what extent will we put our
14 funds toward funding large and perhaps costly
15 clinical trials versus typically somewhat less-
16 expensive observational studies? Those are just
17 the kinds of questions -- and I don't mean to
18 suggest that any of them have been yet addressed
19 in-depth, and certainly not answered. But those
20 are the kinds of issues that will be on the table
21 as we start to shape the agenda and drive toward
22 our first round of RFAs early in, or by --

1 certainly by mid-2012.

2 So, Gene? That's an update. And I'd be
3 happy to take a few questions if there's time.

4 CHAIRMAN WASHINGTON: Yes, there is time.
5 Why don't you -- okay. Questions, comments from
6 Board members?

7 Leah. And Leah, for those on the phone,
8 would you please give your name?

9 MS. HOLE-CURRY: Leah Hole-Curry, Board of
10 Governors. Thanks, Joe, that was great. There's
11 been a lot of work done since you've come on board.
12 So I think I can speak for all of us in saying how
13 appreciative we are that you're here.

14 I did have a question about the timeline.
15 And as you mentioned, there's some discussion about
16 speeding that up, but also wanting to understand
17 what that would mean. So, as we find more
18 information about that can we update kind of those
19 charts related to that, as we make decisions about
20 that?

21 DR. SELBY: Yes, certainly. The question
22 about the timing focuses, to some extent, on what's

1 meant in the statute by public comment. So as some
2 people read the statute, we would spend a fair
3 amount of time developing the National Priorities,
4 taking them to stakeholders, getting their input,
5 and coming up with a kind of completed draft.
6 Maybe you could say our best shot and putting that
7 out for public comment.

8 Another interpretation might be that that
9 process of engaging stakeholders is an iterative
10 process which is itself public comment. And, you
11 know, I frankly think that that's something the
12 Board has not entirely worked through yet. But it
13 likely does have some implications for the exact
14 timing of the completion of the National Priorities
15 and the Research Agenda.

16 CHAIRMAN WASHINGTON: I thought I saw
17 another hand. Okay. And Joe, I would just
18 reiterate what Leah Hole-Curry just said regarding
19 the amount and quality of work that has been done
20 under your leadership. And certainly, I have felt
21 a great deal of relief since you arrived, just in
22 terms --

1 DR. SELBY: That's the idea.

2 CHAIRMAN WASHINGTON: -- of operations of
3 the Institute. So, we're glad you're on board.

4 I did forget to have the minutes approved.
5 This seems to be a recurring theme.

6 [Laughter.]

7 CHAIRMAN WASHINGTON: So, can I have a
8 motion please regarding approval of the minutes
9 from the last meeting?

10 UNIDENTIFIED BOARD MEMBER: So moved.

11 CHAIRMAN WASHINGTON: Okay.

12 UNIDENTIFIED BOARD MEMBER: Second.

13 CHAIRMAN WASHINGTON: Are there comments?

14 DR. BARKSDALE: Again, I was omitted.
15 Debra Barksdale. I was omitted from the minutes.
16 I was here, really.

17 CHAIRMAN WASHINGTON: Okay. Is there
18 evidence that you were here?

19 UNIDENTIFIED BOARD MEMBER: I saw her.

20 [Laughter.]

21 CHAIRMAN WASHINGTON: Okay, okay, okay.
22 So we will add Debra's name.

1 MS. SLUTSKY: Gene? This is Jean Slutsky.
2 Could you make sure that Carolyn Clancy was noted
3 that she was also at the July meeting?

4 CHAIRMAN WASHINGTON: Okay. So corrected.
5 So, I have a motion and second with modification to
6 include the addition of the two Board members who
7 were present but not listed.

8 All in favor?

9 [Chorus of aye.]

10 CHAIRMAN WASHINGTON: Okay. All opposed?

11 [No response.]

12 CHAIRMAN WASHINGTON: So the motion is
13 carried. Okay.

14 Sorry. Steve, you played an integral role
15 in helping us to forge ahead in this important area
16 of patient engagement. So do you want to introduce
17 this next topic, please?

18 VICE CHAIRMAN LIPSTEIN: Thank you. My
19 name is Steve Lipstein. And let me just add my
20 welcome to that that Gene expressed to those of you
21 who have come to observe the meeting for the next
22 day and a half. It's great to be here in Seattle.

1 And Leah, just another word of thank you for being
2 our host. This is just -- it's been a remarkable
3 visit and Seattle is so beautiful. And the sun is
4 out today, and for those of you who are watching on
5 webcast. So, it's great to be over here in this
6 part of the country so that we can extend the work
7 of PCORI to even more people and more stakeholders.

8 And toward that end, Mr. Chairman, we
9 convened a working group of the Board with Gail
10 Hunt and Larry Becker and Sharon Levine and Harlan
11 Weisman and Allen Douma and Freda Lewis-Hall, who
12 is not here today, and Ellen Sigal. I don't know
13 if Ellen is up there in the sky listening in or
14 not. Ellen, are you up there?

15 [No response.]

16 VICE CHAIRMAN LIPSTEIN: Anyway, it was a
17 great working group and as Joe mentioned, the group
18 developed really two products that Gail Hunt and
19 Larry Becker are going to speak to on behalf of the
20 working group.

21 The first product, which has already been
22 kind of adopted and put on the website, is the

1 position description for the Director of Patient
2 Engagement. The second product are a series of
3 kind of guiding principles that we would like for
4 the Board to consider with regard to the creation
5 of advisory panels. And so, Gail and Larry are
6 going to explain that on behalf of the working
7 group, and then we'll open it for discussion.

8 CHAIRMAN WASHINGTON: Thanks, Steve.
9 Gail, are you going first?

10 DR. HUNT: Yes, I'm going first. And then
11 Larry, we're going to kind of tag team, okay?

12 MR. BECKER: Tag team --

13 DR. HUNT: Okay, I'm hitting the --
14 nothing's happening.

15 UNIDENTIFIED SPEAKER: You need lessons
16 from Arnie.

17 [Off microphone discussion about slides.]

18 DR. HUNT: Oh, so the COEC was supposed to
19 have been first?

20 UNIDENTIFIED SPEAKER: No.

21 DR. HUNT: Oh, okay.

22 UNIDENTIFIED SPEAKER: I don't think there

1 are slides, Gail.

2 DR. HUNT: Well, yes. They're -- okay,
3 all right. Maybe there aren't slides, sorry,
4 sorry.

5 All right, so how do we go blank? There
6 we go.

7 So, basically our working group had
8 decided that the PCORI advisory panels would be
9 characterized across four dimensions. Subject
10 matter, that's the questions and topics of
11 discussion that they would have their charter
12 duration, longer versus shorter duration.
13 Membership, individual stakeholder segments versus
14 multi-disciplinary, and their experience base.
15 That is patients both active, former, and chronic;
16 family caregivers, clinicians, professionals,
17 researchers, applicants, and policymakers.

18 So with regard to subject matter I'm just
19 going to talk to the first couple and then Larry's
20 going to take over. Each advisory panel for PCORI
21 would have a specific charter that would clearly
22 define the questions to be asked of the advisory

1 panel, the problems to be addressed or the topics
2 for discussion. So, what content is in scope, what
3 content is out of scope for them? Each such
4 charter would delineate the panel's intended
5 duration, membership descriptors, and the requisite
6 experience that we wanted.

7 And the concept of the advisory panel is,
8 they would provide advice and make recommendations
9 to PCORI and help inform the decisions of the Board
10 of Governors, the Methodology Committee, and the
11 Institute staff. Some meetings of advisory panels
12 would be conducted in sessions open to the public,
13 but open sessions would not be required of all the
14 panels.

15 So with regard to the advisory panel
16 members advisory panel members can, we thought,
17 really learn and grow together accumulating and
18 retaining PCORI experiences and knowledge. They
19 can advise in shaping priorities, developing the
20 Research Agenda, refining research questions, and
21 informing study design.

22 They can help to guide and improve patient

1 engagement efforts, evidence dissemination
2 approaches, and facilitate uptake and adoption of
3 the evidence by all stakeholders. They'll commit
4 time and energy to the issues that they really care
5 about, because they'll be selected on that basis.
6 Advisory panel members should know why we've chosen
7 them, what we will provide them, and what we will
8 expect of them.

9 Charter duration. They will be convened
10 on a schedule that's consistent with their assigned
11 work as specified in their charters. Some of them
12 will have charters of longer duration and may
13 consider a variety of topics during their tenure.
14 Some will have shorter duration, maybe only one or
15 two meetings, and may be asked to consider a
16 specific single topic. But all panels should be
17 chartered for an initial, specified period of time
18 subject to Board review, and then reauthorization
19 at the end of the initial period.

20 Advisory panels of shorter duration, may
21 serve as subject-specific focus groups. So if we
22 want a focus group that's going to be around a

1 particular topic we could convene an advisory panel
2 just to be of short duration, maybe even one or two
3 meetings, to serve in that capacity.

4 An advisory panel charter shall be for no more than
5 two years long, at which time they can then be re-
6 chartered for subsequent periods of up to two years
7 with the idea that the panels would be reviewed on
8 an annual basis.

9 Larry?

10 MR. BECKER: So, I'm Larry Becker.

11 So as we put this together we had a lot of
12 questions. We don't -- as this begins to -- as we
13 put panels together we're not entirely sure what
14 questions are going to be. We don't know exactly
15 how this is all going to unfold. And so, we tried
16 to cover as many bases as we could. So, the
17 membership on these may be made up of people with
18 similar experience. So it may be all patients.

19 On the other hand, it could represent a
20 mix of people. So depending on the kind of
21 question and on the kind of focus that we want to
22 have on the panel, and we tried to leave this about

1 as fluid as we could, not knowing whether and what
2 kind of questions we would ask for each of these
3 panels and what help needed to be done with each
4 question.

5 In terms of who gets on the Board, we
6 would look for nominations from a wide variety of
7 sources. So, advocacy groups, professional
8 associations might be one set. We would have open
9 solicitations where people could apply through the
10 website in giving us their background.

11 There could be recommendations from
12 methodologists, from committees, existing panels.
13 But we would take input from all quarters to try to
14 set up these panels and get them populated.

15 We would make sure that there was a
16 diversity, not only in the kinds of folks that are
17 on these panels but as it relates to age, their,
18 you know, gender, ethnicity, race, economic status,
19 geography, language could be another example of
20 where we want diversity.

21 In terms of size we had a discussion
22 about, you know, what's the optimal size? And the

1 group came to an agreement that perhaps the optimal
2 size is somewhere in the 9 to 11 member range.
3 Large enough to be representative, but small enough
4 to get the work done and to make sure that the
5 cycle time of these things are well-done.

6 So, in terms of the types of experiences,
7 you know, some of the examples that we put forth --
8 and by no means is this inclusive of everybody that
9 we would consider, but clearly active or former or
10 chronic patients, consumers, researchers,
11 policymakers, caregivers, clinicians, other
12 professionals, advocates. All walks of life, all
13 kinds of people. Again, depending on the kind of
14 questions that each of these panels is trying to
15 answer.

16 So, as we put these together, we thought
17 about how would these get staffed? How would we
18 sort of approve, put in place, the actual panelists
19 to be here?

20 And so, in step one, the staff would begin
21 to solicit, pull these things together, and make a
22 recommendation, ultimately, to the Board for the

1 membership of these panels. And the Board could
2 simply just approve it as it stands or, based on
3 some knowledge, you know question to make sure the
4 process was followed. We had the right kinds of
5 membership, that it was diverse enough, that it
6 represented the questions being answered.

7 And we think that there could be a number
8 of advisory panels at any given time. We'd look to
9 the staff; we'd look to the people at the Institute
10 to get us a sense of what's the process capability
11 here? How many of these things could we possibly
12 run at the same time to answer the questions so
13 that we can be effective.

14 And so, that leads me to my last point.
15 And that is, that we felt that we needed to make
16 sure that we had good cycle time. And in doing
17 that, we felt that we should consider putting some
18 expertise to this in terms of facilitation, in
19 terms of forming these groups, creating them with a
20 repeatable process every time. So that you know,
21 as you bring together 10 people for the first time,
22 many of whom won't know each other, they can get up

1 and running in an expeditious fashion. And that
2 every time you start to do this, everybody will
3 know what the process is. We'll learn over time as
4 we do panel after panel what they need to get up
5 and running. The statute talks about us making
6 sure that we support these people, that we get them
7 the kind of information that they need.

8 So, we'll learn over time but we've got to
9 have a good assimilation process so that our cycle
10 times are as quick as we can so we get meaningful
11 feedback in an expeditious manner.

12 So I'm going to stop there and ask for
13 questions. And Gail, did I leave anything out?

14 DR. HUNT: The only thing that I'd mention
15 is that we did talk about having this small group
16 of two or three facilitators who would be the same
17 people orienting the panels over time, because they
18 the facilitators would really get to know PCORI,
19 understand our process. It would relieve a little
20 bit of the staff. The staff wouldn't be obliged to
21 do the reorientation or the orientation of the
22 advisory panels as they each came on. And so there

1 would be a process. And those two or three people
2 would be responsible for that each time.

3 VICE CHAIRMAN LIPSTEIN: Joe, before we
4 open this to questions, Joe and Gene. Just to
5 remind the Board, as well as, those watching on the
6 webcast and those here observing, here in Seattle.
7 The statute that established PCORI encourages us to
8 make use of advisory panels to basically extend the
9 input that we have to establishing National
10 Priorities and a Research Agenda. And so, the
11 purpose of these guidelines was not to be hard and
12 fast rules, necessarily. But as we bring on the
13 Director of Patient Engagement, the Director of
14 Stakeholder Engagement, Director of Communications,
15 as well as, the scientists who will be helping with
16 gathering all that input, that we be able to hit
17 the ground running with advisory panels. And that
18 staff have kind of Board input into how the process
19 should work.

20 And so, we expect the process to be
21 iterative. And as a learning organization, we will
22 learn as these advisory panels are created. But I

1 think the Board has now at least the benefit of the
2 best thinking of these seven individuals, and again
3 I would just kind of commend them again for the
4 amount of time, energy, and thoughtfulness they put
5 into the process.

6 CHAIRMAN WASHINGTON: Steve, I'm going to
7 ask if you would direct the discussion among Board
8 members.

9 VICE CHAIRMAN LIPSTEIN: I'd be happy to.
10 Debra?

11 DR. BARKSDALE: Debra Barksdale, Board of
12 Governors. I have a question under membership.
13 And when I initially read this I was, I guess, a
14 little bit confused about where it says that
15 individuals with similar experience and expertise.
16 I think now I understand what you meant. But on
17 initial reading of this, it seemed that you would
18 want people with diverse experiences around an
19 issue.

20 I think you're using the word "experience"
21 to mean type from what you just said, patients or
22 providers. Is that correct? Can you clarify that

1 for me?

2 MR. BECKER: Yes. So, I'm not entirely
3 sure what the panel should be made up of, because
4 we don't have the questions that we're answering
5 yet. And so, we envisioned different kinds of
6 panels. So, broad diversity in terms of the skills
7 and experience in one case. But then maybe we want
8 to focus on something very specific. And so, you
9 might just have a panel of patients, as an example
10 or you might just have a panel of nurses as another
11 example.

12 On the other hand, every one of those
13 panels ought to be diverse in their experiences so
14 if it's nurses, from different places, different
15 kinds of experience in the nursing profession.

16 So, not that we know exactly what they're
17 going to be, but we tried to leave the guidelines
18 open enough so that we could be flexible based on
19 the question.

20 VICE CHAIRMAN LIPSTEIN: Debra, so one of
21 the other examples that came up during our working
22 group deliberation was if PCORI wanted to fund

1 research in a specific type of medical condition.
2 I'll pick diabetes, or you and I talked about
3 chronic pain yesterday. We might want people who
4 have had that similar experience of having that
5 medical condition, or of experiencing that kind of
6 pain. So that if we were developing research
7 questions or study design, we could be certain to
8 include the perspective of people who have actually
9 lived with that specific experience or that
10 specific condition.

11 But you are absolutely correct; there may
12 be other examples where our research will be cross-
13 cutting. And we will want a diversity of
14 experiences and a mixture of perspectives in the
15 room at the same time.

16 DR. WEISMAN: I think, you know, some of
17 this is designed, Debra, to allow a formal
18 chartering process so that it's really clear what
19 the questions are and whom should be on the
20 committee. So they may be very uniform in
21 experience under one realm, but very diverse in
22 another depending on the question.

1 But the idea here is, and this guideline
2 is to have whatever group is asking for this
3 advisory panel be very thoughtful in specifying
4 what's important in terms of the various
5 characteristics of the members.

6 VICE CHAIRMAN LIPSTEIN: That was Harlan
7 Weisman. Do we have to announce who we are again?
8 Because it's webcast, they know who we are.

9 DR. WEISMAN: Thank you, Steve.

10 VICE CHAIRMAN LIPSTEIN: Okay. Sharon.

11 DR. NORMAND: Hi, I'm Sharon-Lise Normand
12 from the Methodology Committee.

13 So I actually had two questions. Might be
14 a little mundane, but the first question relates to
15 have you thought of criteria that you're going to
16 use for reappointment? You talk about
17 reappointment, and I'm not sure what that means.
18 Maybe they're fatigued or they're not -- I mean,
19 did you have some discussion about what criteria
20 were needed for that? And then, maybe I'll say my
21 second question.

22 And I don't know, I have no idea if this

1 is applicable or not for these panels. But often
2 you think of advisory panels, you think of conflict
3 of interests. And is this at all applicable to the
4 panels?

5 And I can imagine in some situations where
6 it may be, and maybe somewhere that's silly to even
7 think about. But I just wondered if the committee
8 thought about those two things.

9 VICE CHAIRMAN LIPSTEIN: Sharon-Lise, I
10 think I'll let other members of the panel bring up
11 -- the second issue I know we didn't discuss.

12 DR. WEISMAN: This is Steve Lipstein.

13 VICE CHAIRMAN LIPSTEIN: Oh, this is Steve
14 Lipstein. That's right. Thank you, Harlan.
15 Harlan and I will watch out for each other in this.

16 I know we didn't discuss the conflict of
17 interest issue. So I think that that's a very good
18 point that we'll have to double back and pick up
19 on.

20 The first issue was, and I guess Sharon
21 Levine can speak to this. Sharon kind of
22 encouraged us to make sure that the panels were

1 reviewed annually. So, that we could see if they
2 were on charter, if they were producing the kinds
3 of work that they were intended to produce, and
4 then, at least after two years to get a sense of
5 whether they should be re-chartered or whether or
6 not the same issues should be repopulated with
7 other individuals who could then add even
8 additional perspectives.

9 But all we got to, I think -- Sharon, keep
10 me honest or Larry, is that we got to the fact that
11 they should be subject to annual review and re-
12 chartering every two years. But that's about -- I
13 don't know that we discussed criteria. Larry?

14 MR. BECKER: This is Larry Becker. So,
15 the other thing is, I wouldn't want to leave the
16 impression, either, that every panel is two years
17 long. So, some panels might be a question. And in
18 three months, they can provide the input to the
19 question.

20 So it's going to be sum and some, relative
21 to the question being asked.

22 DR. WEISMAN: This is Harlan Weisman

1 again. The chartering template that we developed,
2 actually says it's a maximum of two years. And I
3 think the same would be true with the one-year
4 review. So, we're just again, asking whoever is
5 asking for the panel, whatever group, that they're
6 very thoughtful in thinking about it and thinking
7 about what they think the duration should be, what
8 a reasonable duration should be, and putting that
9 limit so that we're very clear not only to
10 ourselves when we charter the group but also to the
11 members that there is aligned expectations on what
12 the deliverables are and for the length of service
13 that we're asking for.

14 I think, you know, there's a lot of
15 discussion that we thought a lot of the work should
16 be done in less than, you know, in two years or
17 less. But, you know, it's conceivable that it
18 might be longer. And Sharon-Lise, it's a great
19 question. I almost wonder whether we'll have to
20 learn as we go about what are the criteria,
21 assuming that most of them will finish their jobs
22 right away or within the original charter.

1 VICE CHAIRMAN LIPSTEIN: Sharon and then
2 Ethan.

3 DR. BASCH: Hey, Steve.

4 DR. LEVINE: I think it's a great
5 question, and I think at least in my own mind, we
6 spent a lot of time talking about what the -- that
7 we had an obligation to the panel members to be
8 very clear up front about what the expectations
9 were. And as Larry said, to provide the support
10 and resources necessary for them to carry out what
11 they were committing to.

12 I think we all are somewhat concerned
13 about not frustrating people, particularly as we're
14 learning more about this process. And I think one
15 of the obligations we have as we charter these
16 panels, though we didn't specifically speak to it,
17 is to say what we anticipate the timeframe to be,
18 under what circumstances we believe it would need
19 to be extended, and what the criteria would be. We
20 just haven't fleshed it out. But it's a good point
21 and I think it does deserve some consideration.

22 And it may be different for different

1 panels. But we could probably come up with some
2 general criteria.

3 VICE CHAIRMAN LIPSTEIN: Ethan?

4 DR. BASCH: Sure. Hi, Ethan Basch from
5 the Methodology Committee. I just wanted to
6 mention that later today in this meeting we'll be
7 presenting the ongoing work of the Methodology
8 Committee's Patient-Centeredness Work Group, which
9 has as its focus developing methods and standards
10 for integrating the patient perspective into the
11 selection of research questions and the design of
12 CER and PCOR research. And it would seem
13 reasonable to coordinate this effort, since some of
14 these methods will involve how to engage various
15 stakeholders in different contexts, including
16 stakeholder panels.

17 VICE CHAIRMAN LIPSTEIN: So I think,
18 Ethan, towards that end one of the things that we
19 envision now was that this particular work group
20 would disband, but the product of our effort would
21 be now shepherded by staff to incorporate what the
22 Methodology Committee has been working on, as well

1 as these suggestions that Sharon-Lise just came up
2 with, and the additional input gathered here today.

3 Bob, then Leah.

4 DR. ZWOLAK: Bob Zwolak. Larry, do you
5 envision standing panels? I realize a panel has to
6 be renewed annually and the duration of the charter
7 would be two years, but do you see panels that
8 would be so critical that they would be renewed in
9 perpetuity?

10 MR. BECKER: So, this is my opinion. In
11 perpetuity, personally, I don't think so. I think
12 that when you name a panel of 11 to 12, 10,
13 whatever number of people you have, you by
14 definition begin to focus them based on their set
15 of experiences. And I think that in order to make
16 sure that all views are considered, I don't think
17 anybody would get a lifetime membership on one of
18 these panels. I think that you need to change; you
19 need to be able to incorporate different views over
20 time.

21 VICE CHAIRMAN LIPSTEIN: Bob, this one got
22 a lot of conversation at the working group. It was

1 deliberated, and we started off with a construct of
2 standing versus ad hoc. And then we moved to a
3 more flexible construct which was longer duration
4 versus shorter duration.

5 But there was a suggestion made that we
6 talked about, which was should there be, for
7 example, a patient advisory panel that would last
8 for the duration of PCORI the same way we have a
9 Methodology Committee that lasts for the duration
10 of PCORI? And I think what we concluded was, that
11 wouldn't involve enough people. In other words,
12 there aren't 9 to 11 people out there that could
13 speak on behalf of all the patients in the country.
14 And that it might be better if we convened multiple
15 advisory panels made up of patients and we're more
16 inclusive so that we could actually hear more
17 voices.

18 But we struggled with a concept of finding
19 9 to 11 people that would represent patients across
20 the United States of America, representing all the
21 different kinds of sub-populations and medical
22 conditions that we've been encouraged to consider

1 as part of our work. But we did talk about it a
2 lot as a working group. And so, it was a very
3 important part of what we've considered.

4 Leah?

5 MS. HOLE-CURRY: Leah Hole-Curry, Board of
6 Governors.

7 So, this is great work. It's really
8 helpful. We've been talking in the Program
9 Development Committee around -- and we're going to
10 hear later tomorrow on National Priorities and the
11 Research Agenda. And the statute talks about this
12 being a place where PCORI may invoke these advisory
13 panels.

14 So, two questions. One is, I didn't see
15 triggers in here for this. And I know we've
16 received some public comment already, and in our
17 statute it says we shall if we have any rare
18 disease research have an advisory committee. So,
19 should we put something in here in this framework?
20 Or is that really an implementation issue for
21 staff?

22 And then just using this framework, maybe

1 some of the first test cases might be an advisory
2 group around National Priorities and the Research
3 Agenda. So, is that back to this work group? And
4 I think I heard the answer is that this is going to
5 move to staff, then?

6 VICE CHAIRMAN LIPSTEIN: Yes. So,
7 hopefully once we recruit the directors -- the
8 three directors, Patient Engagement, Stakeholder
9 Engagement, and Communications. As Leah, for
10 example, if we wanted to trigger the creation of an
11 advisory panel, so one of the things we did discuss
12 as a working group is, who gets to come up with an
13 idea to create one of these? And we pretty much
14 concluded everybody has the opportunity to suggest
15 that we create one of these. But once we do, then
16 staff would develop a charter that would be subject
17 to Board approval.

18 So, Board could initiate this.
19 Methodology Committee -- what we may get
20 suggestions from the broader stakeholder community
21 to do this and so we didn't want to limit that.

22 But you're right. There may be

1 consideration given to when either a patient group
2 or a particular problem should trigger a panel.

3 MS. HOLE-CURRY: Okay, thanks.

4 VICE CHAIRMAN LIPSTEIN: Any other
5 comments, suggestions? There's this guy raising
6 his hand and holding up three, four -- like he has
7 four ideas. But I think he's just timing the
8 webcast.

9 Mr. Chairman, I think that again, this is
10 just a -- I think the working group felt as though
11 the creation advisory panel holds great promise as
12 a source of input. And both into framing the
13 questions, the design of the research, and then
14 importantly, and again, Sharon often reminds us
15 that. And then, when we get into the whole sphere
16 of how we communicate, disseminate, implement, and
17 uptake, advisory panels can play a very, very
18 important role.

19 So, we're hoping that our guidelines will
20 be helpful and that we'll soon be creating our
21 first panels.

22 CHAIRMAN WASHINGTON: Thank you, Steve.

1 This is a topic that we will be discussing in an
2 ongoing manner. And while we're not posting these
3 proposed guidelines for official public comment, we
4 would encourage anyone that's listening or anyone
5 that's present here to send us comments on the
6 website. In fact, I would underscore that we
7 welcome comments on any of the topics that we are
8 discussing today and we do take them seriously.
9 And you can just send them to PCORI.org.

10 Okay. So, the next topic for discussion
11 is a report from the Dissemination Work Group,
12 which is being co-chaired by Dr. Sharon Levine and
13 Dr. Carolyn Clancy.

14 Carolyn, are you on the line?

15 [No response.]

16 CHAIRMAN WASHINGTON: Okay. So Dr.
17 Levine.

18 DR. LEVINE: Thanks, Gene. Thanks so
19 much. And as Gene said, Carolyn and I, actually we
20 convened the first meeting of this Dissemination
21 Work Group last Tuesday. So this was our first
22 time to get together

1 And as Gene said, it is a joint working
2 group not just co-chaired by Carolyn and myself,
3 but a joint working group between AHRQ and PCORI on
4 dissemination. The members of the group include
5 Joe Selby, Gray Norquist, Freda Lewis-Hall, Gail
6 Hunt, the tag team of Brian Mittman and Robin
7 Newhouse representing the Methodology Committee,
8 Jean Slutsky and Howard Holland from AHRQ, and Gail
9 Shearer and Richard Schultz are also participating
10 in the meeting.

11 And as we do with many of the things that
12 we do when we start something new, we go back and
13 look at the statute and what does the statute say?
14 And clearly, the rationale for a joint working
15 group is that very clearly within the statute, the
16 responsibility for dissemination, which is not
17 defined. So like Patient-Centered Outcomes
18 Research, it is not defined, which we see as a
19 blessing actually, and a gift. And making
20 available the results of research -- are clearly
21 established. And I'm going to just review for the
22 Board what the statute actually says.

1 Dissemination in the statute, and I want
2 to thank Richard Schmitz for doing a word search
3 for me, is referenced in relationship to AHRQ and
4 in specific, the Office of Knowledge Transfer and
5 Communication. PCORI's responsibility is, at a
6 minimum, that we make information available to the
7 public through our website based on the information
8 in the research that is conducted by the Institute.

9 So, at least in the drafters of the
10 statute there was some distinction between
11 dissemination and making available. And Carolyn
12 from the very beginning, has said that one of the
13 opportunities we have as PCORI in this arena of
14 dissemination is there are things that a government
15 agency cannot do that PCORI, as a non-profit
16 independent 501(c)3 actually has the availability
17 or the opportunity to do. Things like conducting
18 surveys.

19 And so our group, I think, is interpreting
20 what the statute says as the minimum of what we can
21 do. But there is nothing within the statute that
22 limits our engagement in this work to "making

1 available through our website."

2 And so we began our first call together,
3 and Carolyn did a lovely job of sort of giving a
4 broad overview both of sort of where AHRQ and, in
5 particular, the Effective Healthcare Program and
6 the Office of Communications and Knowledge Transfer
7 have been. And we will be scheduling and
8 conducting a more in-depth briefing of the working
9 group on all of the work done, both under ERA,
10 under the ERA funding as well as through the
11 Effective Healthcare Program on dissemination. And
12 quite honestly, what they've learned about what
13 works and what doesn't work. And I know that AHRQ
14 has some pretty interesting projects going on right
15 now trying to actually address not just
16 dissemination, but figuring out how to actually
17 increase and measure the uptake of research
18 findings in the broader communities, both patient
19 communities as well as provider community.

20 So as we begin our work, our first
21 meeting, someone summarized and I can't remember
22 who in the work group summarized what this is all

1 about. Which is, fund research to learn what works
2 for whom and under what circumstances. And then,
3 figure out how to get the information out to people
4 who can use it and get the information out in a
5 manner that is accessible and highly useful to
6 people who can use it in order to make the best
7 possible decisions about their health.

8 And so, our focus is really on how do we
9 ensure that the information, the evidence, and the
10 research findings are translatable to the point of
11 decision-making in the clinical environment.
12 Whether that's in self-care for someone engaging
13 with themselves in self-care, a physician and
14 patient making decisions together, or a patient
15 confronted and physician confronted in the hospital
16 with choices around interventions in a significant
17 condition -- serious condition.

18 Our work plan which is really what we were
19 here to, want to bring to you today, as I said,
20 AHRQ is going -- AHRQ -- Howard Holland and Gene, I
21 think, are going to -- and Carolyn are going to do
22 a briefing for the PCORI members of the working

1 group. One of our interests and challenges is to
2 bring the working group members up to a level
3 playing field in terms of understanding what has
4 been done and what is out there. And looking at,
5 again, the implications of the legislation on how
6 we could begin to approach potentially developing
7 and enhancements to what -- to the kinds of things
8 that are going on. And looking at unique and novel
9 ways to not only disseminate and facilitate uptake,
10 but also to measure the impact. And I think this
11 is one of the big gaps is, how do we know we're
12 making a difference? And what are the metrics we
13 might possibly use to measure the impact of novel
14 methods of dissemination?

15 An additional briefing, our second large
16 work group meeting or second work group meeting is
17 going to be to review the results of research done
18 by RAND for the Secretary of Health and Human
19 Services using five case studies of major clinical
20 trial findings. I don't remember all five but
21 KATIE [phonetic] and, I think, COURAGE were two of
22 the five.

1 So what happened when the research
2 findings were released to the professional
3 community and through *USA Today* and *Wall Street*
4 *Journal* and many of the local newspapers? What
5 happened? And it's qualitative research, not
6 quantitative research. It's just case studies
7 interviewing multiple stakeholders about not only
8 what happened but actually, what didn't happen in
9 response and why. And I think, and Carolyn
10 reminded us that what has now become sort of
11 medical wisdom that it takes 17 years to translate
12 a research finding into a change in clinical
13 practice just is too long. And what is it that we
14 can contribute in that arena?

15 I think we're also mindful of the fact,
16 and Gray reminded us, that we don't want to revisit
17 work that's already been done. We really do need
18 to look for unique opportunities where PCORI in
19 concert and partnership with AHRQ can add value and
20 bring to the work things that have not already been
21 done. So, we aren't interested in reworking or
22 redoing the work that is already done. And then

1 ultimately, once the work group feels it has been
2 steeped sufficiently in understanding what the
3 current research or at least the current wisdom is
4 around dissemination -- is, we're going to need to
5 figure out and define the scope of work that we're
6 going to get engaged in.

7 And I'll -- just as an example, one of
8 the questions that was raised in our conversation
9 was, where on the spectrum of dissemination does
10 PCORI want to play? Is it just about getting
11 information out in more effective ways through
12 different channels and getting it out to, for
13 example, trusted intermediaries I think was the
14 term used; professional societies, consumer
15 organizations. And that that handoff would be what
16 PCORI would do versus understanding that real
17 impact comes from behavior change. And that it's
18 only when we understand how to translate the
19 research findings into meaningful behavior or
20 behavior change at the point of use of the
21 information that we will actually achieve the
22 return on investment on the research that PCORI is

1 going to do.

2 And so, how far down the pathway of
3 getting involved in doing research around behavior
4 change and engaging PCORI as an Institute and going
5 beyond the handoff to others but actually directly
6 getting involved in trying to facilitate uptake and
7 utilization of information by both patients and
8 consumers. The patients, consumers, and providers.

9 So at some point down the road, not too
10 far down the road, we will have a more in-depth
11 discussion around so where in this spectrum and
12 what is the work PCORI can do. We have a little
13 time, because we don't have any research findings
14 at the moment to disseminate, on the one hand. On
15 the other hand, the question has been raised are we
16 limited to dissemination of the research findings
17 that come from the research we are going to fund
18 some time in 2012. Are there other things that we
19 ought to think about or include in this process of
20 dissemination and uptake?

21 And again, that's something I think that
22 the group will struggle with and hopefully be

1 prepared to come back to the Board with
2 recommendations. At least in terms of how to think
3 about this and where we want to go with that.

4 Did you have a question?

5 MR. KRUMHOLZ: Harlan Krumholz. I was
6 just wondering to the extent to which you're
7 thinking about tools and incentives to facilitate
8 the dissemination. Because part of this will be
9 about both providing the vehicles and means to do
10 it, but also creating the milieu that is drawing
11 out, you know, where we create the demand for the
12 information, not just -- I think when we just push
13 out we're competing with a lot of other
14 information. But if you can create the right
15 circumstances where actually people are pulling
16 information, not having it pushed at them, and sort
17 of figuring out how we do that well might even be
18 the subject of some of the work that we might fund
19 in order to -- as I've said before, I don't think
20 we adequately employ the social scientists in
21 medical research. We don't bring in cognitive
22 psychology and sociology and anthropology

1 concerning cultural issues.

2 And really, you know, we advance our basic
3 biological sciences much faster than we are doing
4 our social science knowledge within medicine. I
5 mean, social science work all the time in a lot of
6 different areas, but we're not integrating it into
7 the medical research area to the extent that it
8 really potentates the kind of thing you're talking
9 about.

10 And, of course, when we talk about
11 dissemination we're also talking about
12 implementation. That is not merely spreading that
13 knowledge, but having it be embedded and useful to
14 people. That is, how do we create it so that it's
15 going to be useful?

16 DR. LEVINE: I can give you my personal
17 opinion about that. We haven't had -- it's exactly
18 the conversation we need to have. And I would put
19 incentives in quotes among tools. I mean, I do
20 think we need to look at what are the potential
21 tools to facilitate uptake and utilization of the
22 information. And how involved do we want to get?

1 Personally, it's a passion of mine. So if
2 I could commit PCORI, I'd say the whole way. I
3 mean, we ought to own this. What did Gene say
4 yesterday? Seize the mandate. Create a mandate
5 and seize it.

6 But I think that's a conversation the
7 Board really needs to get involved in.

8 CHAIRMAN WASHINGTON: Okay.

9 DR. WEISMAN: Harlan Weisman. You know,
10 one of the early conversations we had before when
11 we were talking about what kind of grants we wanted
12 to fund was that -- was not just to fund research
13 that talks about engagement, but to fund research
14 in which engagement and the handoff isn't just part
15 of it, but the change in behavior, if that's
16 necessary, is part of it that we ask our
17 researchers who are applying to us to take that on
18 seriously as part of their research proposal.

19 And, you know, I was given the framework
20 of different ways of communicating four levels.
21 One is telling people something, one is selling an
22 idea to them, another one is engaging them, and the

1 other one is getting true commitment. And, you
2 know, I can tell somebody as a cardiologist, you
3 know, you should use a treadmill because it will
4 help you exercise. Exercise is good for you. And,
5 they'll forget.

6 Telling is good when you see somebody
7 stepping off the curb and there's a bus coming and
8 you say, jump out of the way, there's a bus coming.
9 That's -- telling is usually effective there but it
10 isn't in other settings.

11 Selling works like if you want them to buy
12 the treadmill, the salesman is very good at getting
13 them to buy the treadmill, but they're still not
14 going to use it. So engaging would be having the
15 conversation with them about the benefits and
16 what's important to them. And showing them how
17 that might be an important part of their life if
18 they were to do it. But commitment is really, you
19 know, getting them to say this is something really
20 important to me. And that's a very different level
21 of talking or communicating.

22 And I would -- I agree with you, Sharon.

1 I think we should be in that engaging commitment
2 territory as opposed to just telling, because
3 telling doesn't work. Everybody knows exercise is
4 good for you and smoking is bad for you, but there
5 are a lot of smokers out there and there are a lot
6 of people who don't exercise. So, telling isn't
7 usually sufficient.

8 DR. LEVINE: One other thing I do want to
9 mention is that Brian Mittman is an active member
10 of the group. And Brian is committed to
11 essentially trying to help us figure out in sort of
12 a, I'm going to use the term landscape review, but
13 it's not really -- it doesn't fully explore it.
14 Sort of what the gaps are and how we can mind the
15 gaps, if you will, both in terms of research --
16 methodologic research, as well as, traditional
17 research in terms of trying to answer the question
18 about what is effective and what is most
19 successful.

20 CHAIRMAN WASHINGTON: Allen, please.

21 DR. DOUMA: Allen Douma, sorry. I want to
22 really confirm what both Harlans are saying and

1 what you're saying about your passion.

2 I think this is a critical issue. It is
3 the core, really, of what is preventing most of
4 comparative effectiveness research being effective
5 because it's not being utilized. And I think
6 particularly Harlan 1, that the use of the --
7 Harlan Krumholz, the use of the word "demand" --

8 UNIDENTIFIED SPEAKER: What is 1? Is it
9 actually Obi-Wan?

10 [Laughter.]

11 DR. DOUMA: Obi-Wan Kenobi.

12 DR. WEISMAN: Harlan 2 tries harder.

13 [Laughter.]

14 DR. DOUMA: And he does a good job. The
15 whole concept of demand is core and critical to
16 what we are talking about. I think it's also
17 important to understand that there are three
18 different types of demand. There's demand from the
19 patient, there's demand from the provider, and
20 there is demand from the team -- the patient-
21 provider team. And it's to the extent that we can
22 really get that team to demand what we're talking

1 about will be most successful.

2 CHAIRMAN WASHINGTON: Gray and then Leah.

3 DR. NORQUIST: Yeah, Gray Norquist. As
4 someone else on the work group with the same
5 passion, because I think that Sharon and I have
6 both felt that way.

7 I think our key issue right now is really
8 to interface. And I'm looking at Jean because
9 she's representing AHRQ, is to figure out exactly
10 what AHRQ is going to do. What others -- and
11 figure out what our unique role may be in this. It
12 may be the patient-centeredness, which is not
13 something that really I think has been there. That
14 may be something that we can do or maybe some
15 particular areas.

16 And so, that's the key issue we have to
17 address first, and then put our passion to work in
18 the areas that make the most sense.

19 CHAIRMAN WASHINGTON: Excellent point.
20 Leah?

21 MS. HOLE-CURRY: I withdraw, that's what I
22 was going to ask. I think we do need a report from

1 AHRQ about the funding mechanisms and their plans
2 to spend, even if we don't have dissemination --
3 PCORI-specific dissemination activities right now.

4 DR. NORQUIST: And I think the good thing
5 is that they're willing to work with us. And I
6 think that's a very good thing about this. Is a
7 true collaborative process, and I think to Carolyn
8 and Jean's credit is that their interest here is
9 just not having money and doing their own thing,
10 but that they really want to work with us. And so,
11 I think that's another key aspect of this.

12 CHAIRMAN WASHINGTON: But what I also hear
13 you saying is that, Gene Washington, is that we
14 should be quite discriminating as we make decisions
15 about our investment and what we're going to pursue
16 in this area. And I think it's a key point. Jean,
17 please.

18 MS. SLUTSKY: Yeah, Jean Slutsky. I
19 actually have to say, I've never been to a meeting
20 where there have been so many duplicate names. So,
21 but -- Jean is easier than Harlan, no offense or
22 anything. Thank God my mother didn't name me

1 Harlan.

2 [Laughter.]

3 MS. SLUTSKY: So -- no offense taken. As
4 a woman, right.

5 I just wanted to tag on to what Gray said.
6 You know, one of the things that we know about
7 research and dissemination, translation, and
8 implementation is that it's a multi-factorial
9 process. And that you need to use a lot of
10 different mechanisms, methods, and approaches to
11 reach audiences. It's really hard.

12 So, that's what's really exciting about
13 both of these organizations being charged to look
14 at dissemination and implementation and
15 translation, because that provides the opportunity
16 to explore all the different avenues and venues to
17 actually look at this from a holistic point of
18 view.

19 DR. LEVINE: Can I just make one final --

20 CHAIRMAN WASHINGTON: Yes. You're going
21 to have to wrap it up, because we've got to move to
22 the public session.

1 DR. LEVINE: Yes, sir. One final comment,
2 which is that this work group is made up of a
3 representative group from the PCORI Board. And
4 that also to point out, that in the statute the
5 Office of the Controller General at a minimum of
6 every five years is directed to evaluate the
7 success of our dissemination efforts on changing
8 the health status of Americans. And so, there
9 really is an endpoint here where the Office of the
10 Controller General is supposed to look at our work
11 and say, this work, this dissemination work,
12 actually made an impact and changed the way people
13 get healthcare services or health services, and the
14 way they approach making health decisions. So,
15 that's in the statute, which is great.

16 CHAIRMAN WASHINGTON: That's great. It's
17 a high bar but we always should expect great things
18 from this group.

19 DR. LEVINE: Thanks.

20 CHAIRMAN WASHINGTON: Thank you, Sharon.
21 Okay. We now will move into the public comment
22 period, which is scheduled for the next half an

1 hour. And we have three individuals that have
2 signed up. And after we hear from these
3 individuals, then we will go to the phone line to
4 see if anyone would like to comment.

5 I would, again, encourage our participants
6 to limit your comments to three minutes. And I'm
7 going to turn it over to Richard Smith.

8 MR. SMITH: All right, we'll use this
9 podium for the public comments. And I'll call the
10 individual's name and their affiliation, and just
11 repeat your name and affiliation when giving your
12 remarks.

13 The first commenter is Eric Nilsson of
14 Insilicos.

15 MR. NILSSON: Hi. Thanks for the
16 opportunity to talk to you today regarding this
17 very important subject of comparative
18 effectiveness. Can you hear me? Yeah?

19 My name is Eric Nilsson, and I am
20 President of Insilicos, a Seattle company
21 developing diagnostics for cardiovascular disease.
22 Our goal is to fundamentally improve the way

1 atherosclerotic disease is diagnosed and treated.
2 I'm also here today on behalf of the Washington
3 Biotechnology and Biomedical Association, whose
4 motto is -- it's new, so I have to read it,
5 "Innovation realization from breakthrough
6 discoveries to better health solutions."

7 And, my message here is pretty simple.
8 Thank you for what you do. It's important. And
9 place the needs of patients first and continue to
10 maintain a high level of transparency and openness.

11 It's ironic as I was preparing my written
12 comments, which you have, but I was also dealing
13 myself with someone very close to me who was
14 dealing with a difficult medical, and probably,
15 intractable medical condition. And, I guess you
16 have access to a lot of very compelling patient
17 testimony, so I have nothing very remarkable to
18 report there. I, in fact, have something very
19 unremarkable, which is, we will all ultimately be
20 patients. And when we are, we will make different
21 choices because we're different people.

22 So, one of the things that CER can do is

1 make the choices that we and those close to us will
2 face simpler. But CER can't replace those choices.
3 That we will, ultimately, as patients need to make
4 those different choices.

5 And that's the message that the people who
6 have dedicated their lives to biomedical research
7 that I indirectly represent through WBBA and the
8 people that I work with, would like you to hear
9 today.

10 Thank you.

11 CHAIRMAN WASHINGTON: Thank you, Mr.
12 Nilsson.

13 MR. SMITH: Our second commenter is Barak
14 Gaster of the Consortium of Academic Health Centers
15 for Integrative Medicine, and an Associate
16 Professor of Medicine at the University of
17 Washington School of Medicine.

18 MR. GASTER: Good afternoon. My name is
19 Barak Gaster and I am an Associate Professor of
20 Medicine at the University of Washington and I'm
21 here representing the Consortium of Academic Health
22 Centers for Integrative Medicine, which includes 50

1 premier academic centers in large medical systems
2 around the country, including UCSF, Duke, and Yale.
3 Which are dedicated to the study of
4 integrative/complimentary medicine.

5 This consortium and the field of
6 integrative medicine in general is, by definition,
7 interdisciplinary; including physicians, nurses,
8 and healthcare professionals of all kinds,
9 including public health professionals. All health
10 professions are important to patient-oriented
11 research.

12 I'd like to thank you for the opportunity
13 to speak and say how supportive I am of the work
14 that you're doing. In the two decades that I've
15 been practicing medicine, teaching students, and
16 doing research it is, indeed, a struggle to have
17 such a giant gap in terms of what we need to know
18 in order to make good comparative decisions for our
19 patients.

20 My academic career has been dedicated to
21 understanding the evidence behind
22 integrative/complimentary medicine. I've

1 approached this topic as an open-minded skeptic
2 working hard to bring disparate results together
3 that doctors, patients, and students can use to
4 know what works and what doesn't.

5 When I first began working in the field of
6 integrative/complimentary medicine 15 years ago I
7 often wondered whether it would just be a fad which
8 would fade. The data, however, now speaks strongly
9 that this is not the case. That
10 integrative/complimentary medicine is becoming more
11 mainstream and more utilized side-by-side with
12 conventional medicine.

13 Given the continued heavy utilization by
14 the U.S. public, I strongly encourage PCORI to
15 include in its strategic planning the study of
16 integrative/complimentary therapies, given that
17 these therapies are generally safe and are
18 perceived by many patients to be very effective.

19 From a patient-centered point of view, the
20 study of integrative/complimentary medicine is
21 crucial so that we can understand especially from a
22 systems point of view what works and what doesn't.

B&B REPORTERS
701 Copley Lane
Silver Spring, MD 20904
[301] 384-2005

1 There are many leaders in academia, including many
2 at the Consortium of Academic Health Centers for
3 Integrative Medicine who have the scientific
4 expertise to help make integrative/complimentary
5 medicine more evidence-based, and I encourage you
6 to help us to achieve that goal.

7 Thank you very much. I am happy to answer
8 any questions.

9 CHAIRMAN WASHINGTON: Okay. Thank you,
10 Mr. Gaster.

11 MR. SMITH: Our third commenter is Robert
12 Cihak [phonetic].

13 DR. CIHAK: Thank you, Richard. That's
14 one of the many acceptable pronunciations of my
15 name. I say it Cihak. I didn't even know how to
16 spell it right until I went over there to my home
17 country. I didn't have any accents at all.

18 Thank you for all of you to come to
19 Seattle to hear these comments. And pardon me
20 while I start my personal stopwatch and reminder
21 here.

22 I graduated from Harvard Medical School a

1 long time ago and have been a physician for more
2 than 40 years. I am now retired from active
3 practice, representing myself. And you have my
4 comments that are already submitted.

5 So now I have a perspective as a patient
6 and a physician. And as Mr. Nilsson remarked, we
7 are faced with lots of choices. I've learned as a
8 physician that everybody is unique. In my own
9 life, my own medical needs and desires change from
10 year to year, and sometimes even from minute to
11 minute. If all of a sudden I develop a pain, I've
12 got a very different outlook on things than I did
13 just the minute before, literally.

14 Now, cost-effectiveness research might be
15 of some value in studying different medical care
16 treatments, but I'm concerned that used
17 inappropriately, such as in government-controlled
18 medical systems, comparative research could also
19 result in cost containment restrictions limiting
20 optimal care and access to it, undermining doctor-
21 patient relationships, and discouraging continued
22 medical progress.

1 Government bureaucrats getting between
2 patients and their doctors is an increasing
3 problem. We've seen a lot of that already. For
4 example, Medicare, FDA. A lot of those efforts
5 have been getting in the way and not helping out.

6 One example might be efforts to reward
7 doctors for doing the right thing. A friend of
8 mine just pointed out just about 10 days ago in the
9 *Buffalo News* in New York State there was a comment
10 about a woman complaining about a hospital bill
11 charge for a pregnancy test. She was 76 years old.
12 And my suspicion is that instead of using common
13 sense, the doctor might have been trying to get a
14 good grade in a best practices scoring system based
15 on some of these quasi-governmental systems.

16 In a slightly less silly but potentially
17 more dangerous process, we're seeing battles of
18 experts on the use of Avastin, for example, an
19 anti-cancer drug that's a miracle drug for many
20 breast cancer patients or a drug that's just too
21 risky for these same patients, depending on which
22 experts are talking.

1 A similar problem -- we're seeing very
2 similar problems and have seen similar problems
3 with the FDA. That it's supposed to identify when
4 drugs are safe, and more recently when they're
5 effective. All of a sudden, one minute a drug may
6 be unsafe and ineffective and the next minute when
7 the prognostication comes down it's safe. At the
8 same time, the FDA retards use of medical drugs.
9 For example, beta blockers were in use in Europe
10 for six years before they were allowed in this
11 country. The FDA said, well this drug will save
12 10,000 American lives a year. Well, if you track
13 back over 6 years, that's 60,000 lives wasted, in
14 essence.

15 So, the effort -- any effort to try to
16 treat everybody the same way is doomed to failure.
17 And I would recommend that available resources be
18 used to promote ongoing scientific and clinical
19 research, rather than going off in whole new
20 directions once again.

21 I'd be pleased to try and answer any
22 questions you might have.

B&B REPORTERS
701 Copley Lane
Silver Spring, MD 20904
[301] 384-2005

1 CHAIRMAN WASHINGTON: No questions, but
2 thank you, Dr. Cihak.

3 MR. SMITH: That's all of the commenters
4 that we had signed up on site. We do have a number
5 of individuals who are participating via
6 teleconference. So, I wanted to take the time to
7 check with our operator, Carla, to see if anyone
8 online wants to provide comment.

9 OPERATOR: We do have several questions.
10 Your first one comes -- if you would like to ask a
11 question at this time please press star then the
12 number one on your telephone keypad. If you would
13 like to withdraw your question, press the pound
14 key.

15 We'll now pause for the Q and A roster.

16 [Pause.]

17 CHAIRMAN WASHINGTON: Okay, I think,
18 Richard, we're going to take that silence to mean
19 that no one on the teleconference has a question.

20 OPERATOR: There are no questions in
21 queue.

22 CHAIRMAN WASHINGTON: Okay. I would like

1 to provide anyone in attendance who has not signed
2 up but would be interested in an impromptu moment
3 to provide a comment to signal to Richard that you
4 would like to speak.

5 Okay. No comments regarding anything
6 you've heard this morning, no comments on the
7 guidelines?

8 UNIDENTIFIED SPEAKER: There's one.

9 [Off microphone discussion.]

10 [Laughter.]

11 CHAIRMAN WASHINGTON: Oh, that's a real
12 challenge there. He's thrown down the gauntlet
13 there.

14 DR. EVANS: Good afternoon. I'm Heather
15 Evans, I'm an Assistant Professor of surgery at the
16 University of Washington, but I am also one of the
17 K-12 comparative effectiveness research scholars,
18 one of four at UW.

19 And I just wanted to take this moment to
20 thank PCORI for doing the work that you do, and
21 providing us with hopefully a mechanism that will
22 allow us to continue the research that we're

1 learning how to do right now.

2 Thank you very much.

3 CHAIRMAN WASHINGTON: Well thank you, Dr.
4 Evans, for that comment, but also for joining us
5 today. Okay.

6 So, we have 15 minutes left in the public
7 comment period. And we have committed ourselves to
8 operating in a way that we would still leave that
9 open, which means after I recognize Allen -- unless
10 Allen, you've got a suggestion for the next 15
11 minutes.

12 DR. DOUMA: Allen Douma. Well, I just
13 wanted to make a comment to follow up your
14 suggestion that any time anyone wants to send us
15 comments, questions, concerns go to the website.

16 A little clarification on that. You go to
17 the website, which is PCORI.org. When you get
18 there, we actually say there are no current input
19 opportunities. That's not true. There's always an
20 input opportunity. And what we give there is info
21 at PCORI.org as a contact point for being on our
22 mailing list.

1 At this point I suggest -- with your
2 approval -- that info@PCORI.org -- be the contact
3 point for anything.

4 CHAIRMAN WASHINGTON: Okay. I'll ask
5 Richard to comment on that, because he knows just
6 on an operational level, or Joe, which works best?

7 MR. SMITH: That address is advertised as
8 a general contact point. So any questions,
9 comments of any nature can be sent to that address.

10 CHAIRMAN WASHINGTON: Which address?

11 MR. SMITH: Info@PCORI.org.

12 CHAIRMAN WASHINGTON: Okay.

13 MR. SMITH: And also --

14 CHAIRMAN WASHINGTON: This is a very
15 diplomatic way of saying I gave the wrong e-mail --
16 I mean, I gave the wrong contact information.
17 Okay.

18 [Laughter.]

19 MR. SMITH: And --

20 CHAIRMAN WASHINGTON: You didn't have to
21 go through all that trouble, you could just correct
22 me.

1 MR. SMITH: And on the "Provide Input"
2 page, at the bottom there's a form where you can e-
3 mail the organization directly through the website.
4 And that's automatically delivered to
5 info@PCORI.org.

6 CHAIRMAN WASHINGTON: Thank you, Allen.
7 Any other comments related to -- please. I see a
8 hand.

9 MS. BUIST: Hi, thank you. My name is
10 Diana Buist and I'm a Senior Investigator at Group
11 Health Research Institute here in Seattle. And I'm
12 delighted that you've actually come to our corner
13 of the country, the other Washington, as we like to
14 be known.

15 This week actually we're having a
16 comparative effectiveness research training program
17 at the University of Washington. And many of the
18 people are still at the University telecasting this
19 so that they can see how PCORI works, and a few of
20 us came down here.

21 But one of the things that we talked about
22 this morning that I just wanted to sort of comment

1 on that I hope is still at the forefront of your
2 mind, as you think about how you're going to be
3 making funding opportunities available to people,
4 stakeholder engagement and stakeholder-driven
5 research is historically not something that can be
6 done through traditional grant mechanisms. The
7 mechanisms are too long to review. We're unable to
8 get rapid responses to stakeholder input questions
9 that can be translated quickly.

10 And so, I just wanted to bring that back
11 to you as something that we just had a panel
12 discussion on at the University of Washington this
13 morning. That we are still looking very hard at
14 how to integrate innovative methodology so that we
15 can get rapid responses to stakeholder-guided
16 research that will fill evidence gaps. And we just
17 simply need your help in that manner, as you think
18 about how you're going to put out grant
19 opportunities, how you're going to review them, and
20 how you're going to be efficient in that process.

21 DR. SELBY: Thanks, Diana. Just take the
22 opportunity to mention again our PCORI Pilot

1 Projects, which will be appearing at the end of
2 this month, the RFP at the end of this month. So,
3 it's almost exclusively methodologically-oriented
4 research and one or two or three of the areas of
5 interest have to do with patient and stakeholder
6 engagement. So, we completely agree with your
7 point and are putting our beliefs into practice.

8 CHAIRMAN WASHINGTON: Okay. If you've
9 already had a roundtable this morning, then you're
10 prepared to not only submit us some thoughts as we
11 move ahead, but sounds like you're already prepared
12 to respond to this RFA. Well done.

13 Other comments? Okay.

14 Well, I'm looking at you, Sharon. Only
15 because I'm not sure whether we want to use the
16 next 10 minutes as sort of an open mic or we want
17 to just get started a few minutes early,
18 recognizing that if someone has another comment
19 that at least we're present.

20 I'm hearing nods for let's move on to the
21 next presentation. Is that? Unless there's
22 another suggestion.

1 Leah?

2 MS. HOLE-CURRY: We could just call at the
3 end of Sharon's presentation, leave five minutes or
4 so to call again --

5 CHAIRMAN WASHINGTON: Sounds great.

6 MS. HOLE-CURRY: -- for public comment.
7 Make sure there aren't any.

8 CHAIRMAN WASHINGTON: Okay, great idea.
9 Thank you.

10 DR. LEVINE: Great. And so, this is our
11 report of the Communications Outreach and
12 Engagement Committee. And I think one of the
13 things you'll see in each of the committee reports
14 as we go through the days is the degree to which
15 there is overlap and, hopefully, representative of
16 coordination among the different efforts. And
17 clearly, the issues of communication, outreach, and
18 engagement are on the minds of every one of the
19 major work efforts that are going on in PCORI.

20 CHAIRMAN WASHINGTON: Just remind our
21 audience both here and on the phone that we are
22 shifting into a period, as I said earlier -- the

1 earlier reports were from working groups, these ad
2 hoc groups which take on a specific topic. Now
3 we're moving into reports from standing committees
4 of the Institute.

5 Okay. And this one, Communication,
6 Outreach, and Engagement, is currently chaired by
7 Dr. Sharon Levine.

8 Thank you Sharon.

9 DR. LEVINE: Great. Thank you.

10 And just as a reminder to the Board and to
11 our guests, the members of the committee. Myself,
12 Debra Barksdale, Bob Jesse, Gray Norquist, Ellen
13 Sigal, and Harlan Weisman. And for those in the
14 room, those are our high school graduation
15 pictures.

16 [Laughter.]

17 CHAIRMAN WASHINGTON: Like Harlan.

18 DR. WEISMAN: I try harder.

19 [Laughter.]

20 DR. LEVINE: And again, since we have --
21 I'm also going to remind the group about the
22 charter. And we created these charters really as

1 we began our work. And I think we may at some
2 point want to actually think about revisiting them
3 as we get clearer and the work we're doing becomes
4 more refined.

5 But as we established it, the charter of
6 our committee was to advise and assist the Board of
7 Governors of PCORI and provide recommendations to
8 the Board regarding the Institute's communication
9 and branding work. And, the branding work, I
10 think, I hope these Power Point templates convince
11 everyone, is quite compelling.

12 Strategies to engage all stakeholders in
13 the work of PCORI. And Joe's report, I think,
14 reflects that in terms of the hiring and the future
15 staffing of the committee.

16 And methodologically sound approaches to
17 disseminating and implementing the research results
18 and ensuring their utility to patients and
19 clinicians. And we clearly wrote this before there
20 was a thought about a Dissemination Working Group
21 or exactly how -- we knew that the work of
22 dissemination was to be owned by the Board, but we

1 weren't quite sure about how that was going to be
2 deployed.

3 And so, to some extent, this reflects our
4 intention to work with the Methodology Committee,
5 which we have done. And to at least begin to lay
6 groundwork around thinking about dissemination and
7 the critical role it will play. And I'm going to
8 skip the little agenda for this report. And some
9 of this Joe covered, actually, in his report.

10 Our first real thrust into opportunities
11 for public input beside the stakeholder engagement
12 opportunities at our Board meetings and the open
13 mic or the public comment periods during the Board
14 meeting was when we put out the working definition
15 of Patient-Centered Outcomes Research. And this
16 was work of the Methodology Committee. They had a
17 sub-group that felt that it was critically
18 important to put a definition around Patient-
19 Centered Outcomes Research for a number of reasons,
20 and asked our committee to assist them in figuring
21 out how to put that work out there and get feedback
22 on it for an iterative process of refining the

1 definition.

2 And as Joe said, the open period was July
3 20th to September 2nd. While this was not
4 something that was mandated in the statute, we felt
5 that particularly now in our early stages that it
6 was critical for us to actually open up as many
7 opportunities as possible in our early work to get
8 public input. And the period of time this was open
9 was within the 45 to 60 days.

10 We have gotten over 600 responses, and all
11 the responses to the 5 questions that were sent out
12 about the definition will be posted on PCORI.org.
13 There's some technical issues that need to be
14 resolved in the next day or so. But they've been
15 organized and anonymized, if that's a word, so that
16 they can be posted in their entirety.

17 And we have issued an RFP for proposals.
18 And as Joe said, that contract has actually been
19 awarded now to analyze and summarize the input.
20 And for recommendations on methodologies, and will
21 be used to get recommendations on methodologies to
22 take this into Phase 2, which is taking the

1 definition out to patient groups. And as might
2 have been accepted for the majority of the
3 responses around the definition were from the
4 research community, from academic medical centers,
5 from physicians. And the feeling was that largely
6 because the technical nature of the questions, that
7 that was not truly in a patient-centered manner.
8 This has to be translated into something that is
9 comprehensible and meaningful to patients. And
10 that was not going to be achieved, necessarily,
11 through this survey process. And so, the second
12 phase of this work will be focus group with
13 patients.

14 And this is just a timeline for the
15 analysis and summary of input on the working
16 definition. I hope those of you in the room can
17 read the dates. This will -- the intention is this
18 will come back to the Board for acceptance of the
19 definition and consideration of the revised
20 definition after the opportunities for input at our
21 January meeting in 2012.

22 And -- oops. Lost the presentation.

1 That's not the end of the presentation.

2 UNIDENTIFIED SPEAKER: It is now.

3 [Laughter.]

4 DR. LEVINE: It is now, yes. So, I will
5 proceed without the slides.

6 CHAIRMAN WASHINGTON: Just ad lib here.

7 DR. LEVINE: Okay. So, we've had some
8 questions and I think some comments from those who
9 observe us and who have attended the meetings.
10 You're taking an awfully long time to define
11 Patient-Centered Outcomes Research. And I think
12 the Methodology Committee has felt very strongly
13 and I think the Board has supported this that this
14 definition is going to be fundamental to our
15 consideration of the kind of research that actually
16 qualifies as Patient-Centered Outcomes Research.

17 And that we have an obligation to be
18 crystal clear in what we mean, and to actually have
19 a definition that we can attach to research
20 proposals, so that the investigators understand
21 what PCORI's, what the Institute's definition and
22 the Methodology Committee's definition of Patient-

1 Centered Outcomes Research is so that there's no
2 mystery as to why some proposals are funded and
3 some are not.

4 And it was really, I think, I don't think
5 there's anyone -- perhaps we can get more efficient
6 in this process of iterative feedback, but I don't
7 think anyone felt that this was something that we
8 could do a quick and dirty piece of work on.

9 The definition will continue to be revised
10 over the next several months to ensure that it
11 emphasizes the patient-centered focus of PCORI's
12 mission is consistent with the intent of the
13 statute that established PCORI, and is broad enough
14 and clear enough to support the range of research
15 that PCORI will fund.

16 The second opportunity for public input
17 was, again, Joe mentioned this -- was the topics
18 for PCORI Pilot Projects. We did get more than 150
19 responses. I guess it was -- all right, and it
20 came back. 155 projects. And again, the period of
21 comment was August 1st to 30th.

22 The demographics of the respondents, I

1 think, given the technical nature of the Pilot
2 Projects these are really methodologic -- intended
3 to be methodologic projects. So, the fact that
4 there isn't a large representation or a majority
5 representation of patients -- I think it was 17.45
6 percent of the 150 responses. I'm sure that rounds
7 up to a whole person. In response to the working
8 group's -- sorry, in response to the questions
9 around the Pilot Projects, is really reflective of
10 the nature of the first Pilot Projects. And
11 clearly if we're doing our work well, will not be
12 typical of the demographics of subsequent public
13 input processes.

14 Okay. We've -- to date PCORI has issued
15 four requests for proposals, including the working
16 definition of Patient-Centered Outcomes Research.
17 Three that have come from the Methodology Committee
18 and Joe mentioned these. The review and synthesis
19 of evidence for eliciting the patient's perspective
20 in Patient-Centered Outcomes Research, which is a
21 literature review. Expert stakeholder interviews
22 to identify evidence for eliciting the patient's

1 perspective in Patient-Centered Outcomes Research,
2 again, an interview process. And then, methods for
3 setting priorities in research, which are intended
4 to be white papers. And I know the Methodology
5 Committee will include more details about this in
6 their report.

7 For the question of so how have we
8 distributed information about this, for each of
9 these RFPs, PCORI performed outreach to our e-mail
10 list of subscribers, which is more than 620 at the
11 current time, supplemental lists of clinical and
12 translational research centers, academic research
13 institutions, and provider and advocacy
14 organizations.

15 And I would say that for each of these
16 RFPs, the Board and Methodology Committee members
17 have then forwarded them on also to their own
18 networks and their institutions and those whom they
19 know are -- might be interested in this or suspect.

20 And I do want to reinforce because we get
21 questions about this all the time. Because we are
22 not part of government and are an independent non-

1 profit non-governmental organization, we cannot
2 advertise these funding opportunities in the
3 Federal Register. So we get questions all the time
4 about, well, that's where I go for information.
5 Why isn't it there? And we've gotten counsel that
6 we cannot take advantage of that.

7 And I hope some of you have had a chance
8 to look at the PCORI website. It was up and active
9 last week. And it looks better, it's more user
10 friendly, hopefully. It includes visual changes
11 based on the logo and color palette that we
12 approved at the July Board meeting. It will
13 support the expansion of PCORI content and
14 opportunity for interactions as the work
15 progresses.

16 There is an easier mechanism now for
17 joining the PCORI mailing list and providing input
18 that Richard referenced and the Executive
19 Director's Corner, I think, currently has the
20 first, from the Executive Director's report, that's
21 now up on the website. It wasn't when we got the
22 e-mail last week about it, but it's currently now

1 on the website. So, anybody who is linked to the
2 web right now can look it up and hear what Joe has
3 to say.

4 And the Pilot Project funding, again, the
5 announcement will be on PCORI.org on September
6 28th. And the period -- it will be open from
7 September 28th to November 1st. Again, we'll go
8 through the direct e-mail to stakeholders,
9 potential applicants. There will be proactive
10 media relations, which is essentially issuing a
11 press release -- for us is essentially issuing a
12 press release and making contact with media that
13 have covered us in any way, shape, or form asking
14 if they're interested in promoting this, Board and
15 Methodology Committee members and other grassroots
16 efforts.

17 And we have a number of -- a large number,
18 actually, of presentations, Speaker's Bureau
19 presentations, scheduled between now and November
20 1st. And the content around the announcements will
21 be integrated into all of those Speaker's Bureau
22 presentations. And there will be a Q and A

B&B REPORTERS
701 Copley Lane
Silver Spring, MD 20904
[301] 384-2005

1 teleconference for applicants. But that goes
2 beyond the -- getting the word out.

3 And I'm just going to go to Speaker's
4 Bureau just so folks can see, I don't know if you
5 can read that. It's kind of small. But we have I
6 think eight or nine upcoming opportunities where
7 Joe or Board members will be speaking at large
8 industry events representing patient meetings,
9 consumer meetings, as well as professional
10 meetings. And the content about the announcement
11 will be promulgated at that point, in those
12 presentations. So it's really an opportunity to
13 get the word out to those who might -- who might
14 actually consider applying for one of the Pilot
15 Projects.

16 One of the things that, and this, again,
17 is just kind of a summary and a bit of a look
18 forward. We've made a commitment that we will
19 engage -- we will make a concerted effort to engage
20 with stakeholders around Board meetings. And what
21 we've tried -- what we've done since our first two
22 meetings where we had general stakeholder forums is

1 tried to tailor the approach either to the unique
2 nature of the environment in which we're in, or
3 trying to bring in different groups and different
4 experiences brining in different groups of
5 stakeholders in each venue. These are
6 opportunities. We have a large group of Board
7 members, and the opportunity to use the time we
8 have to hear different stories and hear different
9 perspectives about our work.

10 In March and May, in St. Louis and New
11 York we had general -- invited people to come, had
12 a series of questions, and got fairly general
13 feedback. In July, we left our meeting venue and
14 went out into the community, if you will. We had
15 two small group meetings with patients and
16 caregivers, and eight small group meetings which
17 convened 43 different stakeholder organizations to
18 provide input and feedback to PCORI. We were in
19 Washington. Many of the organizations that many of
20 you represent have offices in Washington. And we
21 felt we really wanted to honor the location and to
22 try and concentrate as much as we could the

1 opportunity for input.

2 I'll speak about tonight -- our
3 Stakeholder Engagement Forum tonight. And in
4 November when the Board is going to New Orleans,
5 Gray Norquist has taken the lead on identifying
6 clinical sites where the Board -- where groups of
7 Board members will go out to two different clinical
8 sites in the community and folks can ask Gray what
9 the details are, where we stand on that. Again, to
10 get a bit of a different perspective on what the
11 issues are and how the work that PCORI does might
12 actually potentially help those different community
13 members.

14 And this evening, and again, thanks to
15 Leah for organizing this, we have invited groups
16 from the Pacific Northwest to make brief
17 presentations to the Board about their work or
18 their perspective and how it can inform PCORI's
19 work. And we have three very different groups
20 coming. Native American and Alaska Native
21 healthcare folks, complimentary and alternative
22 medicine researchers and providers, and Seattle is

1 home to a large organized provider community and to
2 several large, robust research enterprises that
3 have a long and storied history with comparative
4 effectiveness research. And we will hear from them
5 this evening. Everyone here is welcome to join us
6 from 7:00 to 9:00.

7 And the final, this is my final slide.
8 Again, as Joe mentioned, we have posted and they're
9 currently posted on the website, position
10 descriptions for three roles that we are
11 recruiting. These are senior-level roles, director
12 roles, that are essentially external --
13 collectively will represent an external engagement
14 SWAT team. A team of experts who will share the
15 work of communicating with the communities with
16 which we -- who have an interest in our work and
17 with whom we desperately want to interact with;
18 Director of Communications, a Director of Patient
19 Engagement, and a Director of Stakeholder
20 Engagement. And the term really represents the
21 provider community; physicians, nurses, industry,
22 policymakers and they will work together to ensure

1 seamless and hopefully very effective mechanisms of
2 being sure that we're hearing what we need to hear
3 and getting the input we need.

4 And they, together with Joe, will develop
5 and implement and bring to the Board a strategic
6 communication plan.

7 And I think that's it. I'm happy to
8 answer any questions.

9 CHAIRMAN WASHINGTON: Thanks, Sharon.
10 Both for your work and for that summary of all the
11 activities underway.

12 Opening it up for questions, comment.
13 First we have Harlan W. and then Debra.

14 DR. WEISMAN: Sharon, first of all, thanks
15 for beautifully summarizing the work of that
16 committee.

17 You mentioned -- and I'm really glad that
18 you did, that there's been buzz, I guess, about why
19 are we taking so long with the definition of what
20 PCOR is and you explained its importance.

21 The one thing I wanted to supplement to
22 what you said, is that while we are getting that

1 input, it's not really holding us up. In that, you
2 know, we did adopt it as a working definition that
3 we would refine through the processes you said.
4 But the work has gone on and I don't think anything
5 is being held up, as you indicated, with all the
6 RFPs that are going out already.

7 CHAIRMAN WASHINGTON: Good point.

8 Other comments? Debra, please.

9 DR. BARKSDALE: Mine is easy. It's a
10 technology issue.

11 PCORI owns the domain names of .net and
12 .com, and they both have the old website. So I
13 just wanted to make sure that you knew that.

14 DR. LEVINE: Oh, thank you.

15 CHAIRMAN WASHINGTON: Okay, Gray?

16 DR. NORQUIST: So, one of the other things
17 that I often talk about is my concern about
18 reaching the populations who are marginalized and
19 underrepresented and I think we have some way to go
20 on that. And we are, I think, really trying our
21 best to do that.

22 One of the ways in which we can do that is

1 partner with others, which Sharon and I have talked
2 about. And when I -- Sherine and I were at the IOM
3 collaborative meeting that was mentioned up there
4 in July, and met, there was also a discussion about
5 health disparities. And I think we have an
6 opportunity to partner with HHS, particularly the
7 Office of Minority Health and I've talked to Dr.
8 Rashid there. And so, I think there's a
9 collaborative effort we can do with other partners
10 like that, because we don't have all the funds.
11 We're not the only ones that are thinking about
12 this. But I think there are other opportunities we
13 have outside of our standard partners of AHRQ and
14 NIH that we could also take advantage of.

15 And I'm just saying this publicly because
16 I'd like for others who are out there who have
17 ideas, you know, about what we could do to reach
18 some of these populations -- could be very helpful.

19 So, part of the plan in New Orleans is to
20 go to the community, because often we've asked the
21 community to come to us. And I think we have to
22 take advantage of our being there but go out to the

1 communities also.

2 CHAIRMAN WASHINGTON: Thank you. Well,
3 Sharon, as you mentioned in your introductory
4 comments there is considerable overlap in what's
5 going on in the COE with activities in the working
6 groups as well as with the methodology. And we all
7 see that as a good thing. And so, that's one of
8 the reasons why I think there's so few comments or
9 suggestions at this point.

10 Which means that through an iterative
11 process, we have clarity and we're in agreement
12 about what we need to do next. So, thank you.

13 I have Harlan K?

14 DR. KRUMHOLZ: I just want to make one
15 other point. I mean, I think it's extraordinary
16 the investment that's been made and the speed with
17 which it's been done, because this is one of the
18 more difficult and challenging areas for us.

19 One of the issues that's going to be very
20 important for us is how to manage expectations.
21 Because as we invite the world into our process and
22 try to make sure that we bring in the input, one we

1 have to make sure we're getting people whose voice
2 is normally not heard, and then we have to figure
3 out how we're going to respond, how do we make
4 people feel that it wasn't a futile effort just to
5 throw the comments forward. But that there was
6 some meaning that was attached to, and then some
7 action that was taken. Not necessarily as a result
8 of each individual one, but that we have ways of
9 incorporating it, sincerely and genuinely,
10 authentically incorporating what we're hearing.

11 And I think the work that we're doing with
12 the comments, and the groups should know that in
13 hiring someone to help us bring the themes out of
14 all these comments, I thought that was a tremendous
15 -- before, because one thing for us just to flip
16 through comments that are given to us, but to adopt
17 a methodology to try to -- using qualitative
18 research methods to try to bring out the themes, as
19 well as, some of the specifics and identify some of
20 those key things, I think, is again a very advanced
21 way of thinking about how can we make everyone's
22 comments meaningful as opposed to just going

1 through the motions of trying to get people to
2 bring this in. But then people are wondering, well
3 what's going to happen to it? Does this really
4 matter?

5 And if we can make this tangible to
6 people, I think that it will help us in the long
7 run.

8 DR. LEVINE: And I should have mentioned
9 that in addition to just posting the comments and
10 scrubbing them and then posting them, there will be
11 an executive summary and analysis that's posted on
12 the website which will reflect how the -- which
13 changes in the definition resulted from the public
14 input process. So that's clearly the intention.

15 DR. WEISMAN: We actually started there
16 and said, well because people might not recognize
17 their own comments in whatever we summarized, we
18 thought it was also if we could de-identify the
19 comments to put everything on there. So it's fully
20 transparent. People can see all the comments,
21 their own as well as our summarization and how we
22 synthesize the information.

1 DR. LEVINE: And we will be much clearer
2 upfront in future public input processes about
3 posting comments and making comments that are sent
4 in available on the website. We had some concerns
5 this time because we just quite honestly didn't do
6 it. So that's why we took great pains to ensure
7 that we weren't violating anyone's confidentiality.

8 DR. KRUMHOLZ: And the truth is, it could
9 be a great source of information for people who
10 want to do research to look at the kind of
11 comments. And for us to be able to index and tag
12 some of this so that somebody wants to go online, I
13 mean, if we really get people knowing and be
14 confident that the information they give us is
15 going to be used and available and beyond us, it
16 may encourage people, and I think Gray's point is
17 so important. That we have to find ways to get to
18 populations that haven't normally been able to have
19 a voice.

20 But then, if I'm interested in doing
21 research, I might wonder what are people saying?
22 You know, and if I can -- if it's indexed and

1 tagged, I can go in there and say, well what are
2 people saying about X? And I'm going to get some
3 authentic information that I actually might even
4 incorporate into my grant applications as some
5 preliminary study data about where the need is.
6 And I don't mean just to PCORI, but I mean
7 anywhere, because it's helping me say there is a
8 need out there. It's being expressed and this is
9 how, you know, I can use some of that information.

10 So for us, I think creating this as a
11 resource if we can really get, you know, 20,000
12 people to make comments -- and we'd be able to
13 build the capacity where we can organize that, post
14 it, use it, search it, it becomes in its own right
15 away that we give voice to people who ordinarily
16 don't have a way to speak to researchers. Don't
17 have a way to bring forth those priorities.

18 The more that we can bring the voice to
19 people who are the farthest from having a voice
20 right now, the more successful we're going to be.
21 And I think that could -- I could envision a system
22 that we do where it's a dividend. Because we're

1 doing it to help us with our work, but it might
2 help a lot of other people with their work also.

3 DR. WEISMAN: You know, just to clarify --
4 I mean, not clarify but to expand on what's being
5 done. The group that will be doing this for us
6 will do exactly what you said. They're going to
7 database it and then they're going to search and
8 they're going to use algorithms to create the
9 synthesis. Just as you said.

10 What you're going on to say is, can we
11 make that available? And I don't know. That's
12 something we should certainly examine.

13 DR. KRUMHOLZ: And if they use standard --
14 I mean, there are ways to do that. And if you had
15 an organization with some money, they might be able
16 to invest in something like that.

17 CHAIRMAN WASHINGTON: Okay. Allen,
18 please.

19 DR. DOUMA: I want to take us back just a
20 few minutes ago and just reaffirm the whole issue
21 we need to change the demand curve. And I left out
22 when I made that comment about the demand curve.

1 Because people who aren't patients actually make
2 the vast majority of healthcare decisions on an
3 ongoing basis, and we need to be able to reach
4 them.

5 And one of the things that's really
6 critical, which Joe has already put in the job
7 description for our new Director of Communications
8 is creating a communication strategy. And I'm
9 presuming hopefully that's a full-blown strategy
10 which has goals, objectives, metrics, timelines.

11 But particularly, I hope that we have core
12 to that communications strategy is the strategy
13 with regard to how to change behavior and create
14 demand. And then we can meet the passion that is
15 in a lot of people on this table.

16 CHAIRMAN WASHINGTON: Excellent point. At
17 this point I'm going to re-open -- Sharon, to you
18 and all the members of your committee. I'm going
19 to just re-open the floor for any comments from the
20 public participants who are here today.

21 Okay. While we're waiting, what I'm going
22 to propose is that we will take, oh, somewhere

1 between -- looks like it's about 17 minutes then
2 we'd start at 3:20. Does that sound right to you?

3 UNIDENTIFIED SPEAKER: Sure.

4 CHAIRMAN WASHINGTON: So, I'm just going
5 to ask one more time. No public comments. Then,
6 we are going to take a break and reconvene promptly
7 at 3:20 to hear report from the Methodology
8 Committee. Thank you.

9 [Recess.]

10 DR. GABRIEL: [Webcast resumes in mid-
11 sentence.] Thank you very much, Gene. And thank
12 you in particular for making room for our whole
13 team up here. Our presentation today is really
14 going to be a team effort.

15 I'll start out with just a few
16 introductory remarks and then we'll have each of
17 our work group leaders that are seated right next
18 to me here will go forward with an overview and
19 update of their work group. And we're really
20 looking very much for input and hoping to generate
21 some discussion at the Board regarding our plans
22 and our next steps. And then, Sharon-Lise and I

1 will close up at the end.

2 So, I saw my slides three times this
3 afternoon already, but there they are.

4 [Laughter.]

5 DR. GABRIEL: Pardon me?

6 [Off microphone discussion.]

7 DR. GABRIEL: Okay. So as I said, I'm
8 just going to make some brief introductory remarks
9 to remind you of our charge. Obviously, making
10 recommendations regarding methods for Patient-
11 Centered Outcomes Research, establishing priorities
12 to address research -- to address gaps in research
13 methods and their application, and we talked a
14 little bit about the Pilot Grants Program and what
15 grants programs might follow. And we hope that
16 there's some funding -- Methodological Grants
17 Programs that follow in the future to fill some of
18 the gaps that we are -- that we will identify
19 through our Methodology Report. And also, to
20 provide guidance about the appropriate use of
21 methods for Patient-Centered Outcomes Research.

22 Just a reminder to the Board regarding how

1 we're structured. We have three work groups and a
2 Report Assimilation Group. The Patient-
3 Centeredness Work Group, chaired by Dr. Ethan
4 Basch, to my right here, whose goal is to develop
5 methods to incorporate the patient perspective into
6 all phases of Patient-Centered Outcomes Research.
7 And soon as I'm finished with my introductory
8 remarks, Ethan will take over and talk about their
9 work group's activities.

10 The Research Prioritization Work Group
11 chaired by Dr. David Meltzer, to his right. The
12 goal of which is to inform prioritization of new
13 research studies. And then, the Research Methods
14 Group, chaired by Steve Goodman, to the right of
15 Joe over there, developing methods to use data
16 design and statistical analyses for the conduct of
17 Patient-Centered Outcomes Research.

18 The Report Assimilation Group, which will
19 follow, Mark Helfand chairs that group. And after
20 the brief presentations of the first three, Mark
21 has some comments that he will share with us
22 regarding the assimilation task of that group. And

1 as you recall, that group's task is to really -- in
2 real time, bring together the work of each of the
3 other three groups and begin forming the
4 Methodology Report as we're moving forward.

5 So this is a very busy slide, and I don't
6 mean for you to look at it in detail, but it's our
7 activity timeline. And you can see the kind of
8 vertical blue things are work that we've already
9 completed or at least is well underway. Of course,
10 our charter, our work plan. We've hired interim
11 researchers, two of whom are with us today, Howard
12 and Crystal. So, thank you for being here. And
13 we've begun the work of the PCOR definition, along
14 with Sharon Levine and Joe and the staff.

15 There are solicitations and literature
16 reviews and white papers being commissioned by the
17 various work groups, and you'll hear more about
18 that. But each of those activities has a timeline
19 and a task list associated with it. There are some
20 workshops, as you see there, that are being planned
21 by each of the work groups. And you can see their
22 final due dates all coming together to create a

1 final report in May 2012 as dictated by the
2 statute.

3 So, and these are just some discussion
4 points that will come out in each of the groups.
5 But really, things for the Board to kind of begin
6 to think about because these are the issues that we
7 really need your input on and we need your
8 guidance.

9 And so, with respect to the first one.
10 The importance of methods that will be generated by
11 the patient-centered work groups for incorporating
12 with the patient engagement activities of the Board
13 and we had that discussion last night and a little
14 bit today. And that's top of mind for us, is if we
15 could have more discussion, more input from the
16 Board as to how best bring those two activities
17 together.

18 Likewise, the methods generated by the
19 research prioritization work group vis-à-vis the
20 prioritization framework set by the board. How do
21 those two things best fit in and how can we be as
22 complimentary as we can to one another's

1 activities?

2 You'll hear from Steve about the
3 generation of tools and standards for the Methods
4 Report and understanding that this is a long
5 process. The statute specifies that there's a
6 report due in May but there's an expectation that
7 this is a living, growing activity that will be
8 updated and improved with new research on an annual
9 basis. And so we'll talk a bit more about that.

10 We're extremely grateful for those of you
11 who participated in the two Board-Methodology
12 Committee calls led by Mark Helfand and the
13 Assimilation Group. And your input and your ideas
14 really did change our direction in many spots
15 already along the way. And we hope that you agree
16 with us that that's the first step, not a final
17 step. And we'd like your thoughts on how best to
18 continue that interaction and how best we can
19 continue to receive input regarding the --
20 especially regarding the Methods Report, but any of
21 our activities going forward.

22 So these are things just to kind of keep

1 in mind. They will come up again as high points of
2 the discussion. And I think we have a very small
3 number of slides, and hopefully that will stimulate
4 discussion.

5 So, I will pass this to Ethan who will
6 take us through the Patient-Centeredness Work Group
7 activities for starters.

8 DR. BASCH: Great, thanks so much,
9 Sherine. Hi, I'm Ethan Basch from the Methodology
10 Committee. I chair the Patient-Centeredness Work
11 Group and will be presenting our really very
12 collaborative work of the other members of this
13 group, including Mary Tinnetti, Naomi Aronson,
14 Brian Mittman, and then our representative from the
15 Report Assimilation Group, David Flum. And we've
16 actually had broad input from the Methodology
17 Committee for the work that I'll be talking about.

18 Just to give the Board a sense of what the
19 scope of the Patient-Centeredness Work Group is.
20 We have the charge to identify methodological
21 standards for incorporating the patient perspective
22 into various aspects of PCOR. And we've divided

1 this into three key areas. The first is the
2 development and prioritization of research
3 questions. So that's not prioritization of
4 research topics, it's really the more granular
5 questions once a topic has already been
6 established. So, we're not involved in identifying
7 or prioritizing broad research topics. It's more
8 once those topics are identified and we start to
9 think about research, what are the research
10 questions of interest that are patient-centered?

11 The second, is to bring the patient voice
12 into the design of specific study components? Most
13 notably the selection of interventions, the
14 selection of comparators, and outcomes, and this
15 includes, of course, patient-reported outcomes,
16 although we acknowledge that patient-reported
17 outcomes are not the only patient-centered outcomes
18 that are used in clinical research.

19 And the third area is within the process
20 of clinical decision-making and then, care
21 delivery. And it was suggested to me that in order
22 to, you know, help everyone to get their arms

1 around this, maybe to give a specific example
2 operationally of how we think about this and
3 contextualize it.

4 So, I'm an oncologist. And an important
5 area in oncology is the control of nausea and
6 vomiting around cancer treatments. And a number of
7 clinical practice guidelines have been produced and
8 disseminated within oncology to guide decision-
9 makers around these therapies.

10 And these guidelines for the most part are
11 based upon systematic reviews of existing
12 literature. And when looking in a little bit of
13 detail at the literature, it becomes clear that
14 most of the endpoints that are used are vomiting,
15 not nausea. Nausea is rarely included. And in
16 addition, the measures that have been used in these
17 studies were not developed with patient input. And
18 there was really little or no qualitative research
19 in patients who experience, right? Nausea or
20 vomiting, in order to decide how to measure, what
21 to measure, what score changes are clinically
22 meaningful, and so on. Yet there is a fairly

1 robust body of existing literature around the
2 control of emesis during cancer treatment.

3 And so, when we think about this in terms
4 of this continuum, what we're really talking about
5 is from start to finish when developing research
6 questions and developing studies and then
7 ultimately analyzing and disseminating those
8 results, how do we assure that the patient
9 perspective is integrated into every aspect of
10 these processes from a methodological standpoint?
11 And so, that's what we're engaged in.

12 So, to give you an update on the
13 activities of our work group. Two RFPs, which
14 Sharon alluded to earlier, were released and are
15 out. We've received LOIs for these, and I'll show
16 you our timeline in a moment for expecting the
17 responses.

18 Theses two RFPs are complementary to each
19 other. The first regards the review and synthesis
20 of evidence for eliciting the patient perspective
21 in PCOR. And the second is the conduct of expert
22 stakeholder interviews to identify evidence for

1 eliciting the patient perspective in PCOR. And the
2 basic idea of these RFPs is for us to have a sense
3 of the landscape of what practical methods have
4 been used in order to engage patients and their
5 surrogates in the selection of research questions
6 and in the design of clinical research.

7 And I should note that we particularly
8 highlight methods for reaching difficult to reach
9 patient populations, and also stress that we're
10 interested in looking at the landscape not just in
11 healthcare but beyond healthcare. We're very
12 interested in what other industries have used in
13 order to engage patients, consumers, other
14 stakeholders, which are complementary to these
15 activities.

16 This is our timeline. So, the proposals
17 for the RFPs are due on October 6th. We have a
18 very quick turnaround. We'll be selecting the
19 vendor on October 13th. So we only have about a
20 week to turn this around.

21 This reflects the very tight timeline that
22 the Methodology Committee has in general for

1 preparing our Methodology Report in May. So we
2 have a compressed timeline but we feel a realistic
3 one for achieving our goals. And the final report
4 by the vendor who is selected will be due on March
5 1st.

6 There are several other activities that
7 we're talking about. The possibility of an open
8 RFI to elicit broad perspectives on these issues.
9 We are discussing a workshop for presentations and
10 discussion to help consolidate our thinking in
11 these areas. And finally, we, of course, will be
12 developing the relevant sections around patient-
13 centeredness for the Methodology Report.

14 We had one question for the Board. This
15 was touched on last night to some extent, and has
16 been alluded to today. Which is, how does the work
17 of this work group complement ongoing or planned
18 activities of the Board? Or I guess actually of
19 Joe's staff. And how can we effectively
20 collaborate as we formulate these methods?

21 DR. GABRIEL: So, if it's all right -- is
22 it all right, Dr. Washington, if we pause after

1 each of the work group presentations for questions
2 or discussion?

3 CHAIRMAN WASHINGTON: Absolutely. You're
4 in charge.

5 DR. GABRIEL: I'm in charge? Okay.

6 CHAIRMAN WASHINGTON: I'm going to ask you
7 to direct any questions or comments.

8 DR. GABRIEL: Okay, questions.

9 CHAIRMAN WASHINGTON: Be careful what you
10 wish for.

11 DR. GABRIEL: I didn't wish for this, just
12 to be clear.

13 [Laughter.]

14 VICE CHAIRMAN LIPSTEIN: But Ethan, I
15 would, I mean, I think there's obvious
16 complementary work going on, because if we think
17 about what Sharon just presented and in the
18 upcoming reports about whether we're thinking about
19 figuring out how to involve patients and
20 stakeholders in a variety of either setting
21 National Priorities, developing research questions,
22 the Research Agenda -- the learnings of these two

1 particular RFPs, RFAs, whatever we call them -- I
2 think will be germane to almost every aspect of
3 what we do.

4 So, I think the overlap is very on-target.

5 DR. DOUMA: Allen Douma.

6 DR. GABRIEL: Allen then Sharon.

7 DR. DOUMA: Okay. I apologize if you said
8 it and I missed it. With regard to the timeline of
9 the patient-centered RFPs, where are they now and
10 when will they be something that we would be able
11 to take a look at? And, et cetera, et cetera.

12 DR. BASCH: Yeah, absolutely. So the RFPs
13 were issued, the solicitations went out and our
14 deadline for receiving Letters of Intent has
15 passed, we've received our Letters of Intent.

16 For those who choose to put in an
17 application, those are due on October 6th and we'll
18 be making the award on October 13th. And then,
19 we'll have ongoing dialogue with the awardees,
20 obviously, with the final reports being due on
21 March 1st.

22 So, I would anticipate that the Board

1 would have access to the reports immediately in
2 March of 2012.

3 DR. GABRIEL: Sharon and then Christine.

4 DR. LEVINE: Sort of an invitation,
5 Sherine, to you and Ethan -- I'm sorry?

6 UNIDENTIFIED SPEAKER: Speak into the mic.

7 DR. LEVINE: Okay. An invitation to think
8 about if there is a point in time where it would be
9 useful to ask one of the Board members to join your
10 work group for the purpose of coordination,
11 integration, communication if you've -- if there's
12 a point at which you think that perspective would
13 be helpful, I'm sure you'll get volunteers.

14 DR. BASCH: Absolutely. We actually
15 talked about that in our closed session this
16 morning. We would really welcome that. So maybe
17 we could talk about that. Thank you. Go ahead.

18 DR. GABRIEL: So, how about right now in
19 terms of including it.

20 So, really -- I mean, we did talk about it
21 this morning. And if there -- we would love to
22 invite Board members who might be interested if

1 it's all right with the chairman to just send us an
2 e-mail and we'll sort that out.

3 CHAIRMAN WASHINGTON: Sure, I think we
4 need to do [off microphone].

5 Gene Washington. But I would just say, we
6 need to be more proactive and organized. So, Joe
7 and I will follow up after the meeting to identify
8 Board members' interest, because it may not be just
9 this one working group.

10 DR. GABRIEL: I hope it's all of them, in
11 fact.

12 CHAIRMAN WASHINGTON: Okay. Great
13 suggestion.

14 DR. GABRIEL: Gail Hunt, I think Gail was
15 next, then Christine, then Gray.

16 DR. HUNT: Yeah.

17 CHAIRMAN WASHINGTON: Sorry, Gail.

18 DR. HUNT: Gail Hunt -- that's all right,
19 I'll just stand up.

20 I'm really interested in the timeline that
21 you were talking about February getting your final
22 reports in. Maybe earlier we could have an

1 opportunity as the Board to take a look at some of
2 the -- what's coming out of it. But I'm thinking
3 of it tying in with the RFA that we are going to be
4 -- PFA, that we are going to be getting out where
5 they're going to have to -- at the end of September
6 and then they have to have their Letters of Intent
7 in and then they have to actually have the
8 proposals in.

9 And if there's some way we're going to be
10 expecting that the people who are going to be
11 preparing those proposals will in some way be
12 thinking ahead about the issues of engaging
13 patients in the outcomes of the PFAs, even though
14 it's, you know, it's like a year out or maybe in
15 some cases two. But it would be great if there
16 would be some way they would have the access to
17 some of that information. Not in preparing their
18 proposals, but early on, so that when they're
19 thinking about how they want to be doing
20 dissemination they can be taking advantage of what
21 you guys have gotten back from your projects.

22 DR. GABRIEL: Christine?

1 DR. GOERTZ: Yes, thank you. I see a real
2 advantage for us to coordinate closely as we put
3 the Pilot Project PFA on the street. And in
4 learning lessons from you, because you're having
5 some experiences with peer review and some other
6 aspects just a little bit before us. We may be
7 able to incorporate some of those lessons that you
8 are going to learn through your review process and
9 just your grant receipt process. I think that
10 would be really helpful.

11 And also, I think we should find a way to
12 keep your RFPs posted or available so that
13 potential grantees for the Pilot Projects will know
14 what kinds of work we've already solicited so we
15 don't have people that are trying to do duplicate
16 work that whatever they might propose would be
17 complementary rather than duplicative as we're
18 moving forward.

19 DR. GABRIEL: Excuse me. I know the Board
20 knows this, but just for those of you who are here.
21 These of course are grants -- contracts versus
22 grants. So, these solicitations are very specific

1 in terms of what we want back. And the kind of
2 information and the content we want back is
3 specifically the content that will help us create
4 our Methodology Report.

5 So unlike the grants, which are of course
6 much more open-ended, there's just a difference.
7 Really more for those in the public, than the
8 Board, because the Board knows this, but I
9 completely take your point that they need to be
10 complementary and they should leverage one another.

11 Joe?

12 Oh, I think -- yeah.

13 DR. SELBY: Joe Selby. This actually
14 builds on Christine's comment. And I'm thinking
15 specifically of the ways that we make the review of
16 the Pilot Project applications, make it
17 distinctively PCORI.

18 And one of the ways is by having an
19 additional criterion -- review criterion that's
20 called patient engagement. A second way that's
21 linked to that is by making a presentation to study
22 sections before they start on their work that

1 conveys PCORI's intentions, what we're looking for.
2 And I'm thinking that there, the work you've
3 commissioned might be some of the richest and most
4 thorough information that we could provide to a
5 study section before they start on exactly what we
6 mean by patient engagement and what is known about
7 the methods.

8 DR. GABRIEL: Gray?

9 DR. NORQUIST: Yeah, so I think what
10 you're -- Gray Norquist. We really do need the
11 interface. And I don't know who's going to
12 volunteer, but definitely this -- our committee
13 should be very strongly working with them because
14 we would like to see, actually, the responses that
15 you get, proposals, because we were thinking of
16 doing a landscape, ourself. And we said, wait a
17 minute. Let's stop and see what these are going to
18 do.

19 But I think because it's a contract we
20 have the opportunity to work with the vendor during
21 the whole process, which is a little different than
22 the grants. So, I think we should build in

1 something where we're actively working with them as
2 they go, because that could inform us whether we
3 need to go with something a little bit different
4 but could help you.

5 So, I don't know who you're going to
6 assign or what, but I think we need to have more
7 than maybe one or something. But maybe we need to
8 have at least one of you -- well, we do have Brian
9 on our committee. But I'm thinking about this
10 particular Methodology sub-committee. We need some
11 interface with our committee for a while. Right,
12 Sharon?

13 UNIDENTIFIED SPEAKER: [Off microphone.]

14 DR. NORQUIST: Yeah. Well, I'm talking
15 about our committee on engagement. But also,
16 you're talking about the Dissemination Work Group
17 now?

18 UNIDENTIFIED SPEAKER: [Off microphone.]

19 DR. NORQUIST: Oh, that's right. You're
20 right, I'm sorry. But so, we need -- you're right,
21 I'm getting them confused. But you're right, yes.

22 DR. GABRIEL: Okay. Any other questions,

1 comments? Debra and Leah.

2 DR. BARKSDALE: I just had a more general
3 observation in the terminology that we've been
4 using is not a reflection on this work group. The
5 Board has been doing this too.

6 RFAs, PFAs, RFIs, RFPs.

7 UNIDENTIFIED SPEAKER: [Off microphone.]

8 DR. BARKSDALE: Yes, yes. And since we
9 are appealing to a broader stakeholder audience and
10 not just academicians, we need to be very mindful
11 of that.

12 MS. HOLE-CURRY: Leah Hole-Curry, Board of
13 Governors.

14 I think, I guess, I would frame the
15 question a little bit differently for each of the
16 work groups. What you started with, Sherine, the
17 Methodology Committee in addition to many other
18 support roles that I hope you can play with PCORI
19 has a very targeted statutory responsibility. And
20 I know that you all feel that impending deadline.

21 So, I guess my question -- I mean, maybe
22 would be two-fold about how does the Board support

1 your activity? And also, maybe what the touch
2 points are.

3 But yes, there's a lot of overlap with our
4 general work streams and what we're trying to
5 accomplish on the Board. And ultimately, that we
6 have everything coming together to make PCORI
7 products overall fit. But you guys have a very
8 specific job and you did a very nice outline at the
9 beginning of how to get there. So I would just --
10 I would tweak the participation, at least for the
11 first report, in terms of how can the Board be
12 informed, help each other with communication flow.
13 But it's really to ensure that your report gets
14 completed and that we think the right things are
15 being addressed in the report, rather than just
16 kind of overlapping topics.

17 So, I just think that we need to be
18 careful about how we phrase the question in terms
19 of the interaction at this point to make sure that
20 that report stays paramount and that these
21 activities are feeding the report and we're asking
22 the Board the right questions about, you know,

1 information to the report. Just to help us keep
2 focused on that initially.

3 DR. GABRIEL: Right. And that's exactly
4 where we are. And I think the suggestion of having
5 Board members actually participate with the work
6 groups, each of whom has, you know, one or two or
7 three, maybe, chapters of the report is going to
8 really help us get there in a much more specific
9 way.

10 Rick?

11 DR. KUNTZ: First of all, I think this is
12 great work and I just wanted to make one comment
13 about potential ways that we can collaborate in the
14 design for study part.

15 It's interesting how you're going to look
16 at the methodology to potentially incorporate
17 patient perspective. And you talk about the
18 selection interventions, the comparators, the
19 outcomes specifically. And I'm trying to envision
20 as we put together our Research Agenda, will we be
21 putting guardrails and boundaries on the types of
22 solicitations we get from investigators by making

1 them fit into a methodology or design or would it
2 be something you would add after they get the
3 solicitation.

4 DR. BASCH: It's a great question, and
5 thanks very much for that. And I think that Steve
6 will probably touch on this as well.

7 We see the products of this work group
8 fitting in perfectly to the Translation Table,
9 which in turn is intended to be used as a guide for
10 selecting designs of research to answer particular
11 questions.

12 And so, this is seen as a filter or a
13 lens. And Mark will touch upon this in his
14 presentation, for a way that we think about how
15 PCOR is designed or envisioned.

16 So I wouldn't maybe go so far as to say
17 it's an expectation that research should be carried
18 out in this way, but this is really putting out
19 there that when one is conducting PCOR that these
20 are approaches that are reasonable in order to
21 assure that we are truly being patient-centered.
22 Right? So it's not a stand-alone project.

1 DR. NORMAND: And I'm just -- Sharon-Lise
2 Normand, Methodology Committee. I would just add
3 to that. And I think it's aligned with Dr. Selby's
4 suggestion when these are being reviewed -- when
5 the new -- I don't want to use an acronym now, but
6 the Program PCORI Funding Announcement comes out
7 and there are applications that are submitted.
8 Again, I think part of the review process should
9 take the points that the Methodology Committee is
10 making in terms of, is this a patient-centered
11 outcome? Have the investigators thought about --
12 how did they design their comparators? How did
13 they design their treatments? How did they design
14 their outcomes?

15 So, I think in some ways it's not -- it
16 shouldn't be prescriptive, but in terms of
17 assessing the matching of the grant to our -- this
18 organization, it should be used in that framework.

19 DR. BASCH: Yeah, absolutely. I think the
20 thought is that both within solicitations there
21 could be a definition of what we're thinking about
22 here, or descriptions. But also, in the review

1 processes, as Sharon-Lise described. That's right.

2 DR. GABRIEL: Allen.

3 DR. DUOMA: I'd just like to urge us not
4 to be too literal when we talk about patient-
5 centered, that we actually look at people-centered.
6 And the whole issue of self-care and primary
7 prevention and most of secondary prevention, there
8 obviously is -- more decisions are being made in
9 those genre than everything else combined. And so,
10 we need to make sure -- I think it's hard to tell
11 from your request for proposal that we're
12 actually -- want to be engaged in those activities.

13 DR. BASCH: That's a great point, and one
14 we've spoken about at length. There are different
15 ways to think about this. For example, to what
16 extent is one interested in the perspectives of
17 populations at risk versus people with disease,
18 right? Just folks. We have spoken about that.

19 We've retained the terminology, since
20 that's the name of the Institute. But your point
21 is very well taken, absolutely.

22 DR. GABRIEL: I think Arnie, you had a

1 comment?

2 DR. EPSTEIN: Ethan, that was really a
3 very lucid, thank you.

4 So I'm really intrigued by the notion of
5 what you're trying to do. I think it's potentially
6 really important to raise the bar for methods and
7 get some standardization. And I'm trying to think
8 of how we get it into our process.

9 I can imagine easily getting into the
10 literature and becoming the standard. And the kind
11 of writing you're doing is going to help with that.

12 When I think about our process it's a
13 little more challenging. Here are some avenues,
14 but I'm wondering what you're thinking. One is to
15 get it into our Funding Announcement and saying, by
16 the way those of you who are going to pursue
17 survey-type research we expect focus groups,
18 cognitive testing, pre-testing, and on.

19 But I wonder how we get it in the review
20 process? Because we're talking about having 600
21 reviewers? And so, how do we get them to read the
22 homework of your -- and then apply it? Or is there

1 another method you're thinking of doing it?

2 Because it seems really meritorious.

3 DR. GABRIEL: I'm sure Ethan will comment,
4 but I was just going to suggest that, in fact,
5 everything that all of the work groups are talking
6 about -- that question would be relevant to all of
7 our activities and probably important for all of
8 our activities.

9 And we've just started to think about this
10 today and others might want to comment. But
11 creating, as Ethan said, a PCOR filter or PCOR
12 lens, so it's not a matter of here, read the, you
13 know, 300 papers that have been produced by this
14 group of individuals who we've funded. But how do
15 we distill that into something that we can easily
16 understand and what goes through the PCOR filter or
17 the PCOR lens, however we pull it together, we can
18 feel comfortable truly aligns with the mission of
19 PCORI and truly aligns with our definition.

20 And so, that's, you know, the discussion
21 that we've just started to have. And I don't know
22 if others want to add.

1 DR. BASCH: You know, I -- it's a great
2 comment and you know, I think we have a big
3 educational burden upon us and we really have to
4 think upon -- not a burden, but it's a mission.
5 You know, likely this needs to be a review
6 criterion. And it needs to have -- it needs to be
7 very discrete with clear materials.

8 DR. EPSTEIN: What you're talking about
9 could really raise the whole standard.

10 DR. NORMAND: And I think what we had
11 discussed with Christine, some of the ideas that
12 came around related to, you know, the Scientific
13 Review Officer who is in charge of shepherding
14 grant applications through. That's part of their
15 charge to make sure the reviewers -- we have a
16 template that says here are the criteria that judge
17 a particular application. We have a bulleted list
18 of criteria, the Scientific Review Officer is
19 charged with making sure that that review was
20 conducted to that extent -- you know, to the extent
21 possible.

22 But there are some practical steps we can

1 take. They may not be all of them, but certainly
2 there's some practical steps.

3 DR. GABRIEL: Pardon me. Yeah, I was just
4 -- if I have the Chair's permission I was just
5 going to remind the Board that we really do have
6 three other presenters. Not that you've done this
7 before, but Dr. Weisman?

8 DR. WEISMAN: Just real quickly, because
9 the thought did occur to me. You did talk about
10 workshops in your presentation. And the entire
11 Board has talked about some kind of meetings and
12 others around PCOR that this may be an opportunity
13 for us to offer, you know, training of two
14 different kinds. One of them is for people who are
15 already skilled in the art of doing research who
16 have to learn about PCOR. And the other is, that
17 we want to attract individuals who have never
18 perhaps done any kind of outcomes research or
19 comparative effectiveness research but are
20 interested in the kinds of issues of patient-
21 centeredness that we are, which would be another
22 kind of training obligation that we would have.

1 Maybe because they would be starting with a blank
2 slate they would be more receptive to the training.

3 DR. GABRIEL: Okay, thank you. I think
4 we'll go on. Actually, I'll make a really quick
5 comment before we do the discussion, especially
6 Arnie's comments really reminded me of the
7 discussion we had at our table yesterday afternoon
8 with the Board where Dr. Washington and others were
9 talking about the importance of changing the
10 culture and changing the conversation. And in
11 addition to, hopefully, if we create a standard
12 that can be used for all of our research and others
13 will adopt it that could have the impact of
14 changing the culture and changing the conversation
15 around PCOR.

16 So, Dr. Meltzer?

17 DR. MELTZER: I'm glad to talk about the
18 activities to-date of the Research Prioritization
19 Work Group, which in addition to myself includes
20 Jean Slutsky, John Ioannidis, Al Berg who is our
21 representative from the Report Assimilation Group
22 Committee, and Clyde Yancy.

1 The mission of our group is to provide
2 guidance concerning the use of methods to inform
3 the establishment of research prioritization
4 approaches that best fulfill PCORI's mission. What
5 does that mean? It doesn't mean that we're going
6 to set research priorities. It means that we're
7 going to try to provide advice that is useful in
8 terms of developing a process that can help PCORI
9 make better decisions. And, in particular, to look
10 at the role of methods in doing that.

11 And our targets are really both to help
12 the Board as it develops these processes and to
13 help the broader community that will participate in
14 PCORI activities as they participate in this
15 process. So that they're able to put in better
16 applications that better address these objectives.

17 Our scope of work is really focused most
18 immediately on producing a section for the report
19 that will be due in May that will address the role
20 of methods in informing the establishment of
21 research priorities.

22 There's really the core part of this is

1 that we'll be commissioning some white papers on
2 various methods that we think may be useful to
3 PCORI as it tries to establish a process for
4 research prioritization. These include the
5 generation of topics, the role of gap analysis and
6 systematic reviews, value of information analysis
7 and peer review. And I want to take a moment to
8 talk about each of these. Because I know it may
9 not be clear to many people what each of these
10 means and how it may be useful.

11 So, topic generation really is about
12 generating a sufficiently large list of topics that
13 might be considered for research to make sure that
14 as we prioritize we're prioritizing among the right
15 set. It's well-known in decision-making that one
16 of the classic failures of decision-making is not
17 considering the right set of options when you
18 begin. So you have to start with a large set of
19 options, and there are a variety of ways to do
20 that.

21 One way, of course, is to involve the
22 people who will actually be making the decisions.

1 And so, we'll be working very closely with the
2 patient-centeredness group to look at the role of
3 patients and other stakeholders in the generation
4 of topics.

5 Another approach, a method, as it were, is
6 to do environmental scans that look at the whole
7 literature that's published in the area and try to
8 generate topics that might be of use. One
9 particular way of generating topics that is often
10 used in health is systematic reviews. And within
11 systematic reviews, gap analysis is a method that's
12 often used to identify particular questions that
13 seem most promising for study. And there's been a
14 rich set of work done in this field, and a lot of
15 it has been recently reviewed by AHRQ and so we'll
16 be standing on the shoulders of that work as we
17 review these topics.

18 Once a sort of adequate set of topics has
19 been generated and some work has been done to try
20 and focus them and ask what particular questions
21 might be asked, then you really face this question
22 of prioritization and you can think about

1 prioritization as having sort of a quantitative
2 element to it on the one hand, and a qualitative
3 element on the other.

4 And value of information analysis is a
5 particular approach that's generated increasing
6 interest really around the world to try and
7 quantify the prospective value of research studies
8 in terms of their, for example, population health
9 impact, although they could be done in other ways.
10 And one of the interesting things we'll be doing is
11 trying and extend these methods. For example, to
12 reflect in particular, the variations among
13 individuals. And this will be another place where
14 the involvement of the patient and the patient
15 perspective is critical.

16 But, these value of information methods
17 have their limitations. There are certainly
18 elements they can't well reflect, and human
19 judgment is critical, and this is where peer review
20 process is really going to be critical. And by
21 peer review, I don't mean peer review of academic
22 papers or publications as people often think about

1 it. We really mean peer review of scientific
2 proposals.

3 And at first blush you might not think of
4 this as a method, but it really is a method. It's
5 a tool that we use, and there are certain things
6 that we know and often things we don't know about
7 what makes peer review more or less effective. I
8 think the question that was just asked about how
9 methodological standards will be incorporated into
10 the peer review process is a beautiful example of
11 the things that I think PCORI will want to study to
12 make sure that the reviews that are produced are
13 ones that really best help us realize our mission.

14 Now these four white papers together will
15 each examine these topics, each of which we think
16 is important. But it's really critical to
17 understand how they fit together. And so, we'll be
18 holding a conference in January of next year to try
19 to synthesize these papers where the individuals
20 who have prepared them will discuss them and try to
21 understand what are the strengths and weaknesses of
22 each approach, and then how they all really fit

1 together.

2 So our progress to-date. What we've done
3 so far is to identify these methodological areas of
4 interest and research prioritization. We've
5 identified the first interim researcher to begin to
6 assist our work group, and we've released an RFA
7 for these white papers that was released on
8 September 9th.

9 Our next steps are to wait for these
10 proposals to come in on September 30th. And then,
11 we'll have about a two-week period to review them
12 and select among them. And then, on October 14th
13 we'll announce the awardees for these papers.

14 We recognize that the proposals that we
15 get may not fill in all the areas we need, so we'll
16 be using interim researchers to fill in some of the
17 areas that aren't adequately addressed though the
18 RFAs.

19 And then, one of the really most important
20 things we'll be doing over the coming months is
21 trying to work very closely with the Board, we
22 hope, to explore the role of these research

1 prioritization methods vis-à-vis the broader PCORI
2 prioritization process. In other words, how are
3 these methods actually going to be useful given the
4 process that the Board develops as it does so? And
5 we hope that that will be a very good opportunity
6 for us to work closely with the Board.

7 And so, this really leads to our question
8 for the Board, which is how can we best work with
9 you to understand your evolving plans for research
10 prioritization so that the methods we are studying
11 can be of most use to you as you develop that
12 process?

13 So, thank you.

14 DR. GABRIEL: Rick?

15 DR. KUNTZ: David, that was great.

16 DR. GABRIEL: Thank you, David.

17 DR. KUNTZ: In your prioritization
18 process, it seems like your initial first effort is
19 to focus on the gaps and also on information value.

20 How do you incorporate the needs analysis?
21 For example, IOM would say, you know, what's the
22 largest burden on morbidity and mortality? Do you

1 have a methodology for looking at these?

2 DR. MELTZER: Yeah, so actually you think
3 of value of information analysis as sort of a suite
4 of tools. And needs analysis, in some sense, is
5 one subset of that suite of tools. Very much like
6 analyzing burden of illness. But fundamentally,
7 they are quantitative approaches that look at one
8 element of what would be a calculation of sort of
9 the expected benefit of a research study.

10 One of the huge challenges in value of
11 information analysis is that you very frequently
12 are lacking data that you would like to have
13 available. And so often it ends up collapsing to a
14 more simple measure, like burden of illness or
15 needs. And in those cases, I think it's often
16 still valuable under some circumstances. But
17 having the value of information lens on it helps
18 you understand also the limitation.

19 For example, something may be a very large
20 problem but there may be very little we can do
21 about it. And that's probably not a great area for
22 research, although sometimes you try anyway.

1 DR. GABRIEL: Bob and then Allen.

2 DR. ZWOLAK: David, that was a very nice
3 presentation. The question I had is how do you see
4 the work product of this research prioritization
5 work group fitting into the timeline of our other
6 responsibility of developing the research
7 priorities?

8 DR. MELTZER: Yeah, we've thought a lot
9 about that and at moments tried to accelerate
10 things even more rapidly to do that, although we of
11 course have to respect appropriate processes in
12 doing that.

13 But honestly, I think the most important
14 answer to that question is that the research
15 priorities will change over time and the process
16 will develop. And the way I view the current
17 objectives, it's to set the first set of research
18 priorities. And those I am sure will evolve as
19 PCORI learns more about Patient-Centered Outcomes
20 Research in general as its Research Agenda
21 improves.

22 And so, our hope is that this can be a

1 continuing process over time. One that -- that
2 theme of sort of continuing improvement over time I
3 think is an incredibly important one. And it's
4 one, for example, that I hope we'll really learn to
5 apply to our peer review process.

6 One of the striking things even in the
7 early work that we've done is how little strong
8 evidence there is about what makes for a strong
9 peer review process. And the amazing thing about
10 this is that this is something in our control. We
11 have the ability to generate this evidence. And I
12 hope that PCORI will be a major contributor in
13 improving the science of the peer review process.

14 DR. GABRIEL: Allen?

15 DR. DUOMA: Question and suggestion. The
16 question is, in doing VOI, value of information
17 analysis, is there anybody who has been able to
18 quantify the value of relieving the fear that
19 somebody has from -- with a severe headache because
20 they think they have a brain tumor? That's an
21 example of the direction.

22 And I'll hold off the second.

1 DR. MELTZER: Yeah, I can't answer that
2 specific question.

3 [Laughter.]

4 DR. MELTZER: But nevertheless --

5 DR. DUOMA: In that bucket.

6 DR. MELTZER: But in that bucket of sort
7 of specialized questions that seem amorphous and
8 hard to answer, I think there are methods out there
9 where you ask people about their willing -- their
10 eagerness to solve that problem as opposed to some
11 other problem or their willingness to pay to do
12 that. Their quality of life in a state of anxiety.

13 These are not perfect methods. But they
14 are out there and we can think about them and learn
15 about them and learn about their strengths and
16 weaknesses, where they give similar answers, where
17 they give different answers. We can scale the
18 prevalence of that compared to the prevalence of
19 other things.

20 I do not think there are perfect measures
21 of any of these things, but our goal has to be to
22 try to make them better over time as we really

1 understand also what their limitations are.

2 DR. DUOMA: Great. No, I think it's
3 fantastic that you're going down there. I
4 personally feel that a great deal of the
5 unnecessary utilization of medical care, we think
6 it's unnecessary, is trying to relieve fear and
7 anxiety, which we don't measure.

8 With regard to how you can work better
9 with us or more with us, whenever you have
10 information like the white papers, whatever you can
11 share I think, you know, please share.
12 Particularly once you've selected at some point,
13 then you probably can share that information more
14 than the others.

15 And I would suggest we look at how we can
16 just put that up online so everybody can see it as
17 well at the same time.

18 DR. MELTZER: That would be great.

19 DR. GABRIEL: Thank you. Harlan and then
20 Harlan and then Steve.

21 DR. KRUMHOLZ: Thanks, David. That's
22 really -- it's really great. You know, it does

1 seem like it's constituency-based in how you
2 talked.

3 I was thinking about it just in the
4 context of what we're doing if you were a Review
5 Committee and you instructed the Review Committee,
6 as you look at these grants. Pretend that they're
7 completed, pretend they've got the finished
8 product. Pretend, though, that they own it and
9 you'd have to buy from them in order to free it for
10 the world. How much would you pay for it, you
11 know?

12 DR. MELTZER: Yes.

13 DR. KRUMHOLZ: Because it sort of puts in
14 perspective for you, though, how valuable is that
15 information that represents the product of that
16 grant. And if they owned it and they wanted to
17 sell it and we were in that business of trying to
18 free it for the country, you know, that would put
19 certain perspective on the way you thought about
20 the review process. And putting an onus on us to
21 say we really want useful knowledge. Because if
22 actually we'd say, gee, if I had that, I don't want

1 to pay a dollar for it but we're going to pay \$5
2 million to do the study, there's a little
3 discordance in that piece.

4 My question for you about this is that it
5 seems like it would work better when you're getting
6 very granular around specific areas, but if our
7 decision would be to pursue more thematic and
8 paradynamic approaches towards our priorities and
9 be more investigator-initiated with regard to what
10 we're going to respond to. That is, we say, we're
11 interested in patient-centeredness, we articulate
12 our values, we put out our priorities. But we
13 recognize our constraints.

14 We're asking people to really put together
15 teams of people from the community, practitioners
16 and researchers, in order to address problems that
17 they're going to -- they think are important. And
18 that's difficult in and of itself. So we want
19 people to figure out what their sweet spots are.
20 And we're going to judge the grants based on what
21 they're going to produce, but we're not -- we in
22 the end are not sure we're going to be smart enough

1 to know who can create that opportunity. That it's
2 not just the priority but it's the opportunity.
3 How does that fit into this process?

4 DR. MELTZER: Yeah, I think this question
5 of how good we are at identifying the most
6 important questions is a wonderful question. And
7 I'm glad to hear skepticism as to whether we're
8 able to do that well.

9 And I think this emphasizes the importance
10 of studying areas like topic generation. And if
11 one, in fact, recognizes that we're not always so
12 great at generating topics that push us towards
13 more investigator-initiated awards.

14 The second thing that I would say is that
15 tools such as value of information analysis may be
16 very useful to investigators as they write their
17 applications. And one of the questions our group
18 will look at is the extent to which those methods,
19 such as value of information, can be practically
20 applied by grantees in describing the significance
21 of what they're doing. I mean, it's really quite
22 interesting. Sort of no self-respecting

1 investigator would put in a clinical trial without
2 a power calculation. But in the significant
3 section of our grants we sort of say, oh boy, this
4 is a big problem. And that seems to be enough for
5 everyone.

6 Hopefully, we can learn to do a little
7 better about that. Now, one has to be careful
8 because you can't do \$150,000 value of information
9 analysis to prioritize a \$25,000 research project.
10 So, we've been thinking a lot about that and I and
11 others have done some work with AHRQ looking at
12 less-expensive ways to use value of information
13 principles as a way to inform priorities. And so,
14 those may be some examples.

15 This is sort of a suite of tools, and we
16 want to help people think about the best way to do
17 these things.

18 DR. KRUMHOLZ: And I think just a quick
19 follow up. I mean, just the framing and the
20 conceptualization, even if people don't go through
21 the entire process of doing the entire study. I'd
22 love to see that in agreeance where people are at

1 least making the case in that construct. That's
2 really great.

3 DR. MELTZER: Absolutely. There are
4 beautiful examples even recently of large,
5 expensive clinical trials that were funded despite
6 the fact that there were very likely substitutes
7 for the treatment being studied that were very
8 close. And, in fact, were quite likely to be
9 available even before the study was done. And
10 those are investments that you should be careful
11 with making.

12 DR. GABRIEL: Harlan W.

13 DR. WEISMAN: Yeah, I think the current
14 conversation covered the comment I was going to
15 make, which was that maybe more than our
16 prioritization, our immediate prioritization,
17 because we do want to accelerate that to some
18 extent beyond your timeframe. It is the actual
19 grant prioritization, granting process where this
20 may be of terrific value. Plus as you indicated,
21 the ongoing look at priorities.

22 The question I had about this is one of

1 the things that comes up in peer review a lot, but
2 just in life in general, are the pre-suppositions
3 or pre-conceptions that we all carry around with us
4 about how the world works. That often means that
5 new ideas or new ways of doing things don't get
6 done immediately. And there's lots of, you know,
7 at least anecdotes of somebody who had a thought
8 about something really important and couldn't get
9 funded, you know, for many years because the usual
10 study sections just didn't get why this was so
11 important.

12 And so, what I was wondering is, in any of
13 what you're doing is there anything that unearths
14 or flags the idea that lets us know whether, you
15 know, how much bias is coming in -- in terms of our
16 -- not the conscious bias, but the -- maybe the
17 unconscious preconceived notions.

18 DR. MELTZER: Yeah. We haven't gotten
19 deep enough into our analysis of what we know about
20 the peer review process to answer that ideally.
21 But what I will say is that clearly there have been
22 changes in some institutions, grant review

1 processes such as NIH, to try to put more emphasis
2 on innovation, for example, as a value.

3 I'll also say -- and this is very much a
4 sort of personal belief as opposed to any
5 reflection of any belief on the committee. That
6 certain elements of process in grant review such as
7 triage processes tend to make it more difficult for
8 innovative ideas to come through, because people
9 may not see the value in innovation. It just seems
10 confusing or doesn't make sense to them.

11 And so, I hope that one of the areas we'll
12 look at very carefully is the triage processes. I
13 think many people in the room may know NIH now has
14 a process where the bottom half of applications
15 aren't discussed. And my sense is that the failure
16 to discuss applications may lead to less
17 appreciation of innovation. And I'm not sure
18 that's in the long-term interest, particularly of a
19 field such as Patient-Centered Outcomes Research.
20 Where really in many ways we're all about
21 innovation.

22 DR. GABRIEL: I think it was Joe and then

1 Steve.

2 DR. SELBY: Just struck me that yesterday
3 we were talking about the way in which PCORI was
4 blessed to have a stellar Board and a stellar
5 Methodology Committee. And that most organizations
6 don't have particularly a Methodology Committee on
7 day one. And so, these presentations have already
8 kind of been driven home, the common ground and in
9 the utility. The need we have for your input.

10 I wanted to just put two other areas on
11 the table. I mean, the first is the National
12 Priorities. I know that in some ways some of your
13 methods speak more to selecting the right research
14 question given the priority, but particularly in
15 the area of topic generation it, I think we'd like
16 a chance to run our strategy by you before we go
17 out and engage with large stakeholder groups. And
18 I know your committee is especially strapped. So,
19 I think I propose that we come to your committee.

20 And since you haven't gotten to hear our
21 presentation yet, run it by you. Unless you're
22 here tomorrow morning we'll be doing it again

1 tomorrow morning. But -- and get your input with
2 respect to topic generation.

3 The second is, we've said that you know,
4 the review process we're going to go through with
5 NIH for the Pilot Projects is itself a pilot. We
6 want to test how it goes. And so, I think it would
7 be extraordinarily, I think I said this a while
8 ago, but now I'll redouble my comments that we said
9 we want to evaluate that. And I think it would be
10 just a really extraordinary opportunity to evaluate
11 whether the theme of patient-centeredness came
12 through in the process, given that there were
13 patients there. Given that we had particular
14 criteria and instructions beforehand.

15 So, thank you.

16 MS. SLUTSKY: Can I just respond to that?
17 I mean, in addition to -- I'm on the sub-group too.
18 And in addition to, you know, interacting with the
19 sub-group there are some ARRA-funded projects that
20 could potentially help you. One is, I can tell the
21 jet lag is jumping in, is a process of developing a
22 methodology for horizon scanning. And that was

1 funded by AHRQ under ARRA, and we're about halfway
2 through that process. And white papers are going
3 to start coming out for public comment in the very
4 near future. So, not only will that inform this
5 sub-committee, but I think it will be enormously
6 useful for PCORI.

7 We also have a series of papers on
8 research gap analysis that are coming up in draft
9 form that will predate a more thorough review of
10 gap analysis that will be useful to PCORI.

11 DR. GABRIEL: Steve?

12 VICE CHAIRMAN LIPSTEIN: David, can you go
13 back one slide? Arnie can help. No, one more.
14 One more. There it is. Value of information
15 analysis before peer review.

16 Harlan triggered this question in that he
17 brought up the subject of investigator-initiated
18 research. And if PCORI, you know, if all
19 investigator-initiated research today was patient-
20 centered, you would wonder why we would have a
21 Patient-Centered Outcomes Research Institute
22 because there wouldn't be any question as to

1 whether it was patient-centered or not.

2 So, as you do value of information
3 analysis, and you talk about segmenting the
4 population into different groups which may have
5 different priorities, okay? So, different groups
6 of people may have different priorities. And we
7 want to be sure that whatever we fund is of the
8 greatest benefit to the most people.

9 And an investigator can always find a
10 group of patients or a cohort of patients for whom
11 their research is a priority. So how will that
12 part of this help us to do that hard work and to
13 assure the public that we have picked the right
14 priorities? In other words, is there something
15 inherent in that third blue box that gets us there?

16 DR. MELTZER: I think there are some tools
17 that help us. The way that I've personally found
18 the most useful in thinking about this is that
19 there's a set of individuals who each have
20 different preferences. And because of their
21 preferences they get different value from different
22 pieces of information or different decisions that

1 could be made.

2 And when you provide information or you
3 make a decision, you are helping different sub-
4 groups differentially. And so, there's this idea
5 of sort of the expected value of individualized
6 care. What's the value to the population when you
7 make care more individualized? And this is work
8 that Anirban Basu, who was the lead author on,
9 Anirban Basu was one of my students in Chicago.
10 He's now here at the University of Washington. And
11 he and I and now others have done work trying to
12 quantify what the value is to making those
13 individualized decisions.

14 And when you do that, you get the value to
15 the person or to the group. You can then think
16 about how large that group is and how much value
17 you've produced for that.

18 Now, that may or may not be enough to make
19 a decision because, of course, if the group is very
20 small but the benefit is very big you may feel
21 differently than an outcome where you have a very
22 large number of people who benefit but each benefit

1 a little. So, distributional concerns can matter.
2 And a lot of that can be fed into decision-making.

3 So, I think what we want to begin to do is
4 to try to characterize the distribution of benefits
5 to sub-groups as best we can, and understand what
6 they are. And those sub-groups can be very
7 complicated. They're not just people who differ in
8 preferences or health attributes. They could be
9 people who differ in choices and the decisions they
10 make and the economic resources they have
11 available. And how informed they are. And each
12 one of those things can shape this. And that's
13 where this gets to be really challenging research.

14 But I think these are somewhat answerable
15 questions.

16 VICE CHAIRMAN LIPSTEIN: So, given how
17 challenging it is that you just mentioned, it
18 sounds like it would be unreasonable for PCORI to
19 require that every proposal that we receive go
20 through that distribution of analysis. In other
21 words, what's the value of the benefit to how many
22 people? Is it big benefit to few or little benefit

1 to many?

2 We couldn't require -- could we require
3 that of every proposal?

4 DR. MELTZER: No, I don't think it's
5 reasonable. But I think what one can move towards
6 is an understanding of those issues.

7 For example, you could say -- to give an
8 example. We've done work on intensive therapy for
9 diabetes. We would argue -- I would argue that
10 based on our research, intensive therapy for
11 diabetes particularly among older people often
12 causes as many harms as it causes benefits.

13 But we also find that there's a sub-group
14 in whom it's clearly beneficial, okay? Identifying
15 that group, focusing on that group and what this
16 research could mean to them would be an example of
17 something that would move towards this and not be
18 an impractical way of thinking about it.

19 So, you know, we are never going to make
20 perfect prioritization decisions but we can move
21 towards better. And that, I think, is the goal.

22 CHAIRMAN WASHINGTON: Can I just say on

1 this question, Steve, I would see us applying this
2 at the Board level, sort of over continuum of the
3 research that we are funding, rather than having to
4 set a requirement.

5 You know, when I saw that, you know, to me
6 that's where the impact is and the real value added
7 of such an analysis.

8 VICE CHAIRMAN LIPSTEIN: Yeah. Gene, what
9 I still don't have an appreciation for is how hard
10 it is to do that. So, if we do that at the Board
11 level, is that a hard thing to do?

12 UNIDENTIFIED SPEAKER: [Off microphone.]

13 DR. MELTZER: Yeah, to make the -- that
14 there are older people who have very long life
15 expectancies and should be thinking about things
16 10, 15, 20 years down the road.

17 VICE CHAIRMAN LIPSTEIN: Right. So I
18 guess what I'm hearing is that that's a construct
19 we will be able to employ even though it's very
20 hard to do.

21 DR. MELTZER: To some degree we should be
22 able --

1 VICE CHAIRMAN LIPSTEIN: Which you said
2 was very hard to do.

3 DR. MELTZER: -- to add some of that into
4 the process. And hopefully over time we'll get
5 better at it.

6 DR. GABRIEL: Imperfect but helpful. So,
7 we'll go to Harlan and then Mark and then we need
8 to go on to Steve's work group.

9 DR. WEISMAN: I really liked the way David
10 Meltzer answered your question. But just to
11 reinforce parts of it, because you said, how do we
12 ensure that we do the greatest good for the
13 greatest number. And that's, you know, Dave Hume,
14 another David. That was his philosophy that was,
15 you know, really troubling because what happens in
16 society -- and that was his rule of society, is
17 that the most disadvantaged people who may be small
18 in numbers suffer the most at the hands of
19 optimizing the greatest good for the greatest
20 number.

21 So, clearly wanting to do that. You know,
22 and there were counter-philosophies saying that

1 what society should do or PCORI could do would be
2 to help the most disadvantaged, because they need
3 the help the most.

4 And the reality is, it comes down to
5 judgment. And I would therefore say what Gene
6 said, which is that we should take these factors
7 into account in deliberation. But when it comes
8 down to it there aren't any easy rules here. It
9 requires discussion and debate and going back and
10 forth to discuss these various kinds of factors
11 that are important. And it's never as easy as some
12 arbitrary greatest good for greatest number, or
13 help the ones that are least able to take care of
14 themselves, or categorical imperative.

15 DR. HELFAND: Mark Helfand, Methodology
16 Committee. So a lot of these comments, Steve's and
17 Harlan's earlier comment, they fit together in
18 this, you know, we're already talking about trying
19 to get them into the process for peer review and so
20 on. But there are a couple of points I just wanted
21 to bring out because -- so we don't lose them.

22 So one of them is, you know, ultimately

1 how do we tell if it's the real thing? And it's
2 really an important question that people care about
3 that's affecting their decisions and it would help
4 them make better ones and so on? And I think, you
5 know, even if they can't do a big analysis, we have
6 agreed that's not what they have to do.

7 People who write proposals typically sort
8 of say stuff like that. They say, oh, this is a
9 very important question that affects a zillion
10 people and everybody cares about it. How do we go
11 from there to saying whether that's genuine or not?
12 And I'd connect that a little bit to, I don't know
13 if I'm doing this fairly, Harlan, but to Harlan
14 Krumholz's earlier comment about questions coming,
15 if I could paraphrase a lot, you know, questions
16 come from real lives and real practice. And if you
17 can harness that ability to get a feedback loop
18 between what's actually happening and people who
19 cared about it into what PCORI's Research Agenda
20 is, that helps you with, I don't know what the word
21 -- the right word is, but with the provenance of
22 where these questions came from and can help you a

1 little bit.

2 And so, there is an element of that that I
3 think we can try to join with these other
4 approaches that we're talking about.

5 DR. MELTZER: Gene, could I just add one
6 last comment? One of the wonderful things I've
7 learned from Steve Pauker over the years, for those
8 of you who don't know him, is really one of the
9 pioneers of clinical decision analysis, is the idea
10 that decision models when they're constructed are
11 invaluable not so much for the results they give,
12 but the process they lead you through as you get
13 there.

14 And I think that's very much the hope with
15 a lot of these research prioritization methods.
16 That they'll get us thinking about the right
17 things, and then with a robust peer review process
18 those issues will be brought forward and discussed
19 and we'll get a sort of comment about the
20 distribution of benefits. I mean, how often do you
21 hear that in an NIH study section or any study
22 section? Not too often. So, I think this is one

1 of the hidden benefits of methods, even when they
2 have imperfections.

3 DR. GABRIEL: Thank you, David. Dr.
4 Goodman.

5 DR. GOODMAN: Next slide.

6 UNIDENTIFIED SPEAKER: You have to do it
7 yourself.

8 DR. GOODMAN: Oh, I see. I have to do all
9 this work myself. Okay, there we go. Don't we
10 have a committee for this clicking?

11 [Laughter.]

12 DR. GOODMAN: Okay. So, our working group
13 does everything else. So, we are the Methods Work
14 Group of the Methodology Committee. And, oh,
15 sorry. Yeah, here we go. See, it didn't work.
16 There we go.

17 And this is made up of myself, Mike Lauer,
18 Robin Newhouse who is my co-chair, Mark is the
19 liaison to the Assimilation Group, Sebastian
20 Schneeweiss, and Sharon-Lise is -- comes to our
21 group whenever she can as the designated
22 biostatistician. And we also have a new

1 researcher, Crystal Smith-Spangler who is right
2 here behind me, who is also responsible for some
3 wonderful work in preparation for this meeting.

4 So what is our scope of work? You've
5 heard some of this already. We're directly
6 responding to the legislation in terms of two of
7 the deliverables specifically that we have to
8 produce by May. Which is, one, developing a
9 translation tool. We like to think of it as an
10 instrument or tool rather than a table because a
11 table implies a particular format that helps guide
12 researchers and reviewers from the research
13 questions that are posed. And so, in this sense
14 we're taking a hand-off from Ethan's group. We're
15 a little bit silent on how that question should be
16 posed, in the sense that we don't explore the
17 patient-centeredness of it. But that's a critical
18 issue here, is whether the question is the kind of
19 question that PCORI should be investigating.

20 And we go from there outlining a set of
21 criteria that will specify those designs that best
22 address the question. And perhaps most importantly

1 for the Board and for reviewers, that are really
2 non-responsive to that question. And that might be
3 our most important contribution to the committee.

4 The second mission and track of work is,
5 again, outlined by the legislation, which is to
6 review and issue statements on methods standards.
7 Now, we don't love the word "standards" because
8 there are very few methodologies that aren't in
9 flux and aren't improving. And standards also can
10 be a straightjacket and prevent innovation.

11 So, we see these as guidelines for, in a
12 sense, best practices in implementing the various
13 methodologies that might be employed in the design
14 and analysis of studies. And these are both
15 abstracted from formal methodologic standard
16 statements that have been issued in just a few
17 areas by expert bodies like the IOM or the FDA or
18 other entities. But the vast majority of methods
19 don't have official bodies that issue standard
20 statements.

21 So, a lot of this work will be work
22 synthesizing methodological papers and guidances,

1 again, about best practices. There are plenty of
2 technologies about which there are books but
3 they're not what we would call expert bodies that
4 issued standards. But they're certainly standards
5 of a sort in terms of outlining current best
6 practices.

7 And the flipside of this is identifying
8 areas for further methodologic research. So in
9 looking at where the state of the methods are
10 today, we also will identify where they need to go,
11 particularly in the area of Patient-Centered
12 Outcomes Research, which hasn't been a huge focus
13 of many of the methods that we'll be talking about.

14 The third stream is to look at the whole
15 question of the use of electronic data records and
16 systems as a platform for patient, you know, for
17 PCOR. And this we think is a real opportunity, as
18 we put here, for PCORI to take a leadership role,
19 because there's a huge amount of activity going on
20 in this country in the electronification of health
21 data. Very, comparatively little attention has
22 been given to how that information can actually be

1 used to answer important research questions.

2 And these systems are being designed and
3 implemented as we speak, and in many ways and in
4 many places maybe getting in the way as much of
5 good health research as facilitating it. And there
6 have been a lot of activities to help bridge that
7 gap, and we can be a central federal leader in
8 making sure that these activities are brought to
9 the attention of -- at a high level sustained,
10 perhaps, with funding and used to establish
11 standards for future directions of development of
12 these networks, many of which don't talk to each
13 other or don't capture the information we need.

14 So what progress have we made to date in
15 these three areas? We -- and we'll talk about this
16 in a second. We've established initial
17 specifications of the dimensions to be used for the
18 transaction instrument. And I'll talk about those
19 momentarily.

20 We've developed a prototype for standards
21 documents that combines expert statements and
22 published examples from the literature as well as

1 our own input. And finally, in the electronic data
2 arena, where we feel that we need a lot of
3 education ourselves, because one of the problems in
4 that area is that the people who are developing the
5 systems and the methodologists are very separate
6 communities, for the most part. And in fact,
7 there's very few people on our committee with any
8 expertise in this area.

9 Now Jean, her shop has been funding one of
10 the most ambitious series of meetings and papers
11 and they call it the Electronic Data Methods Forum,
12 or EDM. And that's really just in its first year.
13 And many of the products of that research program
14 are actually just coming out right now. They had
15 their first meeting in February, but they had
16 commissioned a series of white papers that are
17 directly on point that are actually due, I think
18 literally, this week or something like that. So,
19 we're going to benefit a lot from them.

20 Our Deloitte folks who have actually had
21 some expertise in this area, have been interviewing
22 a wide array of opinion leaders in this area to

1 both set out what they and we think are the key
2 issues that PCORI should think about, and to set
3 the stage for the planning of a workshop in January
4 where these -- where those issues are discussed.

5 So this is -- we don't have a specific
6 agenda in this area. What we're doing is, we're
7 acting in an exploratory and advisory role to help
8 you figure out what that agenda might be, both for
9 future research priorities as well as for
10 methodologic development.

11 Sharon, did you have a question?

12 DR. LEVINE: I just wondered if you're
13 including in the work the developers of these EHR
14 software systems?

15 DR. GOODMAN: So, yeah, absolutely. Yeah.
16 They are key, if we don't get them in port, nothing
17 will ever change. That is definitely a very
18 important constituency, a key constituency.

19 So we're not showing you the full agenda
20 for the electronic data methods work. I'm just
21 showing you here what we're talking about when we
22 say dimensions and format.

1 So here are examples of the dimensions to
2 be used or proposed to be used in the translation
3 instrument. And we start, of course, with a
4 patient-centered question that defines the
5 condition, the population, the treatment, the
6 comparators, and perhaps most importantly the
7 outcomes and the setting in which the research is
8 to be done.

9 And then, the choice of design or the
10 choice of acceptable designs involves weighing a
11 lot of factors. And these factors are those
12 intrinsic to the research design itself, which can
13 include what we call internal validity, or is, how
14 far are we away from the answer on average, just by
15 nature of the design of the research.

16 External validity that is the population
17 we're studying close to the population in which we
18 actually want to know the results. Precision, are
19 we far from the result simply because the study is
20 too small? And you can be far away by chance. A
21 key issue is, of course, heterogeneity. A
22 technical term for, are there sub-populations?

1 Maybe not down to individuals, but as close as we
2 can come, that have a different profile of risks or
3 benefits such that we should either be studying
4 them, avoiding them, or making -- tailor treatments
5 on the basis of that profile. And, of course,
6 there's the ethical aspects of the research itself.

7 Extrinsic factors, which again, also often
8 be more important than the inherent properties of
9 the design, are how quickly does the decision have
10 to be made? Which can be a function of both policy
11 issues or is the technology changing every six
12 weeks? And we can't wait three years to have an
13 answer about technology that's going to be
14 obsolete.

15 The logistical burden. We may not be able
16 to literally have the money to study in a
17 randomized controlled fashion 10,000 subjects. So,
18 the complexity and the cost.

19 Now one point there that has come up in
20 our conversations is that's something that research
21 funding agencies can affect, because the logistical
22 burden of setting up many of these studies is often

1 huge simply because data networks or collaborative
2 systems haven't been set up. Or the ones that were
3 set up in prior research enterprises have been
4 destroyed because the funding didn't continue.

5 So this issue of the logistical burden,
6 which often is a deal-breaker when we're talking
7 about the optimal studies, is something that might
8 be on PCORI's agenda for the future. Which is, how
9 to make the best studies easier to start? And so,
10 we don't build and destroy, build and destroy the
11 networks that are so hard to get together to make
12 research easier.

13 And finally, there are the constraints
14 that we all know about. Is the data in the data
15 systems? And this interfaces with the Electronic
16 Data Initiative. Is it there, was it measured?
17 Was the outcome measured? Were the other patient
18 characteristics measured?

19 Again, that's often where the research
20 decision is set. You might want to do a -- you
21 might have a great platform for retrospective
22 study, but the data is not in the data system. And

1 other things like is randomization possible?

2 So those are the kinds of dimensions we're
3 thinking about. These may be tweaked, they may be
4 added. But it's all these things that enter into a
5 typical consultation. And hopefully, we'll be able
6 to combine these in a creative, user friendly way
7 so we can define which approaches are most within
8 the acceptable range and which ones are really not
9 things that should be considered as responsive to
10 the questions posed.

11 Yeah, Steve.

12 VICE CHAIRMAN LIPSTEIN: Can I ask a
13 question? Going back up to the top where the
14 question -- where you show the question -- you say
15 condition, population, treatment and comparator.
16 The issue of comparability of populations. So,
17 many times the medical community will come back and
18 say it's not just comparing the treatment to a
19 comparator, but my patients are different.

20 DR. GOODMAN: Yeah.

21 VICE CHAIRMAN LIPSTEIN: So, how do you
22 deal with the questions of population

1 comparability?

2 DR. GOODMAN: Well, that's in this
3 external validity or generalizability or
4 transportability. That's the second bullet there.

5 VICE CHAIRMAN LIPSTEIN: That's where that
6 comes in?

7 DR. GOODMAN: Yeah, that's where that
8 conceptually comes in. The question is, how do you
9 actually deal with that? And then, you have to
10 look very, very carefully at what are the
11 dimensions on which they're saying the populations
12 are different? Are they saying they're different
13 because, you know, they are a different height and
14 a different hair color? Are they different in some
15 way that there's actually a plausible either
16 biologic explanation or evidential basis for saying
17 that population is different?

18 It's not enough just to say my patients
19 look different. There has to be an evidentiary
20 base for saying they are different, or a reason to
21 explore that in the studies. I mean, that may be
22 the purpose of the study is to explore the

1 difference between those populations. That can be
2 an aim of the study.

3 We may already know that X treatment works
4 on average for a given population. But there may
5 be evolving information that suggests that a
6 particular genotype or a particular sub-group or a
7 racial group is in fact not responsive or is
8 subject to more harms. That's the reason for a
9 study.

10 VICE CHAIRMAN LIPSTEIN: So, but it isn't
11 just biological differences. It can also be
12 environmental differences.

13 DR. GOODMAN: It could be.

14 VICE CHAIRMAN LIPSTEIN: In light of
15 circumstances.

16 DR. GOODMAN: It could be if they
17 plausibly affect the effect of treatment, yes.

18 DR. GABRIEL: Do you want to take
19 questions now? Or do you want to go to your last
20 slide and then take them?

21 DR. GOODMAN: Well, I'll take questions on
22 the Translation Table part.

1 DR. GABRIEL: Okay.

2 DR. GOODMAN: And then -- yeah.

3 DR. DUOMA: If we're truly patient-
4 centered, it's not just the effective treatment,
5 it's the desire for outcomes that can vary from
6 patient population to patient population as well.
7 The treatment can be the same, it's just I don't
8 want the result that that treatment gives and that
9 gene does.

10 DR. GOODMAN: Right. Well, what that
11 person needs still is the evidence in which those
12 outcomes are measured. And one person may put
13 weight on one outcome, quality of life, and the
14 other patient may put emphasis on survival. And,
15 you know, you can look at the same study and see
16 that people who survived longer were more
17 miserable. And you can make your choice.

18 But you have to have the evidence there in
19 the first place.

20 DR. EPSTEIN: Steve, what are the parts
21 that you focus on that are most patient-centered?

22 DR. GOODMAN: I would say the question

1 itself. I mean, that's really where the patient-
2 centeredness, the choice of outcomes, the choice of
3 the condition, the choice of the comparators, the
4 setting. That's where I think the patient-
5 centeredness most comes in.

6 I would say what follows is, you know, is
7 certainly ethical dimensions. The heterogeneity is
8 a big place in the sense that you get as close as
9 possible to sub-groups that might have differential
10 response or meaningfully differential response.
11 Other folks can maybe see other dimensions for it.

12 But I think the question itself is 90
13 percent of the game. And then, the kinds of things
14 that you measure about people, which goes into some
15 of the outcomes, that allows you to separate them
16 into sub-groups that allow for meaningful
17 comparisons when they, in fact, exist -- or
18 differences, would be the other place. Or perhaps
19 you or others could add to that.

20 DR. GABRIEL: Rick, and then Harlan W.

21 DR. KUNTZ: Well, first of all, it's
22 really great you're taking on this amazing task.

1 And I know that the Translation Table has been
2 somewhat ambiguous in trying to put your handle
3 around it and to many it's kind of a Rosetta Stone
4 of the Nth degree. Do you envision this as
5 actually a stress test device that you would apply
6 to original research that's proposed? Or is this
7 actually a device that provides a range of
8 methodologies for a question that's asked?

9 DR. GOODMAN: It -- well, measuring my
10 stress?

11 So, I see it playing both roles. And
12 actually we very actively discussed it this
13 morning. Is this -- can this be used to define --
14 what's more important? Defining the best design,
15 defining the unacceptable designs, ranking the
16 designs? I mean, in a sense there's no ranking,
17 it's difficult to rank designs in the same reasons
18 that it's difficult to choose best treatments for
19 everybody.

20 What's most important to you will
21 determine what of several design choices you might
22 choose. But what's more important for the PCORI is

1 those designs that really, and this feeds into what
2 David was talking about, are very unlikely to yield
3 meaningful information that's claimed in here. You
4 know, there are many, many studies of diagnostic
5 tests that don't even come close to anything
6 resembling patient outcomes. Or, of registry
7 studies, registries are often put out there as an
8 easy answer to many questions. But in fact, the
9 range of questions they can answer is very, very
10 limited.

11 I would also include issues, you know,
12 regarding the data availability. If the
13 information is simply not there, a claim, you know,
14 no matter how big your sample size is when you're
15 looking at all the claims in Tennessee in a 10-year
16 period, if the outcomes are not measured properly
17 or the relevant patient characteristics are not
18 there, it's a useless study. It doesn't matter if
19 it's 10,000 or 10,000,000.

20 So, helping define what are the -- in a
21 sense, the best studies, to answer your question.
22 Now you may not need the best, by the way. You

1 know, given what -- how much you need in any given
2 situation you may just need enough. And what may
3 be much more important than the best is getting
4 enough to make decisions in the next six months.
5 That's plausible at acceptable costs.

6 So, I would say it could play both roles,
7 and this could be advisory both to reviewers, to
8 researchers, and, you know, it will be a work in
9 progress. Because obviously this is -- this sort
10 of captures all of science. And we'll do as much
11 as we can by May and then we'll do more after that.

12 DR. GABRIEL: So, Harlan W. and then Bob
13 and then we need to go on to Mark.

14 DR. WEISMAN: So the question was whether
15 you want to go to the last slide or because I can
16 defer my question to the end.

17 DR. GABRIEL: So, the last slide is simply
18 a timeline or a next steps. And really, I think,
19 you know, each of these groups kind of identified a
20 question for the Board. But you're already
21 answering, you're hitting on the question that we
22 were going to present.

1 DR. GOODMAN: Yeah. What I should do, is
2 just the lower part of this slide, I'll just read
3 through it. So, what should you expect to see for
4 these methods or standards documents? That's
5 actually a very different product here.

6 So we're developing a prototype for a
7 document that first of all talks about the method.
8 It talks about the key sources that we extracted or
9 are going to develop recommendations from. What
10 those recommendations are, our own commentary on
11 it, particularly looking at it through a patient-
12 centered lens, published examples of best
13 practices, and other tools for researchers.

14 So, we see this definitely as a
15 communication tool to the research community saying
16 not go read that book but, you know, here are the
17 published standards that you should adhere to or
18 try to aspire to if you're going to submit a study
19 to PCORI.

20 One other area where we discussed this
21 morning is on -- is the area of where we could take
22 leadership of reproducible research. That is,

1 there's lots and lots of discussion about the
2 extent to which scientific results are reliable,
3 and there's already a pretty mature conversation in
4 the research community about making the methods as
5 accessible as possible so we can issue the current
6 state of the art in how scientists who submit to
7 PCORI can make their methods as transparent as
8 possible so they can be subject to meaningful
9 either analysis or scrutiny. So that would be an
10 example of one of many methods.

11 Again, we're not going to address the
12 entire landscape by May, but we'll choose what we
13 think are some of the big ticket items that cut
14 across many, many methodologies. And then, we'll
15 move on from there.

16 DR. GABRIEL: Harlan?

17 DR. WEISMAN: I just think, Steve, that
18 this, and the work that you're doing, is incredibly
19 important and I'm just going to concentrate on the
20 health informatics piece of it. And you've already
21 alluded to the fact there's a lot of stuff going on
22 and the EMR and EHR-type work.

1 There are a number of efforts under way
2 today. One of them is OMOP, which is the
3 Observation Medical Outcomes Partnership, which NIH
4 is doing and they're doing their thing.

5 UNIDENTIFIED SPEAKER: [Off microphone.]

6 DR. GOODMAN: Yes, at NIH. Yeah.

7 DR. WEISMAN: And FDA's Med EPINet, which
8 is the medical device version of it, is just
9 getting underway.

10 There's the whole meaningful use issue
11 that CMS has underway with, nobody quite knows how
12 to use this stuff, but you by 2014, I think it is,
13 we have to show that they're meaningfully being
14 used in practice. And I think this work is going
15 to be incredibly important, because right now it's
16 a world of chaos.

17 And I also think it's going to be
18 important not just for PCORI but just in general as
19 a place where PCORI can work in terms of helping
20 issue standards or at least guidelines or some
21 trusted source for how to do this work in all sorts
22 of ways. One of which is, you know, the business

1 that I'm involved with and Rick is involved in and
2 that's in medical innovation, because one of the
3 questions -- by definition, something new has less
4 known about it than things that are established.
5 And that will always be true.

6 So, what is it that we need to know before
7 something that's really, has the potential to be
8 meaningful, and has standard efficacy and safety
9 information available? What are the competence
10 intervals around -- have to be, before you let it
11 out in the real world? But then, how do you go on
12 and learn about it and continue to learn as you go
13 about its profile? And where it works and where it
14 doesn't work, and what are the situations that are
15 most important? And today, there are all types of
16 efforts underway to try to understand that. But
17 none of them are successful and there's a lot of
18 frustration around this whole issue of introduction
19 of new treatments or new diagnostics when existing
20 ones are around. But how you study it in the real
21 world, which is always the remaining question. No
22 matter how many patients you studied before a new

1 therapy gets out there, you still are left with
2 what happens in the real world? And I think these
3 approaches are to be incredibly important.

4 And it sounds like you're already tapping
5 into all these other ongoing efforts.

6 DR. GOODMAN: We're trying to capture them
7 all and figure out what role.

8 DR. WEISMAN: And who from Deloitte is?

9 DR. GOODMAN: Reneisha Watson [phonetic]
10 and Howard -- what's his last name?

11 OVERLAPPING SPEAKERS: [Off microphone.]

12 DR. GOODMAN: What? Oh, sorry, yes.

13 DR. GABRIEL: Would it be okay if we went
14 to Bob and you could try and manage both questions,
15 respond to both together? I'm just a little
16 worried about time.

17 DR. GOODMAN: Yeah, yeah, yeah.

18 DR. WEISMAN: Go ahead.

19 DR. ZWOLAK: Bob Zwolak. My question is
20 actually somewhat like Harlan's but vastly more
21 simple.

22 DR. GOODMAN: Those are the most dangerous

1 ones.

2 DR. ZWOLAK: And it does involve, in fact,
3 Informatics and the EMR. We seem -- the country
4 seems to be coalescing around maybe half a dozen
5 major EMRs. And my impression is that if we can
6 harness the data collecting capability of those
7 EMRs we could develop very rapidly the kind of data
8 that I think Harlan and I both think is needed and
9 especially potentially with ICD-10 on the way for
10 more granularity.

11 But there seem to be proprietary and
12 fiscal blockers out there, potentially to the use
13 of these EMRs. Have you looked into that or do you
14 plan to look into that?

15 DR. GOODMAN: Well, that's one of the four
16 or five topics that was proposed as a major and
17 potential focus for the workshop. So that's
18 certainly on the table. And to the extent it
19 affects functionality, it has to be on the table
20 because -- so, yes.

21 DR. GABRIEL: Okay. Well, thank you, this
22 was a terrific discussion across all three work

1 groups. And just to thank again the three work
2 group leads and all of the members for their very
3 hard work. I think you've seen the progression and
4 the maturity and the evolution of our work.

5 I had mentioned, I think I mentioned more
6 than once that -- I think we'll hold off. I think
7 I mentioned more than once that the Assimilation
8 Group really pulls information together real-time
9 and tries to knit it together into a story, into
10 the report. And Mark has been doing that even as
11 we've been chatting here. And is preparing, has
12 prepared his remarks just to kind of be shared with
13 the group verbally and to get your reactions.

14 So, Mark?

15 DR. HELFAND: Yeah. Since I don't have
16 slides I can't show the pictures. But you've
17 already seen them because we're each a liaison to a
18 different group that's already been shown. And so,
19 Al Berg and Dave Flum and I are the members of the
20 Reporting -- oh, we've got it. Actually you got a
21 slide for that. Okay, never mind. All right.
22 That's my whole slideshow. Okay.

1 So we're going to return back to the
2 overview level about what this Methodology Report
3 or the May 2012 Methodology Report is going to do,
4 and rather than the detailed level we've just gone
5 through. And recall that our group, as Sherine has
6 said both at this meeting and the previous meeting,
7 is to resolve overlap issues between the other work
8 groups and knit the pieces together, identifying
9 and making sure we cover the ground we want to
10 cover in the May 2012 report and later.

11 And part of that, as you know, part of
12 that effort of making sure we cover what we need to
13 cover and the first, in the May 2012 report is to
14 get and use input from Board members regarding the
15 report, as we've done over the last few weeks.

16 And I have to say if you -- you know, from
17 the discussion today we've -- I'd say I don't think
18 we can take any credit for it in our work group but
19 there's been a lot of resolving overlap issues and
20 seeing how these things fit together that has just
21 happened with the three work groups. I don't, you
22 know, what credit we deserve but it makes our job a

1 little easier.

2 Okay, so I don't think we deserve any
3 credit. I don't think we deserve any credit.

4 UNIDENTIFIED SPEAKER: [off microphone.]

5 [Laughter.]

6 DR. HELFAND: Let's lead up to the May
7 2012 report and what the, you know, what the scope
8 of that is. So as has been said before,
9 Methodology Committee's sort of, you know, real
10 obligation here is to produce a report that will
11 include a Translation Table which you just heard
12 explained, some recommended standards, and
13 recommended actions deemed necessary to comply with
14 the standards.

15 So, let's pull back as Dr. Selby said
16 earlier this morning. PCORI needs to do research.
17 And a patient-centered question is the starting
18 point for that research.

19 And Ethan as well as public commenters and
20 Board members have said, Ethan and his example of
21 nausea related to chemotherapy. That sometimes as
22 a patient or family member or a practitioner, we

1 learn that the patient-centered outcomes are
2 unknown. Or, the only information about them is
3 incomplete or even biased sometimes. And in this
4 situation, disseminating the information we already
5 have isn't enough. But neither is doing -- just
6 doing more research. And to be useful, that
7 research needs to be on target for you, and it
8 needs to be carried out in a credible, trustworthy,
9 timely way.

10 And this is what we mean by putting the
11 research questions through the PCORI lens. Getting
12 the questions right and judging their importance on
13 the basis of their value to patients is part of the
14 mission of PCORI, and also part of the methods for
15 Patient-Centered Outcomes Research.

16 So the Methodology Committee's main job is
17 to ensure that PCORI and, we hope, other research
18 organizations, answer patient-centered questions in
19 the best ways possible. And as you've seen,
20 especially with Ethan's group, we're looking at
21 ways to get the questions right from a patient-
22 centered viewpoint and from Steve's group at ways

1 to answer the questions choosing among reasonable
2 options for getting the research data, for
3 designing the studies, and for analyzing and
4 reporting the results.

5 Now an important aspect of this is that
6 the more new and different and patient-centered the
7 questions are, the greater the need to take care
8 that the way we answer them, the methods we use,
9 are fair, practical, and reproducible. Often we'll
10 find there are solid and good innovative ways to do
11 that. And other times, we'll find there aren't.

12 So the other big part of our job is to
13 identify these situations and recommend steps to
14 improve our infrastructure and techniques, which is
15 a long-term and ongoing program.

16 So if you look at the Methodology Report
17 for May 2012, it will lay out the rationale for a
18 Methods Report. And what we hope is that it will
19 bring us from looking at questions and prioritizing
20 questions through the patient-centered lens of
21 PCORI to standards for how to conduct research to
22 answer them.

1 As a first installment, it's intended to
2 enable PCORI to take the first steps to establish
3 and carry out the Research Agenda as PCORI is
4 required to do. And today, which I was very
5 pleased to hear all the discussion about ways to do
6 that once that is sort of set. That the standards
7 are a step for PCORI to write its funding
8 announcements, evaluate proposals, reevaluate
9 research that's underway, and perhaps affect how we
10 look at the reports of that research.

11 A lot of the discussion today has been
12 about, well how do we do that? What's the concrete
13 way? Does this go into criteria that researchers
14 who are submitting proposals have to address? And
15 all these things are something that I have to say,
16 while I'm very happy to hear that that was such a
17 big part of the discussion today because it means
18 that between now and May, perhaps in this report
19 that's aimed at this goal, getting started, we
20 would get sort of a richer follow up for the how to
21 do these things. How to implement -- [microphone
22 turns off] -- rather than having to do that

1 sequentially, have the report come down in May and
2 then start thinking about that.

3 So, I was very pleased with the way things
4 knitted together today. And I'll stop there.

5 DR. GABRIEL: Okay. And I actually have
6 three more slides, but we'd be happy to -- if there
7 are questions now or we could finish. But really,
8 the issue related to the Report Assimilation Group
9 is how can we continue the conversation that we
10 started with the Board that Mark started and led
11 with the Board with those two conference calls,
12 which have been you know, once again very helpful
13 and very eye-opening in many ways. And we don't
14 want to stop there; we want that to be a first
15 step.

16 Okay, I'll finish up. Okay, wrap up.
17 You'll be happy to hear.

18 So, just to give you a sense of how much
19 interest there has been in the solicitations for
20 these contracts that we're looking to fund. We've
21 had a total of 62 letters of intent received.
22 That's kind of good news and bad news, since we

1 have to review the resulting proposals that come
2 in. Maybe not all 62 will end up submitting
3 proposals, but that's very encouraging.

4 What you see there in the list of
5 questions is that we've also received quite a
6 number of questions and comments about the
7 solicitations that will actually help us the next
8 time we go out and solicit this kind of work. So
9 again, the kind of continuous improvement notion
10 that seems to be part of everything we do.

11 The other comment that I would make here
12 is when we look at the list and we're kind of
13 keeping it confidential for the moment. But when
14 we look at the list of individuals and groups who
15 submitted letters of intent, it's really not the
16 usual suspects, which is reassuring. We're getting
17 a much broader community of respondents, if you
18 will, from different organizations. It's not what
19 you would expect, I don't think, in response to an
20 NIH solicitation. So we see that actually as a
21 positive, credible, but not the usual suspects
22 types of respondents. But, more to come on those.

1 The other thing I need to do, and
2 actually, Sharon-Lise is going to comment on this,
3 is the first response for proposals are due for
4 these, again, contracts not grants. But the first
5 of these is due to arrive September 30th. That's
6 the deadline. Obviously prior to that time we need
7 to have in place a review process and a set of
8 principles that guides that process that we can
9 look to. And I'll just ask Sharon-Lise to go
10 through the slide, and then we're done, almost.

11 DR. NORMAND: So, thank you very much. So
12 as Sherine indicated, we wanted to make sure as the
13 Methodology Committee that we had our process down
14 before we actually saw anything in terms of
15 receiving the actual proposals, which are
16 contracts.

17 And so, we have envisioned a four-step
18 process. The first is an administrative review.
19 And by that, we are hoping that the PCORI staff
20 would look to make sure that it was sort of the
21 right response that the page requirements, all that
22 kind of stuff made sense, but importantly, also

1 identified conflicts of interest for the members of
2 the Methodology Committee. And so, to make sure
3 that that happens, so that's the first step.

4 And once the conflict of interests are
5 identified, then it would go to a content review.
6 And by content review, that would mean it would be
7 directed towards the working group that actually
8 put together that solicitation. That working group
9 would be supplemented with other Methodology
10 Committee members, to the extent possible because
11 we need more heads than that are involved in each
12 working group. And that working group would sort
13 of ensure that the content is aligned with the
14 spirit of the particular solicitation that was
15 submitted.

16 And then, it would actually go to the full
17 Methodology Committee for a full review. And so,
18 again, absent those people who have a conflict of
19 interest -- and so, these particular contract
20 responses would be reviewed by the full committee,
21 again, to sort of assess as a group whether or not
22 they're meeting the needs as the Methodology

1 Committee sees it.

2 We anticipate this being very timely in
3 terms of our entire review process. That is, the
4 PCORI staff, make sure that they're aligned with
5 the usual rules. We identify the conflicts of
6 interests. The content review is undertaken by the
7 working group, supplemented with some Methodology
8 Committee members. Then it goes for a full
9 Methodology Committee review.

10 And then, we will make some
11 recommendations that then will go to Dr. Selby.
12 And really, it's Dr. Selby's call in terms of who
13 the particular contracts get awarded to.

14 And again, we're really adamant that we
15 need to have this all written out and sketched out
16 before we see anything. Right now we only know the
17 Letter of Intent. We actually are blinded to sort
18 of, you know, we don't see any of these things. We
19 will not see any particular proposal without sort
20 of going through this process.

21 And so, that's a brief process that we've
22 been thinking about, have discussed, and one that

1 we think is a reasonable one to make sure that
2 we're on our timeline.

3 DR. GABRIEL: And again, we're hoping to
4 do all of this probably in two weeks. Applicants
5 are notified two weeks after submission.

6 This is my last slide, and it's really
7 just a reminder of the timelines. And you've now
8 heard detail about all of those green boxes. And
9 so just to give you a sense, again, of where we're
10 headed and what we're doing.

11 And so, I'll stop there. And if there are
12 questions, particularly regarding Mark's comments
13 or really anything, we'd be glad to entertain them
14 at this point.

15 [Applause.]

16 VICE CHAIRMAN LIPSTEIN: Yeah, Gene, I was
17 --

18 CHAIRMAN WASHINGTON: Sherine's still in
19 charge.

20 VICE CHAIRMAN LIPSTEIN: Sherine, I was
21 just going to say, Sharon and I were commenting.
22 If you all are as smart as you sound, we are truly

1 blessed.

2 [Laughter.]

3 VICE CHAIRMAN LIPSTEIN: I mean, this is
4 just an incredible amount of work. And it just
5 highlights the potential that we have if we're able
6 to employ all this work in setting priorities and
7 establishing a Research Agenda. So, thank you.

8 DR. GABRIEL: Thank you.

9 CHAIRMAN WASHINGTON: Steve is already
10 making my summary comments. But I will just add on
11 to that. It's not just an incredible amount of
12 work. I mean, it's beautiful. And it represents
13 just terrific progress. And it also shows what
14 happens when you really focus because you've got a
15 real deadline looming on the horizon.

16 And, you know, actually I'm looking at
17 Sharon as I'm hearing this because I'm already
18 thinking, wow. We should, today, be planning the
19 dissemination effort around all of this. And it's
20 not just a report, it's the findings, it's the
21 recommendations. There's, to me, this would
22 represent a significant contribution not just to

1 the PCORI -- I keep reminding us, this report is
2 for the nation as it relates to methods. So, thank
3 you.

4 And, you know, I wanted to stand up and
5 applaud, but I said, oh, we don't applaud at PCORI
6 Board meetings, but you've already done that.
7 Because I felt like I was watching a performance of
8 the L.A. Philharmonic. So, Sherine, your new name
9 is Dudamel because you've been orchestrating. And
10 I've got to come up with a name for Sharon-Lise,
11 but I'm working on that and I'll have one by
12 tonight.

13 DR. NORMAND: You know, what I wanted to
14 say, and I know Sherine is dying to ask Gail, but
15 we've got all of our Methodology Committee members
16 behind us. And I don't want anybody to think it's
17 just us sitting up here.

18 [Applause.]

19 DR. GABRIEL: So Gail, do you have a
20 question?

21 DR. HUNT: Yeah. Sharon-Lise, could you
22 just really briefly, what's the distinction between

1 the content review and the programmatic review that
2 is the committee? And then the whole, I mean, is
3 the sub-group and then the whole committee.

4 And also, isn't this January 2012 workshop
5 or summit that you guys are going to hold on
6 methods, isn't that really a way of sort of
7 showcasing the outcome of what you all are doing on
8 a national level?

9 DR. NORMAND: Well, I think there's
10 several, so let me answer the first question first.

11 So, the difference between the content
12 review and the full Methodology Committee review.
13 The first is really to -- for the working group to
14 really, for them, because they've been working
15 about it, thinking about it, breathing it, and
16 saying you know, these really make sense. And
17 they're actually going to come up with some
18 preliminary scoring system. Think of it that way.
19 And they're going to come back and say we had 20
20 solicitations, 20 responses on this. We think that
21 these five make it. And so, that's their job, is
22 to really -- because they wrote the solicitation.

1 They really need to review that.

2 The programmatic review is really for all
3 of the proposals that come in. That we can
4 actually select them as a full group to say, well
5 is it really -- are these meeting all our needs.
6 And maybe there was something that came in that
7 perhaps the working group felt, it's not really
8 responsive to this. But it may be that when the
9 full Methodology Committee sees it, we're going to
10 say you know what? That's actually going to fill a
11 hole.

12 I think that's what we're thinking, but I
13 would like to ask Sherine, is that?

14 DR. GABRIEL: For those of you who are
15 familiar with NIH, it's kind of study section
16 counsel-like. And we might make different choices
17 looking at the whole collection of proposals across
18 all of the work groups, given the broad program,
19 the Methodology Report that we're trying to
20 address.

21 So that's the best I could do. And in
22 terms of workshop, I think you're exactly right.

1 That would be the goal of the workshop. I mean,
2 the workshop. And you've heard two or three
3 different workshops being proposed. We haven't
4 exactly decided is this going to be one big one or,
5 you know, maybe, you know, holding three separate
6 workshops may not be as efficient. And so, we
7 haven't worked through those details yet.

8 DR. NORMAND: But they are focused on --
9 they are really targeted workshops on specific
10 topics. For example, Dr. Meltzer's talking about
11 sort of convening all of the researchers that are
12 responding to research prioritization methods. And
13 so in some sense, you know, they're very targeted
14 on the one hand. On the other hand it would
15 benefit everybody. So we're trying to balance time
16 and topics.

17 DR. GABRIEL: Right. They have to serve
18 our needs in terms of answering the questions and
19 bringing the expertise that we need to bring to
20 bear on for writing the report, the goals of the
21 report. Christine?

22 DR. GOERTZ: Christine Goertz. Sherine,

1 how many applications are you planning to fund in
2 each of these categories? Because I guess I've
3 been assuming all along that it would be just one.
4 But now listening to this conversation I'm just
5 wondering if it might not be several. And if there
6 are some idea of how many applications you would be
7 thinking about funding.

8 DR. GABRIEL: So I think that, I'll look
9 at my colleagues here, but I think the short answer
10 is that we don't know yet. Because it really
11 depends on what we get and the extent to which they
12 kind of fulfill our needs.

13 We also have -- because we are just very
14 narrowly focused on certain objectives, you know,
15 again for the report. So we may end up not funding
16 any. So it's very different. You know, if it just
17 doesn't hit the mark and actually relying on our
18 interim researchers or relying on staff to really
19 fill in the holes that we need. So we hope that
20 they'll be responsive enough that we'll be able to
21 fund a small number and they'll give us the
22 information we need.

1 Anything -- anybody want to add to that?

2 CHAIRMAN WASHINGTON: Could I just ask any
3 of the statisticians, I got in trouble last night
4 about high-end statisticians --

5 OVERLAPPING SPEAKER: [Off microphone.]

6 [Laughter.]

7 CHAIRMAN WASHINGTON: No, no. I already
8 know what the answer is. At least, I hope I know
9 what the answer is.

10 What's the chances that we won't fund any
11 project?

12 DR. GABRIEL: It's non-zero. There's
13 always a chance. So, it's non-zero.

14 CHAIRMAN WASHINGTON: Okay. But the point
15 is, those who are listening, we intend to fund a
16 project. So, we don't, in anyway want to convey to
17 anybody that PCORI on a first run is going to have
18 a zero funding rate.

19 DR. GABRIEL: I stand corrected. I think
20 it's very unlikely, but it isn't zero.

21 [Off microphone discussion.]

22 UNIDENTIFIED SPEAKER: Just say zero.

1 [Laughter.]

2 [Off microphone discussion.]

3 CHAIRMAN WASHINGTON: Thank you very much
4 for coming here.

5 [Applause.]

6 CHAIRMAN WASHINGTON: Okay. And on that
7 note, I'll just remind everyone that we do have the
8 stakeholder engagement dinner, not dinner, rather
9 event this afternoon starting at 7:00. And it is
10 here, right?

11 UNIDENTIFIED SPEAKER: Yes.

12 CHAIRMAN WASHINGTON: Yeah. So anyone
13 that's in attendance, everyone, in fact, is invited
14 and encouraged to stay. And otherwise I'll see my
15 colleagues first thing in the morning. Joe, did
16 you have a comment or remark? Otherwise we are --
17 what's the word I'm looking for?

18 UNIDENTIFIED SPEAKER: Adjourned.

19 CHAIRMAN WASHINGTON: We are adjourned for
20 today. Thank you.

21 [Whereupon, the PCORI Board of Governors
22 meeting was concluded.]
